when is algebra 2 regents: Disabling the School-to-Prison Pipeline Laura Vernikoff, 2021-05-11 Young people who have received special education services in the United States are vastly overrepresented in juvenile and adult criminal justice systems relative to their numbers in the general population. Although much existing research blames individual kids for getting arrested, school-level policies and practices affect a variety of student outcomes, including involvement with the justice system. These school-level policies and practices can—and should—be altered by teachers, administrators, and policy makers to reduce the number of young people getting arrested. Disabling the School-to-Prison Pipeline uses administrative data from New York City public schools and interviews with young people who have received special education services in NYC public schools and been arrested to better understand how schools can help or harm students receiving special education services. Schools cannot fix all problems associated with the criminal justice system in the United States; however, we can certainly expect schools not to make existing problems worse. This book identifies school-level policies and practices that may lead to negative outcomes for students, such as getting arrested, and suggests alternatives.

The notion of "research to practice" is critical to validating how effectively PCK works within the clinic and how it can be used to improve STEM learning. As the need for more effective educational approaches in STEM grows, the importance of developing, identifying, and validating effective practices and practitioner competencies are needed. This book covers a wide range of topics in PCK in different school levels (middle school, college teacher training, teacher professional development), and different environments (museums, rural). The contributors believe that vital to successful STEM education practice is recognition that STEM domains require both specialized domain knowledge as well as specialized pedagogical approaches. The authors of this work were chosen because of their extensive fieldwork in PCK research and practice, making this volume valuable to furthering how PCK is used to enlighten the understanding of learning, as well as providing practical instruction.
