quotes on anatomy: Building Schools, Making Doctors Katherine L. Carroll, 2022-05-31 In the late nineteenth century, medical educators intent on transforming American physicians into scientifically trained, elite professionals recognized the value of medical school design for their reform efforts. Between 1893 and 1940, nearly every medical college in the country rebuilt or substantially renovated its facility. In *Building Schools, Making Doctors*, Katherine Carroll reveals how the schools constructed during this fifty-year period did more than passively house a remodeled system of medical training; they actively participated in defining and promoting an innovative pedagogy, modern science, and the new physician. Interdisciplinary and wide ranging, her study moves architecture from the periphery of medical education to the center, uncovering a network of medical educators, architects, and philanthropists who believed that the educational environment itself shaped how students learned and the type of physicians they became. Carroll offers the first comprehensive study of the science and pedagogy formulated by the buildings, the influence of the schools' donors and architects, the impact of the structures on the urban landscape and the local community, and the facilities' privileging of white men within the medical profession during this formative period for physicians and medical schools.

quotes on anatomy: Biomedical Visualisation Ourania Varsou, Paul M. Rea, Michelle Welsh, 2022-12-16 This book focuses on the challenges to biomedical education posed by the lockdowns and restrictions to on campus teaching brought about by the COVID-19 pandemic and highlights the tools and digital visualization technologies that have been successfully developed and used for remote teaching. Biomedical education for science, medical, dental and allied health professionals relies on teaching visual and tactile knowledge using practice-based approaches. This has been delivered for decades via on-campus lectures, workshops and laboratories, teaching practical skills as well as fundamental knowledge and understanding. However, the arrival of the COVID-19 pandemic meant that education across the globe had to pivot very quickly to be able to deliver these skills and knowledge in a predominantly online environment. This brought with it many challenges, as Higher Education staff, had to adapt to deliver these visual subjects remotely. This book addresses the challenges and solutions faced by Higher Education staff in teaching visual content in distance education. Chapters include literature reviews, original research, and pedagogical reflections for a wide range of biomedical subjects, degrees such as medicine, dentistry and veterinary sciences with examples from undergraduate and postgraduate settings. The goal of the book is to provide a compendium of expertise based on evidence gathered during the COVID-19 pandemic, as well as reflections on the challenges and lessons learned from this dramatic shift in teaching. It also presents new examples of best practices that have emerged from this experience to ensure that they are not lost as we return to on-campus learning in a new era of biomedical teaching. This book will be of interest to anyone looking for a helpful reference point when designing online or blended teaching for visual practice-based subjects.

quotes on anatomy: Bully Nation Charles Derber, Yale R. Magrass, 2017-12-17 It's not just the bully in the schoolyard that we should be worried about. The one-on-one bullying that dominates the national conversation, this timely book suggests, is actually part of a larger problem—a natural outcome of the bullying nature of our national institutions. And as long as the United States embraces militarism and aggressive capitalism, systemic bullying and all its impacts—at home and abroad—will persist as a major crisis. Bullying looks very similar on the personal and institutional levels: it involves an imbalance of power and behavior that consistently undermines its victim, securing compliance and submission and reinforcing the bully's sense of superiority and legitimacy. The similarity, this book tells us, is not a coincidence. Applying the concept of the “sociological imagination,” which links private problems and public issues, authors Charles Derber and Yale Magrass argue that individual bullying is an outgrowth—and a necessary function—of a larger social phenomenon. Bullying is seen here as a structural problem arising from systems organized around steep power hierarchies—from the halls of the Pentagon, Congress, and corporate offices to classrooms and playing fields and the environment. Dominant people and institutions need to create a culture in which violence and aggression are seen as natural and just: one where individuals compete over who will be bully or victim, and each is seen as deserving their fate within this hierarchy. The larger the inequalities of power in society, or among nations, or even across species, the more likely it is that both institutional and personal bullying will become commonplace. The authors see the life-long psychological scars interpersonal bullying can bring, but believe it is almost impossible to reduce such bullying without first challenging the institutions that breed and encourage it. In the United States a system of intertwined corporations, governments, and military institutions carries out “systemic bullying” to create profits and sustain its own power. While acknowledging the diversity and savagery of many other bully nations, the authors contend that America, as the most powerful nation in the world—and one that aggressively promotes its system as a model—merits special attention. It is only by recognizing the bullying built into this model that we can address the real problem, and in this, *Bully Nation* makes a hopeful beginning.

To cope, he imagined himself a shape-changing Proteus. Transforming first into a lawyer, then a physician, he finally became a teacher at the Nuremberg academy organized by Philip Melanchthon. Volume 5 traces this story via Hessus's poems of 1524-1528: Some Rules for Preserving Good Health (1524; 1531), with attached Praise of Medicine and two sets of epigrams; Three Elegies (1526), two praising the Nuremberg school and one attacking a criticaster; Venus Triumphant (1527), with poems on Joachim Camerarius's wedding; Against the Hypocrisy of the Monastic Habit (1527), with four Psalm paraphrases; and Seventeen Bucolic Idyls (1528), updating the *Bucolicon* of 1509 and adding five idyls.
