large anatomy posters: *With Love As Guide* Erato Sahapoglu, 2009-08-04 When her father, Stavros, was stricken by an incurable cancer, Erato wanted to distract him and make his last months as enjoyable as possible. She asked him to evoke his memories for the family and the archives of the Association of the Greeks of Constantinople in tape recorded sessions. Furthermore, to help him through his last voyage on Earth, she wrote an essay for him where she recalled all of her personal experiences as a testimony to life after death and the guidance of divine teachers. To make sure he would read it, she asked him to correct her mistakes. He did, while discussing the essay with her. And it did help him. The essay also helped very sick friends who read it...They said it gave them hope and eradicated their fear of death. Hopefully this book will bring to many expatriated Greeks from their native city fond memories about their life in Istanbul and gatherings in Montreal. And hopefully it will bring solace to many as well.

large anatomy posters: Chronic Conditions Karen Engle, 2023-04-15 Imagine a house whose wiring is spliced and patchy with knob and tube, coiled like a serpent ready to strike and spark at any moment. Even if you have a fire trap behind your walls, the lights will turn on. In her memoir of a life lived in physical pain, Karen Engle asks whether and how language can capture what it's like to be in a body that appears to work from the outside, when its internal systems operate through an ad hoc assemblage of garbled messaging, reroutings, and shaky foundations. A series of narrative reflections capture the myriad ways in which the chronic conditions its suffering subject. Contrary to claims that pain obliterates language - long a trope of writing about illness - Engle contends that the person with chronic pain is not hampered by a scarcity of language, but rather its excess: enervation by the unending waves of utterance. From a history of the word chronic and its shifting significance to meditations on multiple diagnoses and interactions with medical personnel, *Chronic Conditions* is a doctor's case file through the looking glass of a creative writer, scholar, and patient. Engle explores, through medical research, literature, and art, how it feels to become attuned to the rhythms of perpetual and mysterious physical pain. At stake here is the search for a kind of writing that does not instrumentalize pain for allegorical or transcendental purposes. Chronic pain is not a sign of weakness, nor is it an opportunity for personal growth, Engle argues. Instead, it is entirely ordinary and deeply affecting.

large anatomy posters: The Biology of Science Fiction Cinema, 2d ed. Mark C. Glassy, 2024-12-30 Science fiction cinema has dramatically affected the perception of science by the general population. If science fiction and actual science sometimes seem at odds, they importantly share the elements of curiosity, creativity and imagination--and there are many examples of yesterday's science fiction becoming today's science. This book explores the imaginative elements of biology seen in 20th century science fiction films. Written by a professional scientist and science fiction lover, this second edition includes recent updates of biomedical science and science fiction cinema. It covers different categories of biology, biochemistry (or molecular biology), and medicine, each subcategorized into chapters such as cell biology, hematology, and dermatology. Within each chapter are several film examples explaining the biological sciences principles involved, what is right and what is wrong with the science, and what changes could be made for the science of the film to become a reality.

large anatomy posters: *Stoned* David Casarett M.D., 2015-07-14 A doctor discovers the surprising truth about marijuana No substance on earth is as hotly debated as marijuana. Opponents

claim it's dangerous, addictive, carcinogenic, and a gateway to serious drug abuse. Fans claim it as a wonder drug, treating cancer, anorexia, AIDS, chronic pain, glaucoma, arthritis, migraines, PTSD, and insomnia. Patients suffering from these conditions need—and deserve—hard facts based on medical evidence, not hysteria and superstition. In *Stoned*, palliative care physician Dr. David Casarett sets out to do anything—including experimenting on himself—to find evidence of marijuana's medical potential. He smears mysterious marijuana paste on his legs and samples pot wine. He poses as a patient at a seedy California clinic and takes lessons from an artisanal hash maker. In conversations with researchers, doctors, and patients around the world he learns how marijuana works—and doesn't—in the real world. Dr. Casarett unearths tales of near-miraculous success, such as a child with chronic seizures who finally found relief in cannabidiol oil. In Tel Aviv, he learns of a nursing home that's found success giving marijuana to dementia patients. On the other hand, one patient who believed marijuana cured her lung cancer has clearly been misled. As Casarett sifts the myth and misinformation from the scientific evidence, he explains, among other things:

- Why marijuana might be the best treatment option for some types of pain
- Why there's no significant risk of lung damage from smoking pot
- Why most marijuana-infused beer or wine won't get you high

Often humorous, occasionally heartbreaking, and full of counterintuitive conclusions, *Stoned* offers a compassionate and much-needed medical practitioner's perspective on the potential of this misunderstood plant.

large anatomy posters: *Saul Bass* Jan-Christopher Horak, 2014-11-18 Iconic graphic designer and Academy Award-winning filmmaker Saul Bass (1920-1996) defined an innovative era in cinema. His title sequences for films such as Otto Preminger's *The Man with the Golden Arm* (1955) and *Anatomy of a Murder* (1959), Alfred Hitchcock's *Vertigo* (1958) and *North by Northwest* (1959), and Billy Wilder's *The Seven Year Itch* (1955) introduced the idea that opening credits could tell a story, setting the mood for the movie to follow. Bass's stylistic influence can be seen in popular Hollywood franchises from the *Pink Panther* to *James Bond*, as well as in more contemporary works such as Steven Spielberg's *Catch Me If You Can* (2002) and television's *Mad Men*. The first book to examine the life and work of this fascinating figure, *Saul Bass: Anatomy of Film Design* explores the designer's revolutionary career and his lasting impact on the entertainment and advertising industries. Jan-Christopher Horak traces Bass from his humble beginnings as a self-taught artist to his professional peak, when auteur directors like Stanley Kubrick, Robert Aldrich, and Martin Scorsese sought him as a collaborator. He also discusses how Bass incorporated aesthetic concepts borrowed from modern art in his work, presenting them in a new way that made them easily recognizable to the public. This long-overdue book sheds light on the creative process of the undisputed master of film title design—a man whose multidimensional talents and unique ability to blend high art and commercial imperatives profoundly influenced generations of filmmakers, designers, and advertisers.
