air pacific business class: Air Transport in the Asia Pacific David Timothy Duval, 2016-03-16 Air transport in the Asia Pacific has undergone significant transformation in the last three decades. What was once a region in the shadow of larger and more prosperous continents such as North America and Europe is now at the forefront of expansion in commercial air-service networks, frequency and capacity, and the overall growth in the contribution of air transport to economies on regional and, in many cases, individual country levels. Despite this, it represents an area that is generally under-represented in the commercial air-transport academic literature. Air Transport in the Asia Pacific seeks to fill this gap. Against this context, the aim of the volume is to offer a contemporary snapshot of current academic research into commercial air transport in the Asia Pacific. While one volume cannot realistically address the complete range of identifiable issues, this book provides timely, specific and research-based studies authored by leading academics and practitioners.

air pacific business class: *Global Air Transport Management and Reshaping Business Models for the New Era* Kankaew, Kannapat, 2022-05-27 The air transport industry is highly vulnerable to environmental changes as was seen when the recent COVID-19 pandemic caused most airline operations to cease. However, for decades airlines have been collapsing around the globe as the business of managing airline operations has become stressed due to price competition. This is detrimental to air carriers since air transport products and services are the same. Moreover, it impacts other industries such as tourism, hotels, and restaurants, which contribute to the derailment

of economic and social activities. Thus, it is essential to determine new practices and strategies that can allow air transport management to be enriched and to flourish. *Global Air Transport Management and Reshaping Business Models for the New Era* provides a comprehensive collection of knowledge on the new era of business management on air transport. It provides strategies, technologies, and tools used in the reshaping of the air transport business model. Covering topics such as customer experience, robotic process automation, and airline alliances, this major reference work is an essential resource for airline managers, supply chain specialists, air transport managers, students and faculty of higher education, libraries, researchers, economists, government officials, and academicians.

air pacific business class: *Air Travel Fiction and Film* Erica Durante, 2020-08-03 *Air Travel Fiction and Film: Cloud People* explores how, over the past four decades, fiction and film have transformed our perceptions and representations of contemporary air travel. Adopting an interdisciplinary approach, the book provides a comprehensive analysis of a wide range of international cultural productions, and elucidates the paradigms and narratives that constitute our current imaginary of air mobility. Erica Durante advances the hypothesis that fiction and film have converted the Airworld—the world of airplanes and airport infrastructures—into a pivotal anthropological place that is endowed with social significance and identity, suggesting that the assimilation of the sky into our cultural imaginary and lifestyle has metamorphosed human society into “Cloud People.” In its examination of the representations of air travel as an epicenter of today’s world, the book not only illustrates a novel perspective on contemporary fiction, but fills an important gap in the study of globalization within literary and film studies.
