**air canada flight business class: *Air Transport in the 21st Century*** John F. O'Connell, George Williams, 2016-12-05 Airlines are buffeted by fluctuating political and economic landscapes, ever-changing competition, technology developments, globalization, increasing deregulation and evolving customer requirements. As a consequence all sectors of the air transport industry are in a constant state of flux. The principle aim of this book is to review current trends in the airline industry and its related suppliers, thereby providing an insight into the forces that are changing its dynamics. The factors that are reshaping the structure of the industry are examined with a view to identifying the key issues whose impact will be critical in the future. The book features two very distinct sections. The first contains short contributions from industry executives at CEO/VP level from airlines, aircraft/engine manufacturers, safety and navigational provider organisations, who have set out their take of where the airline industry is heading. This commercial input sets the scene for the book and provides the bridge to the second section, which is composed of 18 chapters written by distinguished academic authors. Each chapter presents a valuable insight into a specific area of the air transport industry, including: airlines, airports, cargo, deregulation, the environment, navigation, strategy, information technology, security and tourism. The shared objective of the authors is to describe and explain the core competencies that are determining the current shape of the industry and to examine the forces that will change its direction going forward. The book is written in a management style and will appeal to all levels of personnel who work for airlines across the world. It is also written for airport authorities, aerospace manufacturers, regulatory and government transportation agencies, researchers and students of aviation management, transport studies, tourism and the wider air transport industry.

**air canada flight business class: *Legislating Fatness*** Stephanie von Liebenstein, 2022-07-28 Discrimination based on body weight is an underestimated and widespread problem. There is not a single national law worldwide that prohibits weight discrimination, but quite a number of laws and policies that reinforce, or at least reflect, the existing socially ubiquitous weight stigma. This volume focuses on where and how fatness and law intersect, discussing current anti-discrimination protections related to fatness; the ongoing debate around the introduction of new anti-discrimination categories; national and international principles that seem to argue against the introduction of legal protection of fatness; the question whether fatness should be considered a disability; and weight stigma in legal practice. Starting from a fat studies perspective, this book also considers the legal implications of anti-discrimination legislation for fatness through an intersectional lens, noting how fatness often overlaps with other marginalized identities, including race and ethnicity, gender, and socioeconomic status. This book will be of interest to both professional and lay audiences, providing an introduction into the legal aspects of weightism, as well as offering solutions for legislative practice. It will be an invaluable resource for everyone who would like to be more weight-sensitive in their legal work. The chapters in this book were originally published as a special issue of *Fat Studies: An Interdisciplinary Journal of Body Weight and Society*.
