constructive anatomy pdf: Body, Migration, Re/constructive Surgeries Gabriele Griffin, Malin Jordal, 2018-10-03 Bringing together an international range of case studies and interviews with individuals who have had genital re/construction, Body, Migration, Re/constructive Surgeries explores the socio-cultural meanings of clitoral re/construction following female genital cutting (FGC), hymen reconstruction, trans and intersex bodily interventions; and cosmetic surgery. Drawing critical attention to how decisions around such surgeries are affected by social, economic and regulatory contexts that change over time and across spaces, it raises questions such as: How are bodies genderized through surgical interventions? How do such interventions express cultural context? How do women who have experienced female genital cutting respond to opportunities for clitoral reconstruction? How do female-to-male (FtM) trans people decide on how and where to undertake body modifications? What roles do cultural expectations and official regulations play in how people decide to have their bodies modified? Suggesting that conventional gender binaries are no longer adequate to understanding the quest for bodily interventions, this insightful volume seeks to give a greater voice to those engaged in gender body modification. It will appeal to students and postdoctoral researchers interested in fields such as Gender Studies, Social Studies, Sexuality Studies and Cultural Studies.

constructive anatomy pdf: The Foundations and Anatomy of Shareholder Activism Iris H-Y Chiu, 2010-10-12 *The Foundations and Anatomy of Shareholder Activism* examines the landscape of contemporary shareholder activism in the UK. The book focuses on minority shareholder activism in publicly listed companies. It argues that contemporary shareholder activism in the UK is dominated by two groups; one, the institutional shareholders whose shareholder activism is largely seen as a driving force for good corporate governance, and two, the hedge funds whose shareholder activism is based on value extraction and exit. The book provides a detailed examination of both types of shareholder activism, and discusses critically the nature of, motivations for and consequences following both types of shareholder activism. The book then locates both types of shareholder activism in the theory of the company and the fabric of company law, and argues that institutional

shareholder activism based on exercising a voice at general meetings is well supported in theory and law. The call for institutions to engage in more informal forms of activism in the name of 'stewardship' may bring about challenges to the current patterns of activism that institutions engage in. The book argues, however, that a more cautious view of hedge fund activism and the pattern of value extraction and exit should be taken. More empirical evidence is likely to be necessary, however, to weigh up the long terms benefits and costs of hedge fund activism.

constructive anatomy pdf: Enhancing Learning through Formative Assessment and Feedback

Alastair Irons, Sam Elkington, 2021-08-25 Assessment is a critical aspect of higher education because it has a range of powerful impacts on what staff and students do and how universities operate. Underpinned by relevant theory and practical advice this fully updated new edition takes into account the changing expectation of students in the context of an increasingly complex and shifting higher education environment to promote the role of formative assessment and formative feedback and its impact on shaping the student learning experience. Key content covers: the theoretical and philosophical aspects of formative assessment and formative feedback; the learning environment in which students undertake their learning activities, helping teachers develop appropriate formative assessment and provide effective formative feedback; the impact of formative assessment and formative feedback activities have on learning, teaching, and assessment design, as well as on the academic workload of tutors; the contemporary issues and challenges currently driving research into formative assessment; the use of technology in formative assessment and how different tools and technologies allow for the provision of effective and efficient formative feedback; the benefits of understanding how students respond to formative assessment and formative feedback as an opportunity to review the effectiveness of the teaching and learning methods and techniques; the integral role of formative assessment and formative feedback plays in postgraduate research settings; and how innovations in formative assessment and feedback inform key developments in large-scale assessment change. Aimed at both experienced and early career practitioners in higher education, this text is ideal reading for educators who wish to see a movement away from a higher education system driven by summative assessment to one where a more holistic approach to education positions learning standards rather than measurement and grades as central to effective assessment and, crucially, to return to a focus on student learners.

constructive anatomy pdf: Peace, Politics, and Religion Jeffrey Haynes, 2020-12-14

Relationships between peace, politics and religion are often controversial, and sometimes problematic. Religion is a core source of identity for billions of people around the world and it is hardly surprising that sometimes it becomes involved in conflicts. At the same time, we can see religion involved not only in conflict. It is also central to conflict resolution, peace-making and peacebuilding. Religious involvement is often necessary to try to end hatred and differences, frequently central to political conflicts especially, but not only, in the Global South. Evidence shows that religious leaders and faith-based organisations can play constructive roles in helping to end violence, and in some cases, build peace via early warnings of conflict, good offices once conflict has erupted, as well as advocacy, mediation and reconciliation. The chapters of this book highlight that religion can encourage both conflict and peace, through the activities of people individually and collectively imbued with religious ideas and ideals.

constructive anatomy pdf: Congress and China Policy Robert G. Sutter, 2023-11-20 Congress and China Policy: Past Episodic, Recent Enduring Influence supports findings that bipartisan majorities in Congress have been instrumental in driving the fundamental shift in American policy toward China carried out during the past six years. Filling major gaps in the inadequate treatment of Congress in assessments of US policy toward China, this book compares recent Congressional influence with the episodes of Congressional activism in China policy over the past 200 years, showing Congress recently has been more important than ever. The findings also show that partisan politics, Congressional-executive competition for policy control, swings in public and media opinion, and influences by special interests—longstanding drivers of past Congressional involvement in China policy—have been of secondary or lesser importance as the Congressional members have grappled with the acute dangers posed by Chinese economic, security and governance challenges. Steady and determined efforts by this cohort of bipartisan Congressional majorities to defend America from Chinese challenges have proven more resolute than the erratic practices of President Trump and previously dismissive Joseph Biden who came late to a tougher policy. This volume forecasts that US policy will remain heavily influenced by these members as they serve out their terms in the years ahead.

constructive anatomy pdf: Why Democracies Need Science Harry Collins, Robert Evans, 2017-03-27 We live in times of increasing public distrust of the main institutions of modern society. Experts, including scientists, are suspected of working to hidden agendas or serving vested interests. The solution is usually seen as more public scrutiny and more control by democratic institutions – experts must be subservient to social and political life. In this book, Harry Collins and Robert Evans take a radically different view. They argue that, rather than democracies needing to be protected from science, democratic societies need to learn how to value science in this new age of uncertainty. By emphasizing that science is a moral enterprise, guided by values that should matter to all, they show how science can support democracy without destroying it and propose a new institution – The Owls – that can mediate between science and society and improve technological decision-making for the benefit of all.
