acer business laptop: Survival of the Smartest Haim Mendelson, Johannes Ziegler, 1999-03-08 Drawing on the innovative concept of Organizational IQ and a study of companies in seventeen countries, Survival of the Smartest charts a course for managers to follow into the twenty first century. At the heart of the book is the authors' assessment tool of an organization's future health, which they call Organizational IQ. It measures a company's ability to quickly process information and make effective decisions. As industry clockspeeds accelerate everywhere, a high IQ has become a prerequisite for survival. Low IQ companies that the authors studied, on the other hand, have already vanished. Case studies from Hewlett-Packard, British Petroleum, Sun Microsystems and Chrysler, among others, illustrate how companies can improve their Organizational IQ. How did Hewlett-Packard become the dominant player in printing? How did British Petroleum transform itself from a stodgy behemoth into the most agile and competitive player in the oil industry? How did Chrysler rise from the brink of bankruptcy to become the auto industry's prized asset? In these companies, technology by itself only played a secondary role: to be successful, the entire organization had to become smarter. The authors show how key strategic decisions turned around these companies' Organizational IQ-and with it, their fortunes. A detailed company case study takes you in slow motion through the different steps you can take to improve the IQ of your own organization. Survival of the Smartest offers a rare blend of a coherent framework, in-depth company case studies, a sound research base, and a detailed, step-by-step implementation example. Based on a landmark study of 164 organizations worldwide, conducted as part of a partnership between Stanford University, McKinsey & Company and the University of Augsburg, Organizational IQ is proving to be the acid test for the success or failure of companies around the world. Haim Mendelson, PhD, is the James Irwin Miller Professor of Information Systems at the Stanford Business School, leader of the Technology, Organizations, and Markets area at the Stanford Computer Industry Project, co-director of the Stanford Executive Program on Strategic Uses of Information Technology, and a consultant to leading high-tech firms and financial institutions. Johannes Ziegler, PhD, is the cofounder of Synesis Management Consulting. Synesis helps senior executives in leading high-tech companies, including Hewlett-Packard, Cisco, 3Com, and Intuit, to measure and improve their Organizational IQs. Before founding Synesis, Dr. Ziegler was a consultant with McKinsey & Company.

Yet, over the past several years, a growing number of CEOs have failed early in their terms, often with devastating consequences to their companies and stockholders. process. Written by Dr. Thomas J. Saporito, CEO of RHR International, and Dr. Paul Winum, Senior Partner of RHR International, the lessons of Inside CEO Succession are rooted in RHR's long-standing history of bringing expert knowledge, experience, advice, and counsel to the issues related to CEO succession. The culmination of RHR's 65 years of experience providing expert counsel to the boards of directors of hundreds of companies, it explains how ego, role-relationships, power, and human dynamics associated with relinquishing leadership, preparing successors, and ceding power and authority to other people create undetected problems in the succession process and ultimately cause many CEOs to fail early in their tenures. Distills RHR's 65 years of experience helping businesses deal with CEO succession into one practical resource Presents strategies to enable boards to understand their role in succession planning and how to source leadership that best fits their organization's culture and requirements Brings together business acumen and psychological insight to help readers better prepare for more effective CEO succession To be successful, CEO succession requires a well-defined course of action that ensures that a number of highly capable candidates are ready to assume the chief executive position whether through an unexpected event or a planned transition. acer business laptop: Dragon Multinational John A. Mathews, 2002-01-31 The conventional view of globalization sees it as a process driven by giant firms from the Triad regions of North America, Europe, and Japan, shaping the world in their own image. This book contests such a view, describing the extraordinary success of a handful of multinationals from the Periphery in globalizing their operations extremely rapidly. Focusing on Acer, the Taiwanese IT company; the Hong Leong hotel group of Singapore; Ispat International in steel; Cemex of Mexico in cement; and Li and Fung from Hong Kong in contract manufacturing, Mathews demonstrates that these firms have been able to utilize strategies of international linkage and leverage to accelerate their global coverage. He contends that they are pioneers of a new kind of global firm, indicators that the global business civilization being created in the 21st century is like to be pluralistic and diverse, offering unprecedented opportunities for firms that know how to enmesh themselves in global networks.
