anatomy of lies season 1 episode 1: Abortion in Popular Culture Brenda Boudreau, Kelli Maloy, 2023-04-04 Abortion in Popular Culture: A Call to Action brings together scholars who examine depictions of abortion in film, television, literature, and social media. By examining texts ranging from classic television series such as Maude and Roseanne and recent films such as Never Rarely Sometimes Always and Unpregnant to dystopian novels and social-media campaigns, the essays analyze narrative styles, rhetorical strategies, and cinematic techniques, all of which shape cultural attitudes toward abortion. They also analyze cultural shifts, including the willingness or reluctance of networks, cable channels, and filmmakers to acknowledge changing trends in reproductive health such as medication abortion and the role that abortion plays in family planning. As a whole, however, the essays argue that popular culture can play a significant role in destigmatizing abortion by including a wider range of narratives and doing so with nuance and empathy. With reproductive rights under attack in the United States, each essay is a call to action for writers, producers, directors, showrunners, authors, and musicians to use their platforms to tell more positive and accurate stories about abortion.

anatomy of lies season 1 episode 1: The Value Gap Courtney Brannon Donoghue, 2023-08-08 How female directors, producers, and writers navigate the challenges and barriers facing female-driven projects at each stage of filmmaking in contemporary Hollywood. Conversations about gender equity in the workplace accelerated in the 2010s, with debates inside Hollywood specifically pointing to broader systemic problems of employment disparities and exploitative labor practices. Compounded by the devastating #MeToo revelations, these problems led to a wide-scale call for change. The Value Gap traces female-driven filmmaking across development, financing,

production, film festivals, marketing, and distribution, examining the realities facing women working in the industry during this transformative moment. Drawing from five years of extensive interviews with female producers, writers, and directors at different stages of their careers, Courtney Brannon Donoghue examines how Hollywood business cultures “value” female-driven projects as risky or not bankable. Industry claims that “movies targeting female audiences don’t make money” or “women can’t direct big-budget blockbusters” have long circulated to rationalize systemic gender inequities and have served to normalize studios prioritizing the white male-driven status quo. Through a critical media industry studies lens, *The Value Gap* challenges this pervasive logic with firsthand accounts of women actively navigating the male-dominated and conglomerate-owned industrial landscape.

anatomy of lies season 1 episode 1: *Volcano and Geothermal Tourism* Patricia Erfurt-Cooper, Malcolm Cooper, 2010-08-12 There are over 1300 active volcanoes worldwide and many more dormant or extinct. Some are developed as tourist destinations; others are not, but have great potential. Mount Fuji in Japan attracts over 100 million visitors per year and has immense cultural and spiritual significance, while a number of volcanic areas in national parks, for example Teide in

In the last decade the designation of nearly 50 geoparks around the world has highlighted their potential for tourism development. This book provides the first global review and assessment of the sustainable use of active and dormant volcanic and geothermal environments for geotourism. The volcano-based tourism sector is further augmented through a closely linked range of geothermal resources and attractions, such as geysers and hot springs, which are discussed in detail throughout individual chapters covering all key volcanic and geothermal regions around the world. It is shown that volcano and geothermal tourism is a subsection of nature-based geotourism and incorporates a variety of other tourism categories such as adventure tourism, extreme tourism, ecotourism, green tourism, educational tourism, and hot spring tourism. anatomy of lies season 1 episode 1: The Rise of the Anti-Heroine in TV's Third Golden Age Margaret Tally, 2016-09-23 This volume offers a stimulating perspective on the status of representations of a new kind of female character who emerged on the scene on US television in the mid-2000s, that of the anti-heroine. This new figure rivaled her earlier counterpart, the anti-hero, in terms of her complexity, and was multi-layered and morally flawed. Looking at the cable channels Showtime and HBO, as well as Netflix and ABC Television, this volume examines a range of recent television women and shows, including *Homeland*, *Weeds*, *Scandal*, *How to Get Away With Murder*, *Veep*, *Girls*, and *Orange is the New Black* as well as a host of other nighttime programs to demonstrate just how dominant the anti-heroine has become on US television. It examines how the figure has arisen within the larger context of the turn towards "Quality Television", that has itself been viewed as part of the post-network era or the "Third Golden Age" of television where new forms of broadcast delivery have created a marketing incentive to deliver more compelling characters to niche audiences. By including an exploration of the historical circumstances, as well as the industrial context in which the anti-heroine became the dominant leading female character on nighttime television, the book offers a fascinating study that sits at the intersection of gender studies and television. As such, it will appeal to scholars of popular culture, sociology, cultural and media studies.
