**anatomy shoppe: A Finger in Lincoln's Brain** E. Lawrence Abel, 2015-01-16 This intriguing book examines Lincoln's assassination from a behavioral and medical sciences perspective, providing new insights into everything from ballistics and forensics to the medical intervention to save his life, the autopsy results, his compromised embalming, and the final odyssey of his bodily remains. In this book, E. Lawrence Abel sheds much-needed light on the fascinating details surrounding the death of Abraham Lincoln, including John Wilkes Booth's illness that turned him into an assassin, the medical treatment the president is alleged to have received after he was shot, and the significance of his funeral for the American public. The author provides an in-depth analysis of the science behind the assassination, a discussion of the medical care Lincoln received at the time he was shot and the treatment he would have received if he were shot today, and the impact of his death on his contemporaries and the American public. The book examines Lincoln's fatalism and his unbridled ambition in terms of empirical psychological science rather than the fanciful psychoanalytical explanations that often characterize Lincoln psychohistories. The medical chapters challenge the long-standing description of Lincoln's last hours and examine the debate about whether Lincoln's doctors inadvertently doomed him.

**anatomy shoppe: Rhetoric and Medicine in Early Modern Europe** Nancy S. Struever, 2016-04-08 Through close analysis of texts, cultural and civic communities, and intellectual history, the papers in this collection, for the first time, propose a dynamic relationship between rhetoric and medicine as discourses and disciplines of cure in early modern Europe. Although the range of theoretical approaches and methodologies represented here is diverse, the essays collectively explore the theories and practices, innovations and interventions, that underwrite the shared concerns of medicine, moral philosophy, and rhetoric: care and consolation, reading, policy, and rectitude, signification, selfhood, and autonomy—all developed and refined at the intersection of areas of inquiry usually thought distinct. From Italy to England, from the sixteenth through to the mid-eighteenth century, early modern moral philosophers and essayists, rhetoricians and physicians investigated the passions and persuasion, vulnerability and volubility, theoretical intervention and practical therapy in the dramas, narratives, and disciplines of public and private cure. The essays are relevant to a wide range of readers, including cultural, literary, and intellectual historians, historians of medicine and philosophy, and scholars of rhetoric.
