business management course online: Small Business Management for Online Business

Nicolae Sfetcu, 2014-10-20 Revision 1.1 A guide for home business and small business companies to develop online strategies for online presence, using the advantages of Web 2.0, web development, online promotion and social media. Web 2.0 is the evolution of the Web towards greater simplicity (requiring no technical knowledge or computer for users) and interactivity (allowing everyone, individually or collectively, to contribute, share and collaborate in various forms). Crowdsourcing, or participatory production, one of the emerging areas of knowledge management, is the use of creativity, intelligence and know-how of a large number of people, outsourcing, to perform certain tasks traditionally performed by an employee or contractor. Web development can take different forms: from a simple static page to dynamic pages with a connection to a database. Agile methods are groups of practices for the development of projects in IT (software design) that can be applied to various types of projects. They involve the maximum the applicant (client) and allow greater responsiveness to requests. They aim to real customer satisfaction a priority under a development agreement. A succesful web development is primarily based on iterative refinement of needs implemented in functionality in progress and even already completed. The marketing strategy aims to put the company in question in line with the implicit or explicit requirements of the market in which it operates. The foundations of the strategy are to discover and especially to influence the needs of potential customers and identify products and services. E-marketing, or Internet marketing, is used to manage a web presence and a report to the user and to the communities it represents. The challenge here is to disseminate a consistent image of brand and company regardless of the communication media. Marketing 2.0 refers to a new generation of emerging marketing concepts of the Internet age. A social network is a set of brands, such as individuals or organizations, interconnected by links created during social interactions. It is represented by a structure or a dynamic form of a social group. The analysis of social networks is based on network theory, the use of graphs, and sociological analysis. Pnline social networking services are used to build a social network by connecting friends, associates, and generally individuals together using a variety of tools in order to facilitate, for example, management of professional careers, distribution and artistic visibility, or private meetings. Social commerce is a subset of e-commerce. It involves social media, and other digital media that support social interaction and user contributions, to assist in buying and selling products and services online. Simply put, social commerce is the use of social networks for e-commerce transactions.

business management course online: The Routledge Companion to International

Management Education Denise Tsang, Hamid H. Kazeroony, Guy Ellis, 2013-06-19 Crises and scandals in the world of international management have brought a new spotlight onto how the subject is taught, studied and understood. There has been a plethora of literature on international management, but a lack of focus on how international management education (IME) can be shaped to respond to existing and future global business challenges. The Routledge Companion to

International Management Education gathers together contributors from academia, industry and university administration involved in IME, to: introduce the domain of IME; describe the emerging state in new geographical areas; discuss the major issues and debates revolving around IME; explore the linkage of technology and international management, and shed light on the future of IME. The diverse background of the contributors provides a global perspective that challenges the dominant Anglo-American view, with up-to-date specific insights originating from their indigenous view points, which has often been neglected and inadequately covered. The volume answers important questions, such as: Do we need a vision in IME? What is the current state of IME? How has IME grown in emerging market segments? What roles does technology play in its recent development? The volume provides thought-provoking reading for educators, administrators, policy makers, human resources professionals and researchers. It will also give future international management students a glimpse of IME from a global inside-out perspective.
