### UNDERSTANDING BUSINESS ANALYTICS

BUSINESS ANALYTICS REFERS TO THE SYSTEMATIC USE OF DATA AND STATISTICAL ANALYSIS TO GAIN INSIGHTS INTO BUSINESS PERFORMANCE AND DRIVE STRATEGIC DECISION-MAKING. BY LEVERAGING DATA, ORGANIZATIONS CAN IDENTIFY TRENDS, FORECAST FUTURE PERFORMANCE, AND IMPROVE OPERATIONAL EFFICIENCY. THE RISE OF BIG DATA HAS EXPANDED THE SCOPE OF BUSINESS ANALYTICS, ALLOWING ORGANIZATIONS TO ANALYZE VAST AMOUNTS OF INFORMATION FROM VARIOUS SOURCES.

AT ITS CORE, BUSINESS ANALYTICS INVOLVES THE APPLICATION OF QUANTITATIVE TECHNIQUES TO SOLVE BUSINESS PROBLEMS. THIS CAN INCLUDE EVERYTHING FROM ANALYZING CUSTOMER BEHAVIOR AND MARKET TRENDS TO OPTIMIZING SUPPLY CHAIN MANAGEMENT AND IMPROVING FINANCIAL PERFORMANCE. AS ORGANIZATIONS STRIVE TO BECOME MORE DATA-DRIVEN, THE IMPORTANCE OF BUSINESS ANALYTICS CONTINUES TO GROW.

# KEY COMPONENTS OF BUSINESS ANALYTICS

Understanding the key components of business analytics is essential for professionals in this field. The main components include data management, descriptive analytics, predictive analytics, and prescriptive analytics.

#### DATA MANAGEMENT

DATA MANAGEMENT IS THE FOUNDATION OF BUSINESS ANALYTICS. IT INVOLVES COLLECTING, STORING, AND ORGANIZING DATA FROM VARIOUS SOURCES. EFFECTIVE DATA MANAGEMENT ENSURES THAT DATA IS ACCURATE, ACCESSIBLE, AND SECURE. THIS IS CRITICAL BECAUSE THE QUALITY OF DATA DIRECTLY IMPACTS THE INSIGHTS GENERATED THROUGH ANALYTICS.

### DESCRIPTIVE ANALYTICS

DESCRIPTIVE ANALYTICS FOCUSES ON ANALYZING HISTORICAL DATA TO UNDERSTAND WHAT HAS HAPPENED IN THE PAST. THIS TYPE OF ANALYSIS INVOLVES SUMMARIZING DATA AND GENERATING REPORTS TO IDENTIFY TRENDS AND PATTERNS. COMMON TECHNIQUES INCLUDE DATA VISUALIZATION, REPORTING TOOLS, AND DASHBOARDS.

#### PREDICTIVE ANALYTICS

PREDICTIVE ANALYTICS USES STATISTICAL MODELS AND MACHINE LEARNING TECHNIQUES TO FORECAST FUTURE OUTCOMES BASED ON HISTORICAL DATA. BY IDENTIFYING PATTERNS AND TRENDS, ORGANIZATIONS CAN MAKE INFORMED PREDICTIONS ABOUT CUSTOMER BEHAVIOR, SALES TRENDS, AND OPERATIONAL CHALLENGES.

### PRESCRIPTIVE ANALYTICS

Prescriptive analytics goes a step further by recommending actions based on data analysis. This type of analytics evaluates various scenarios and suggests the best course of action to achieve desired outcomes. Techniques used in prescriptive analytics include optimization algorithms and simulation models.

### Types of Business Analytics

THERE ARE SEVERAL TYPES OF BUSINESS ANALYTICS THAT ORGANIZATIONS CAN UTILIZE, EACH SERVING DIFFERENT PURPOSES AND PROVIDING UNIQUE INSIGHTS. THE THREE PRIMARY TYPES ARE DESCRIPTIVE ANALYTICS, PREDICTIVE ANALYTICS, AND PRESCRIPTIVE ANALYTICS, EACH WITH SPECIFIC APPLICATIONS.

- DESCRIPTIVE ANALYTICS: USED FOR UNDERSTANDING HISTORICAL PERFORMANCE AND TRENDS.
- PREDICTIVE ANALYTICS: HELPS IN FORECASTING FUTURE TRENDS AND BEHAVIORS.
- Prescriptive Analytics: Provides recommendations for action based on data analysis.

EACH TYPE SERVES A DISTINCT PURPOSE BUT IS INTERRELATED, OFTEN WORKING TOGETHER TO PROVIDE A COMPREHENSIVE VIEW OF BUSINESS PERFORMANCE. ORGANIZATIONS MAY LEVERAGE ALL THREE TYPES TO ENHANCE THEIR DECISION-MAKING PROCESSES AND STRATEGIC PLANNING.

business analytics ba: Approximate Dynamic Programming for Dynamic Vehicle Routing Marlin Wolf Ulmer, 2017-04-19 This book provides a straightforward overview for every researcher interested in stochastic dynamic vehicle routing problems (SDVRPs). The book is written for both the applied researcher looking for suitable solution approaches for particular problems as well as for the theoretical researcher looking for effective and efficient methods of stochastic dynamic optimization and approximate dynamic programming (ADP). To this end, the book contains two parts. In the first part, the general methodology required for modeling and approaching SDVRPs is presented. It presents adapted and new, general anticipatory methods of ADP tailored to the needs of dynamic vehicle routing. Since stochastic dynamic optimization is often complex and may not always be intuitive on first glance, the author accompanies the ADP-methodology with illustrative examples from the field of SDVRPs. The second part of this book then depicts the application of the theory to a specific SDVRP. The process starts from the real-world application. The author describes a SDVRP with stochastic customer requests often addressed in the literature, and then shows in detail how this problem can be modeled as a Markov decision process and presents several anticipatory solution approaches based on ADP. In an extensive computational study, he shows the advantages of the presented approaches compared to conventional heuristics. To allow deep insights in the functionality of ADP, he presents a comprehensive analysis of the ADP approaches.

business analytics ba: Routledge Handbook of Research Methods in Military Studies Joseph Soeters, Patricia M. Shields, Sebastiaan Rietjens, 2014-06-27 This volume offers an overview of the methodologies of research in the field of military studies. As an institution relying on individuals and resources provided by society, the military has been studied by scholars from a wide range of disciplines: political science, sociology, history, psychology, anthropology, economics and administrative studies. The methodological approaches in these disciplines vary from computational modelling of conflicts and surveys of military performance, to the qualitative study of military stories from the battlefield and veterans experiences. Rapidly developing technological facilities (more powerful hardware, more sophisticated software, digitalization of documents and pictures) render the methodologies in use more dynamic than ever. The Routledge Handbook of Research Methods in Military Studies offers a comprehensive and dynamic overview of these developments as they emerge in the many approaches to military studies. The chapters in this Handbook are divided over four parts: starting research, qualitative methods, quantitative methods, and finalizing a study, and every chapter starts with the description of a well-published study illustrating the methodological issues that will be dealt with in that particular chapter. Hence, this Handbook not only provides methodological know-how, but also offers a useful overview of military studies from a variety of research perspectives. This Handbook will be of much interest to students of military studies, security and war studies, civil-military relations, military sociology, political science and research methods in general.

business analytics ba: Quantitative Research in Economics and Management Sciences Agnieszka Zakrzewska-Bielawska, Anna M. Lis, Anna Ujwary-Gil, 2022-01-01 In this thematic issue of the Journal of Entrepreneurship, Management and Innovation, entitled Qualitative Research in Economics and Management Sciences, the authors used many quantitative methods and research models, e.g. SEM, PLS-SEM, or probit models (Table 1). Each of these approaches is characterized by methodological rigor and an assessment of the reliability and validity of the research instruments used. Pini and Tchorek (2022) analyze the determinants of exports in two European, culturally related countries, such as Italy and Poland, using an econometric and probit model, which implies a normal distribution of errors and is adapted to binary responses (excluding size and age variables). The authors investigate the influence of many independent variables (size, age, management by family members or external managers) on the dependent variable (export), controlling the research model by product and process innovation, location in a less developed region, operations in a high/medium-high technology-intensive sector or cooperation with many banks. The results confirm the authors' initial assumptions that the size of companies influences the exports of the surveyed countries; the age of companies exporting their goods is more important in Italy than in Poland, where no such impact has been recorded. In addition, management by an external manager increases the likelihood of exports for younger family businesses in Italy and smaller family businesses in Poland. The authors also showed that product innovation is the engine of exports in Italy and Poland, and geographic location affects the likelihood of exports in Italy, but not in Poland. In other studies, Paulino (2022) presents the growing business analytics and business intelligence in the Philippines, their impact on organizational performance, and marketing, financial, and business process performance indicators. Retail companies were selected for the study, focusing on advanced data management used in business operations. The author mainly used the well-known PLS-SEM model, and his research instrument was assessed in terms of content validity, construct validity, and reliability. The results of the measurement and structural model evaluation were also subject to verification. The results indicate the impact of business analytics capabilities (including the ability of the decision support system (DSS), business process improvement (BPM), data dashboard (DD), and financial analysis (FA) on the business intelligence level. In addition, it has been empirically verified that organizational performance influences marketing, financial, and business process performance. Overall, business intelligence is an essential predictor of a retail company's organizational performance. The assumption that the level of readiness to implement business analytics can be treated as a moderating factor between business analytics and organizational performance has not been confirmed. The next article by Klimontowicz and Majewska (2022) presents the positive impact of intellectual capital (IC), especially its three components, such as process capital, human capital and relational capital, on the competitiveness of banks and market efficiency. The authors used the following methods and tools: Principal Axis Factor Analysis, PLS-SEM, PAPI, and CAWI. As a result of their application, they emphasize that, in contrast to previous research, the process capital dominates the bank's potential to create a competitive advantage, not human capital, proving the vital role of technology and innovation. They found that competitive performance moderates the relationship between IC and market efficiency; the environment positively moderates the relationship between IC and competitor performance as well as the relationship between competitor performance and market efficiency. The size of the bank and the length of its market activity affect the market efficiency measured by the average rate of changes in ROA and ROE. The study expands

the existing evidence, mainly from well-developed countries, on the intellectual capital of Polish banks, emphasizing the process capital to a much greater extent as a modern and so far little exposed component of IC in other research. The last two articles refer to human resource management. Hassan's study (2022) explores the impact of human resource management (HRM) practices on employee retention. In addition, he moderates the role of performance evaluation, training and development in the relationship between HRM practices and employee retention. Using SEM and questionnaires validated by other researchers, the author proves the originality of research in the retail sector in the Maldives on improving employee retention, a complementary approach to the impact of rewards and compensations, training and employee development, as well as assessing their results in human capital management, recommending practical solutions for the sector retail Maldives. In another study on workers' adaptive performance, Tan and Antonio (2022) using PLS-SEM prove that the new form of remote work and the so-called e-leadership forced by the COVID-19 pandemic have changed the way employers and employees interact. Organizational commitment, teleworking and a sense of purpose affect the adaptive performance of employees directly, while the perception of e-leadership indirectly. It is also one of the first studies to capture intrinsic motivation as the antecedent of employee adaptive performance, along with perceived e-leadership and teleworking results.
