anatomy of lies episodes: *The Rise of Office Literature* Daniel Jenkin-Smith, 2025-03-20 Explores the social and cultural history of bureaucratization in 19th-century Britain and France via the evolving literary portrayal of office life. Literary critics have long cited the clerk in 19th-century literature as an emblem of a nascent lower middle class, or of shifting gender roles in the world of work. Moreover, there is growing critical interest in the influence of rapidly evolving organizational systems and data networks on this period's culture. By refocusing on the point at which these

interests meet – the office – The Rise of Office Literature plays a synthesizing role, identifying this workplace as a point of convergence between the abstract and the quotidian, between structures and workers. By exploring the history of 'office literature' – a 'forgotten' nineteenth-century literary genre whose exemplars focus primarily on office life – Daniel Jenkin-Smith argues that the portrayal of new labour practices, intellectual forms and bureaucratic technologies in English and French literature served to problematize existing narrative conventions, while also enabling new developments in literary aesthetics. Office literature's unique position – between the ongoing process of nineteenth-century bureaucratization and the rapidly evolving realist and satirical traditions of this period's literature – means that it offers an especially insightful perspective onto the interrelation of aesthetic, intellectual, economic and social history.

anatomy of lies episodes: *Laparoscopic Surgery* R.M. Olson, Ronald C. Merrell, 2012-12-06 In May 1997 the Faculty of Surgery from the University of Athens and elsewhere gathered with colleagues in Athens for the third time in 6 years to continue our discussions on the progress, problems, realization, and future of laproscopic surgery. The topics were rather inclusive with regard to the issues that defined the field, and the assembled investigators, educators, and clinicians brought a rich experience and clear vision of the field in the coming years. The decision had been made months before to collect our thoughts and experience as a colloquium of the state of laproscopic surgery in the tenth year following the report of Mouret on laparoscopic cholecystectomy, not as the proceedings of the specific meeting. At the end of a decade of mercurial advance, heated debate, professional turmoil, and very little science, it was clear that general surgery would never be the same. Laproscopic surgery is now fully established and requires accommodation in the curriculum, practice, and research of surgery for the foreseeable future. This book is called a colloquium on laparoscopy because it collects the thoughts of many workers in the form of consensus presentations. It is offered to any surgeon who is ready to survey this field with clear eyes, absent of emotion or hyperbole, in our evolution of a better standard of care for surgical patients.
