when are algebra 1 regents: Disabling the School-to-Prison Pipeline Laura Vernikoff, 2021-05-11 Young people who have received special education services in the United States are vastly overrepresented in juvenile and adult criminal justice systems relative to their numbers in the general population. Although much existing research blames individual kids for getting arrested, school-level policies and practices affect a variety of student outcomes, including involvement with the justice system. These school-level policies and practices can—and should—be altered by teachers, administrators, and policy makers to reduce the number of young people getting arrested. Disabling the School-to-Prison Pipeline uses administrative data from New York City public schools and interviews with young people who have received special education services in NYC public schools and been arrested to better understand how schools can help or harm students receiving special education services. Schools cannot fix all problems associated with the criminal justice system in the United States; however, we can certainly expect schools not to make existing problems worse. This book identifies school-level policies and practices that may lead to negative outcomes for students, such as getting arrested, and suggests alternatives.

Volume 2 Claudia Patricia Chapa Tamez, 2014-01-14 Since mathematical principles have remained the same all throughout the world for centuries, Mathematics has been considered by many the “universal language of numbers”. For some, Mathematics causes anxiety or fear because it seems difficult to understand. One of the objectives of this eBook is to make the material more visually, technologically and multiculturally attractive, with the aid of videos, pictures, games, animations and interactive exercises so that Mathematics can become more interesting and accessible for today’s worldwide students since “evidence is mounting to support technology advocates’ claims that 21st-century information and communication tools, as well as more traditional computer-assisted instructional applications, can positively influence student learning processes and outcomes (Cradler, 2002)”. The role of mathematics in our modern world is crucial for today’s global communication and for a multitude of scientific and technological applications and advances.
