bachelors in anatomy and physiology online: Adapting to Online and Blended Learning in Higher Education David Kember, Robert A. Ellis, Si Fan, Allison Trimble, 2023-05-19 Higher education has undergone a massive transformation in teaching and learning in a very short period of time since the onset of Covid-19. Students, teachers and universities have had to adopt online and blended learning, often with little or no experience or models of good practice to draw upon. It is clear that blended and online learning are here to stay. This book draws on research from universities that have adopted online and blended learning to facilitate the expansion and diversification of their intake; which resulted in considerable experience and expertise in online and blended teaching. The book describes a model, tested with qualitative and quantitative data, which shows how teachers can support the retention and success of online and blended learners with four high-quality pedagogical elements: bite-sized videos of interest and relevance; learning materials that are well organised and provide a clear learning roadmap; discussion forums which are set up and moderated so as to result in lively student-student and student-teacher interaction; and, online teachers being approachable and responsive to communication with individual students through email, phone and online communication platforms. This model is explained and profusely illustrated with examples from the teaching of award-winning teachers. This book introduces the concept of a spectrum from traditional to contemporary models of admission and course delivery in higher education. It explains how universities which have adopted a contemporary model, with high levels of blended and online learning, have been able to expand their intake and markedly diversify the student body. It discusses how to support the retention and success of online and blended learners. Student support services are examined from the perspectives of service providers and online and blended learners and the case is made for support services being aligned with student needs. The book has a discussion of university management systems which utilise feedback at all levels to improve alignment between support service provision and student needs.

bachelors in anatomy and physiology online: Empowering Teachers for Equitable and Sustainable Education

Maria Teresa Tatto, 2024-04-16 This groundbreaking book uses a comprehensive study of a novel Master of Education program to showcase how teachers can be engaged in authoritative equity-based research, using comparative education theory, inquiry-based pedagogy, and the UNESCO SDGs as powerful frameworks. By developing agency to advance culturally sustaining and humanizing practices, it demonstrates how teachers can promote equity in their classrooms and communities. The central premise of the program is that teachers must become comparative, global, and local action researchers to have agency in their practice and to become effective advocates for the cultural and learning needs of their students, especially those in disadvantaged contexts or “learning at the bottom of the pyramid.” By learning comparative framing and social science methods, reviewing the literature to select verifiable educational research, and developing and implementing a plan for action research, this book offers new ideas for how teachers can effectively respond to recent UNESCO calls to reimagine and create promising futures locally. By providing formative and summative evidence of culturally and socially transformative learning, and showcasing how teacher educators can engage teachers in authoritative justice-inquiry-based research, this book will appeal to scholars, faculty, and researchers of comparative education and teacher education, and development.

bachelors in anatomy and physiology online: Patients at Risk

Niran Al-Agba, Rebekah Bernard, 2020-11-01 Patients at Risk: The Rise of the Nurse Practitioner and Physician Assistant in Healthcare exposes a vast conspiracy of political maneuvering and corporate greed that has led to the replacement of qualified medical professionals by lesser trained practitioners. As corporations seek to save money and government agencies aim to increase constituent access, minimum qualifications for the guardians of our nation’s healthcare continue to decline—with deadly consequences. This is a story that has not yet been told, and one that has dangerous repercussions for all Americans. With the rate of nurse practitioner and physician assistant graduates exceeding that of physician graduates, if you are not already being treated by a non-physician, chances are, you soon will be. While advocates for these professions insist that research shows that they can provide the same care as physicians, patients do not know the whole truth: that there are no credible

scientific studies to support the safety and efficacy of non-physicians practicing without physician supervision. Written by two physicians who have witnessed the decline of medical expertise over the last twenty years, this data-driven book interweaves heart-rending true patient stories with hard data, showing how patients have been sacrificed for profit by the substitution of non-physician practitioners. Adding a dimension neglected by modern healthcare critiques such as *An American Sickness*, this book provides a roadmap for patients to protect themselves from medical harm. WORDS OF PRAISE and REVIEWS Al-Agba and Bernard tell a frightening story that insiders know all too well. As mega corporations push for efficiency and tout consumer focused retail services, American healthcare is being dumbed down to the point of no return. It's a story that many media outlets are missing and one that puts you and your family's health at real risk. --John Irvine, Deductible Media Laced with actual patient cases, the book's data and patterns of large corporations replacing physicians with non-physician practitioners, despite the vast difference in training is enlightening and astounding. The authors' extensively researched book methodically lays out the problems of our changing medical care landscape and solutions to ensure quality care. --Marilyn M. Singleton, MD, JD A masterful job of bringing to light a rapidly growing issue of what should be great concern to all of us: the proliferation of non-physician practitioners that work predominantly inside algorithms rather than applying years of training, clinical knowledge, and experience. Instead of a patient-first mentality, we are increasingly met with the sad statement of Profits Over Patients, echoed by hospitals and health insurance companies. --John M. Chamberlain, MHA, LFACHE, Board Chairman, Citizen Health A must read for patients attempting to navigate today's healthcare marketplace. --Brian Wilhelmi MD, JD, FASA

bachelors in anatomy and physiology online: The MEDEX Northwest Physician Assistant Program Ruth Ballweg MPA PA-C, 2016-02-29 The MEDEX Northwest Physician Assistant Program was created at the University of Washington in 1968 as one of the nation's first physician assistant (PA) programs. A joint project of the Washington State Medical Association and the University of Washington School of Medicine, MEDEX was designed to meet the needs of overworked physicians in rural communities. As envisioned by MEDEX founder Dr. Richard A. Smith, Physician Assistants were created by physicians, for physicians. Initially, all MEDEX students were former military corpsmen returning from Vietnam. Based on their extensive clinical experience, they were well accepted by doctors and their patients. Dr. Richard Smith was a former Peace Corps physician and leader of the federal project to desegregate the US hospital system as a requirement for Medicare reimbursement. Dr. Smith's founding principles for MEDEX included a collaborative model for community and practitioner involvement--the framework for the MEDEX Program throughout its 45-year history.
