anatomy worksheet pdf: Teaching First-Year College Students Maggie Murphy, 2019-05-15 The "first-year experience" is an emerging hot topic in academic libraries, and many librarians who work with first-year students are interested in best practices for engaging and retaining them. Professional discussion and interest groups, conferences, and vendor-sponsored awards for librarians working with first-year students are popping up left and right. A critical aspect of libraries in the first-year experience is effective information literacy instruction for first-year students. Research shows that, despite growing up in a world rife with technology and information, students entering college rarely bring with them the conceptual understandings and critical habits of thinking needed for finding, evaluating, and ethically using information in both academic and real-world contexts. Faculty in upper-level courses expect students to learn about the research process in their first year of college, and instructors in the first-year curriculum expect librarians to teach this to their students. Despite all this, designing, teaching, and evaluating effective information literacy instruction specifically for first-year students is not necessarily intuitive for instruction librarians. That is why Teaching First-Year College Students: A Practical Guide for Librarians is a comprehensive, how-to guide for both new and experienced librarians interested in planning, teaching, and assessing library instruction for first-year students. The book: Examines the related histories of library instruction and first-year experience initiativesSummarizes and synthesizes empirical research and educational theory about first-year students as learners and novice researchers Establishes best practices for engaging first-year students through active learning and inclusive teachingFeatures excerpts from interviews with a number of instruction librarians who work with first-year students in a range of positions and instructional contextsIncludes examples of activities, lesson plans, and assessment ideas for first-year library instruction for common first-year course scenariosIncludes a template to use for library instruction lesson planningWritten by a library instruction coordinator with a graduate degree in First-Year Studies and a first-year instruction librarian, Teaching First-Year College Students: A Practical Guide for Librarians is the first comprehensive, how-to guide for both new and experienced librarians interested in planning, coordinating, teaching, and assessing library instruction for first-vear students.

anatomy worksheet pdf: Assessing for Learning Peggy L. Maki, 2023-07-03 While there is consensus that institutions need to represent their educational effectiveness through documentation of student learning, the higher education community is divided between those who support national standardized tests to compare institutions' educational effectiveness, and those who believe that valid assessment of student achievement is based on assessing the work that students produce along and at the end of their educational journeys. This book espouses the latter philosophy—what Peggy Maki sees as an integrated and authentic approach to providing evidence of student learning based on the work that students produce along the chronology of their learning. She believes that assessment needs to be humanized, as opposed to standardized, to take into account the demographics of institutions, as students do not all start at the same place in their learning. Students also need the tools to assess their own progress. In addition to updating and expanding the contents of her first edition to reflect changes in assessment practices and developments over the last seven years, such as the development of technology-enabled assessment methods and the national need for institutions to demonstrate that they are using results to improve student learning, Maki focuses on ways to deepen program and institution-level assessment within the context of collective inquiry about student learning. Recognizing that assessment is not initially a linear start-up process or even necessarily sequential, and recognizing that institutions develop processes appropriate for their mission and culture, this book does not take a prescriptive or formulaic approach to building this commitment. What it does present is a framework, with examples of processes and strategies, to assist faculty, staff, administrators, and campus leaders to develop a sustainable and shared core institutional process that deepens inquiry into what and how students learn to identify and improve patterns of weakness that inhibit learning. This book is designed to assist colleges and universities build a sustainable commitment to assessing student learning at both the institution and program levels. It provides the tools for collective inquiry among faculty, staff, administrators and students to develop evidence of students' abilities to integrate, apply and transfer learning, as well as to construct their own meaning. Each chapter also concludes with (1) an Additional Resources section that includes references to meta-sites with further resources, so users can pursue particular issues in greater depth and detail and (2) worksheets, guides, and exercises designed to build collaborative ownership of assessment. The second edition now covers: * Strategies to connect students to an institution's or a program's assessment commitment* Description of the components of a comprehensive institutional commitment that engages the institution, educators, and students--all as learners* Expanded coverage of direct and indirect assessment methods, including technology-enabled methods that engage students in the process* New case studies and campus examples covering undergraduate, graduate education, and the co-curriculum* New chapter with case studies that presents a framework for a backward designed problem-based assessment process, anchored in answering open-ended research or study questions that lead to improving pedagogy and educational practices* Integration of developments across professional, scholarly, and accrediting bodies, and disciplinary organizations* Descriptions and illustrations of assessment management systems* Additional examples, exercises, guides and worksheets that align with new content

anatomy worksheet pdf: ePortfolios in Australian Universities Jennifer Rowley, 2016-09-14 This book focuses on essential findings concerning emerging practices of student learning through the teaching and learning benefits of the electronic portfolio (ePortfolio) in a range of disciplines at Australian universities.
