netter atlas of human anatomy 9th edition: New Atlas of Human Anatomy Thomas McCracken, 2000 There's never been anything like this before: the very first anatomically exact, and complete, three-dimensional, computer-generated reconstruction of actual human anatomy. These amazing color images come to life thanks to the National Library of Medicine's Visible Human Project™. For every structure, the database generates an incredibly detailed wire frame image, which then underwent contour mapping for a more realistic picture. First, the systemic anatomy appears: the skeletal, muscular, nervous, endocrine, circulatory, respiratory, digestive, urinary, and reproductive systems. Then, the focus is on the regional anatomy, including the head and neck (with brain, eye, and ear); thorax (with lungs and heart); abdomen (stomach, liver, gallbladder, spleen, intestines, kidney); pelvis; upper limb (arm, elbow, forearm, hand); and lower limb (thigh, knee, legs, and foot). It's the most fascinating mirror on our own construction ever produced, and will enthrall students, doctors, scientists, and anyone interested in the miracle that is the human body.
