business greece: *Business Opportunities in Greece* U. S. Department U.S. Department of Commerce, 2014-09-09 Greece finds itself in one of its most challenging economic periods in recent history. The global financial crisis has exposed and exacerbated fiscal and other structural weaknesses in the Greek economy that led to a ballooning fiscal deficit estimated at 15.4 percent of GDP in 2009, compared to the E.U. ceiling of three percent, and one of the highest levels of public debt in the Eurozone. Compounding its economic problems, Greece has a history of other business challenges such as high levels of corruption and tax evasion, and very low levels of business transparency. To address its economic crisis, Greece has received loans from the European Central Bank and the International Monetary Fund (IMF) and has instituted a number of austerity measures

and reforms in compliance with the loan stipulations. Implementation of these measures has been challenging, with frequent strikes and other forms of social unrest. The Greek government continues to institute changes and is confident that Greece can weather this storm. While unemployment remains high (around 13 percent), consumption has dropped and consumer confidence has declined. Some success has been attained, most notably a drop in the deficit to 9.6 percent of GDP. In spite of the market challenges, many U.S. companies have been quite successful in the Greek market. Key to successfully doing business in Greece is conducting due diligence and partnering with a local representative, and there are many effective Greek companies assisting U.S. firms in this market. U.S. products are viewed favorably in Greece for their innovation and quality, and despite stiff competition from the E.U. and Asia, are ubiquitous in this market.

business greece: Doing Business 2012 World Bank, 2011-10-18 Ninth in a series of annual reports comparing business regulations in 183 economies, Doing Business 2012 measures regulations affecting 11 areas of everyday business activity: starting a business dealing with construction permits employing workers registering property getting credit protecting investors paying taxes trading across borders enforcing contracts closing a business getting electricity The report updates all indicators as of June 1, 2011, ranks countries on their overall ease of doing business, and analyzes reforms to business regulation identifying which countries are strengthening their business environment the most. Doing Business 2012 includes a new set of indicators on the time, steps, and cost for a private business to get an electricity connection. The data on connection services can inform utilities, regulators and governments seeking to strengthen the performance of the electricity sector. Drawing on a now longer time series, this year's report introduces a measure to illustrate how the regulatory environment for business has changed in each economy since Doing Business 2006 was published in 2005. A new distance to frontier measure complements the aggregate ranking on the ease of doing business, which benchmarks each economy's current performance on the indicators against that of all other economies in the sample for a given year. A fundamental premise of Doing Business is that economic activity requires good rules that are transparent and accessible to all. Such regulations should be efficient, striking a balance between safeguarding some important aspects of the business environment and avoiding distortions that impose unreasonable costs on businesses. Where business regulation is burdensome and competition limited, success depends more on whom you know than on what you can do. But where regulations are relatively easy to comply with and accessible to all who need to use them, anyone with talent and a good idea should be able to start and grow a business in the formal sector. The Doing Business report, which was started in 2003, has become one of the key ways in which the bank and other observers gauge business climate within developing countries... -- The Financial Times [Doing Business started] as a way to encourage countries to reduce obstacles to entrepreneurship. Developing countries compete to land a spot on the top 10 list of most-improving countries because it is seen as a way to get attention and investment. -- The Wall Street Journal [Doing Business] has succeeded in putting the issue of business red tape on the international political agenda. -- The Economist

business greece: Researching and Teaching Business Ethics in Europe Christopher Cowton, Heidi von Weltzien Høivik, Ronald Jeurissen, Bart Jansen, 2025-09-30 This book provides a description and analysis of how the concept of business ethics has been received, adopted, adapted and developed in different countries in Europe. While a substantial Europe-wide dialogue about business ethics research and education has taken place since about 1990, especially as a result of

the establishment of the European Business Ethics Network, implementation has varied by country, because Europe is a patchwork of cultures, value systems, political ideologies, intellectual traditions and business systems at different stages of development. Each country, particularly the former communist states, presents its own unique challenges. Yet there are also issues that are common to all or most countries, even if the ways they have been manifested and responded to have differed, depending on the countries' institutional frameworks and traditions. This book explores the rich variety in business ethics research and education across a diverse range of European countries. Each chapter presents the expert view of individual business ethics scholars in the respective countries. Their perspectives and recollections are those of reflective professionals, and therefore unique, insightful, and bearing the mark of a deep conviction and personal engagement. This is the story of European business ethics told from within, which will be of great value to all business ethics scholars wishing to understand the development of their field.

business greece: *Fusing Decision Support Systems Into the Fabric of the Context* A. Respício, F. Burstein, 2012-06-13 The field of Information Systems has been shifting from an 'immersion view', which relies on the immersion of information technology (IT) as part of the business environment, to a 'fusion view' in which IT is fused within the business environment, forming a unified fabric that integrates work and personal life, as well as personal and public information. In the context of this fusion view, decision support systems should achieve a total alignment with the context and the personal preferences of users. The advantage of such a view is an opportunity of seamless integration between enterprise environments and decision support system components. Thus, researchers and practitioners have to address the challenges of dealing with this shift in viewpoint and its consequences for decision making and decision support systems theories and applications. This book presents the latest innovations and advances in decision support systems with a special focus on the fusion view. These achievements will be of interest to all those involved and interested in decision making practice and research, as well as, more generally, in the fusion view of modern information systems. The book covers a wide range of topical themes including a fusion view of business intelligence and data warehousing, applications of multi-criteria decision analysis, intelligent models and technologies for decision making, knowledge management, decision support approaches and models for emergency management, and medical and other specific domains.
