bp business gas card: Russian Energy Chains Margarita M. Balmaceda, 2021-05-11 Russia's use of its vast energy resources for leverage against post-Soviet states such as Ukraine is widely recognized as a threat. Yet we cannot understand this danger without also understanding the opportunity that Russian energy represents. From corruption-related profits to transportation-fee income to subsidized prices, many within these states have benefited by participating in Russian energy exports. To understand Russian energy power in the region, it is necessary to look at the entire value chain—including production, processing, transportation, and marketing—and at the full spectrum of domestic and external actors involved, from Gazprom to regional oligarchs to European Union regulators. This book follows Russia's three largest fossil-fuel exports—natural gas, oil, and coal—from production in Siberia through transportation via Ukraine to final use in Germany in order to understand the tension between energy as threat and as opportunity. Margarita M. Balmaceda reveals how this dynamic has been a key driver of political development in post-Soviet states in the period between independence in 1991 and Russia's annexation of Crimea in 2014. She analyzes how the physical characteristics of different types of energy, by shaping how they can be transported, distributed, and even stolen, affect how each is used—not only technically but also politically. Both a geopolitical travelogue of the journey of three fossil fuels across continents and an incisive analysis of technology's role in fossil-fuel politics and economics, this book offers new ways of thinking about energy in Eurasia and beyond.

bp business gas card: Business Lessons from a Radical Industrialist Ray C. Anderson, Robin White, 2011-03-29 In 1994, Interface founder and chairman Ray Anderson set an audacious goal for his commercial carpet company: to take nothing from the earth that can't be replaced by the earth.

Now, Anderson leads the way forward and challenges all of industry to share that goal, with *Business Lessons from a Radical Industrialist*. The Interface story is a compelling one: in 1994, making carpets was a toxic, petroleum-based process, releasing immense amounts of air and water pollution and creating tons of waste. Fifteen years after Anderson's call for change, Interface has: —cut greenhouse gas emissions by 82% —cut fossil fuel consumption by 60% —cut waste by 66% —cut water use by 75% —invented and patented new machines, materials, and manufacturing processes —increased sales by 66%, doubled earnings, and raised profit margins With practical ideas and measurable outcomes that every business can use, Anderson shows that profit and sustainability are not mutually exclusive; businesses can improve their bottom lines and do right by the earth. Ray Anderson is featured in the film, *So Right, So Smart*, which takes a behind-the-scenes look at how his leadership transformed Interface into a company with a sustainable business practices that made it more profitable than it was before.

bp business gas card: *History of the European Oil and Gas Industry* J. Craig, F. Gerali, F. MacAulauy, R. Sorkhabi, 2018 The history of the European oil and gas industry reflects local as well as global political events, economic constraints and the personal endeavours of individual petroleum geoscientists as much as it does the development of technologies and the underlying geology of the region. The first commercial oil wells in Europe were drilled in Poland in 1853, Romania in 1857, Germany in 1859 and Italy in 1860. The 23 papers in this volume focus on the history and heritage of the oil and gas industry in the key European oil-producing countries from the earliest onshore drilling to its development into the modern industry that we know today. The contributors chronicle the main events and some of the major players that shaped the industry in Europe. The volume also marks several important anniversaries, including 150 years of oil exploration in Poland and Romania, the centenary of the drilling of the first oil well in the UK and 50 years of oil production from onshore Spain.

bp business gas card: *Issues in Global Business* SAGE Publishing, 2021-03-03 In 2020, COVID-19 starkly demonstrated the global interconnectedness of business, as it disrupted supply chains and manufacturing operations, broadly shuttered retail stores, and led to restrictions on movement and travel around the world.
