ansari business building: **The University of Nevada, 1874-2024** John Trent, 2024-10-01 With an uncertain beginning in the sparsely populated remote northern Nevada town of Elko, a preparatory school opened its doors in October 1874 through the Morrill Act that sought to establish land-grant universities across the nation. Seven students began their higher education experience with dreams of a better future, but they probably could not have predicted that their alma mater would one day become the University of Nevada, Reno, a nationally classified Carnegie R1 "Very High Research" institution. As both the University's student body and the state's population grew, the campus was transferred to Reno in 1885-86 as an effort to secure the fledgling institution's prospects for survival. Many of the initial class of thirty-five students resided in Morrill Hall, the only building on campus, where they also received instruction and ate their meals. As the University enhanced its academic offerings, enrollment grew to more than 1,000 students by the turn of the century. A strong belief that the University must always be changing and evolving to meet the needs of its students and answer the challenges of a particular era became the guiding forces behind the administration's decision-making. With an increasingly diverse student body and one of the most productive academic faculties in the country, the little school on the hill expanded during its first 100 years to become a leading public university in the western United States. Today, the University continues to achieve institutional benchmarks, including a record 5,000 graduates during the 2019-20 academic year. It is exactly this kind of student success that has always been at the heart of the Wolf Pack Family's mission to help students find the path that is right for them, and beckon others to share in their journey. The 150th anniversary book is published in honor of this milestone and highlights numerous parts of the University's history, showcasing why the University of Nevada, Reno has truly been a catalyst for success and change throughout the state's story.

Lemieux, Chen Feng, 2021-01-04 This volume brings together a multidisciplinary group of scholars from diverse fields including computer science, engineering, archival science, law, business, psychology, economics, medicine and more to discuss the trade-offs between different “layers” in designing the use of blockchain/Distributed Ledger Technology (DLT) for social trust, trust in data and records, and trust in systems. Blockchain technology has emerged as a solution to the problem of trust in data and records, as well as trust in social, political and economic institutions, due to its profound potential as a digital trust infrastructure. Blockchain is a DLT in which confirmed and validated sets of transactions are stored in blocks that are chained together to make tampering more difficult and render records immutable. This book is dedicated to exploring and disseminating the latest findings on the relationships between socio-political and economic data, record-keeping, and technical aspects of blockchain.

ansari business building: (Sustainable) Supply Chain Management at the Base of the Pyramid Raja Usman Khalid, 2018-01-01 Base-of-the-pyramid (BoP) research talks about market based solutions for the development of marginalized sections of informal market economies. However, absence of sound theoretical foundations is obstructing development of the discourse. Relatively mature, (sustainable) supply chain management ((S)SCM) literature has many analogous concepts to the BoP research. The integration of the two research streams can not only provide BoP with the much needed theoretical infrastructure, but can also open new research frontiers for the (S)SCM research. The extent dissertation is an effort to integrate the BoP and (S)SCM research. The results of the systematic literature review highlight the theoretical commonalities among the two research streams and led to development of certain frameworks based upon the results of contingency analysis. The empirical part of the dissertation tries to explore the (S)SCM practices significantly affecting the purchasing performance of indigenous BoP firms in a B2B context. Argumentation of the resource dependency theory is employed to get deeper insights into the empirical results of the study.

ansari business building: Success in the Bottom of the Pyramid Market in Africa Philipp von Carlowitz, 2020-11-13 This book presents an empirical investigation of the efforts that multinational pharmaceutical companies take in order to find a business model that allows for a

profitable access to the Bottom of the Pyramid (BoP) markets. The Bottom of the Pyramid in Africa is frequently mentioned as an attractive market due to its sheer size. Yet most companies struggle to access it because of the low price level, difficult physical market access and challenges when it comes to payment. More specifically, the book investigates the following business model-related questions: Do pharmaceutical companies provide products that meet the needs of the BoP? What characterizes the value generation of the company? What revenue model leads to a profitable business, and what role does a network of partners play in the business model? Findings reveal that there is no 'one-size-fits-all' answer to these questions. Providing continuous availability, affordability at a good quality of goods and services, creating health awareness, as well as localizing business to achieve a level of inclusiveness are essential prerequisites for success. In the last chapter this book provides a business model prototype that accounts for these key success factors for business at the Bottom of the Pyramid and points to further research topics.

ansari business building: The Real-Time Revolution Jerry Power, Thomas Ferratt, 2019-09-03

Time has become a precious commodity, so business leaders who can save their customers' time more effectively than competitors do will win their loyalty. This book shows how it's done. Business

survival requires valuing what customers value—and in our overworked and distraction-rich era, customers value their time above all else. Real-time companies beat their rivals by being faster and more responsive in meeting customer needs. To become a real-time company, as top scholars Jerry Power and Tom Ferratt explain, you need a real-time monitoring and response system. They offer detailed advice on how to put procedures in place that will collect data on how well products or services are saving customer time; identify strengths, weaknesses, threats, and opportunities; and specify innovations needed to save even more customer time. Where should leaders look to innovate? Powers and Ferratt say to search every step in the life of a product or service, from development to production to usage. And for each step, they identify four possible levers for innovation: the design of the products or services themselves, the process used to produce them, the data that can be gathered on their use, and the people who make or provide the product or service. The book features dozens of examples of companies that are getting it right and the innovations they used to help their customers save time, all while helping themselves to a hefty slice of market share. This is a comprehensive, authoritative guide to thriving in a revolution that is sweeping every industry and sector.
