business parks manchester: Technology and Industrial Parks in Emerging Countries

Andrés Rodríguez-Pose, Daniel Hardy, 2014-06-16 Industrial and technology parks are commonly regarded as a policy panacea. They tend to be considered as the ideal instrument to alleviate an assortment of institutional, political, economic, social and ultimately, technological weaknesses and often form the centrepiece of development strategies. Yet, the real impact of industrial and technology parks, especially in emerging countries is still poorly understood. Focusing on examples from Latin America, Asia, Africa and the Middle East, the book represents a first approach to understand the potential and reality of industrial and technology parks in emerging countries. It is argued that although some parks have been successful in addressing a range of key problems, including underdevelopment, unemployment and a lack of investment, the majority have failed to deliver, rendering the promise of many parks little more than a pipedream.

business parks manchester: Singapore's Business Park Real Estate Kim Hin David HO, 2021-09-26 Chapter 1 explores the extent to which the fundamental structure and behaviour of the large-scale high-tech strategic industrial real estate development projects, can be shaped in terms of institutional and macroeconomic conditions. Capital budgeting techniques and copula risk functions, affirm the relative influence of uncertain macroeconomic and financial variables, on the profitability of Singapore's Biopolis at the One North development. Chapter 2 looks at the dynamics of the large-scale high-tech strategic industrial real estate market. The Chapter aims to understand the fundamental structure and behaviour of the industrial real estate in Singapore, and to broadly indicate the relative impacts of macroeconomic conditions on such industrial real estate market dynamics. In Chapter 3 and for the case of Singapore, the Chapter adopts the unrestricted vector autoregressive (VAR) approach, to understand how the space and asset markets in industrial real estate, are shaped via endogenous and exogenous factors. Chapter 4 construes the knowledge-based urban development (KBUD) strategy, to be a significant form of urban renewal of post-industrial

cluster-based industrial cities. Urban planners are compelled to explore mixed-use zoning, the knowledge-based urban development-land use design model (KBUD-LUDM), its knowledge interaction design criteria (KIDC) and the land-use cost criteria (LUCC). Chapter 5 concludes this book.

business parks manchester: The Green Belt, Housing Crises and Planning Systems Charles Edward Goode, 2025-03-31 This book evaluates the effectiveness of the Green Belt planning policy in England. It is one of the most well-known strategies internationally, with similar growth restraint policies having been adopted in a diverse range of cities around the world, such as Portland, Medellin and Bangkok. Despite this, it is often argued that Green Belts contribute to wider inequitable outcomes in society. Focusing on the Green Belt in England, the book critically analyses the extent to which these policies and planning systems contribute to housing crises and examines how far they need to be reformed. With the central role of community engagement in many of the debates about housing crises, the book investigates the characteristics of popular and campaigner opposition to housebuilding alongside investigating the power relations and politics of planning systems. This timely research taps into important current policy debates in the UK surrounding urban nature, green infrastructure, and building on the 'grey belt'. The book is therefore of relevance and benefit to policymakers and politicians, to academics and students internationally from a range of fields interested in housing, community engagement, green infrastructure, strategic planning, power and politics, and conservation.

The Oxford Handbook of Industrial Hubs and Economic Development adopts an interdisciplinary approach to examine the conceptual underpinnings, review empirical evidence of regions and economies, and extract pertinent lessons for policy researchers and practitioners on the key drivers of success and failure for industrial hubs. This Handbook illustrates the diverse and complex nature of industrial hubs and shows how they promote industrialization, economic structural transformation, and technological catch-up. business parks manchester: **Organizing Entrepreneurship** Anna Grandori, Laura Gaillard Giordani, 2011-05-09 Entrepreneurship has regained centre stage in the contemporary knowledge-intensive and innovation-driven economy, as well as in research. Integrating classic and recent insights into the organization, economics and management of entrepreneurial activities, Organizing Entrepreneurship aims to blend rigor with relevance, and connects theory with practical problems around key questions, such as: Is there any method in having 'good ideas' and discovering opportunities? Through which mechanisms can human, social, technical and financial resources be attracted and dedicated to new projects? Which alternative governance and organizational structures are to be considered for the constitution and organization of a new firm? To grow or not to grow? (Or how to grow without up-sizing)? How do you organize grown-up firms in an entrepreneurial mode? How can environments and external institutions help? Original case studies are discussed and integrated throughout the text, which reflect a wide range of sectors (from agri-business to high tech) and countries (including emerging economies). Providing a unique resource for students and instructors of entrepreneurship and organization, this book also offers new insights to entrepreneurs and investors in the organization of new firms, as well as to managers striving to infuse entrepreneurial behaviors into their already established firms.

business parks manchester: City of Change and Challenge Chris Couch, 2017-11-22 This title was first published in 2003. Over the last 30 years, Liverpool has undergone more economic restructuring and urban change than virtually any other city in Britain and Europe. It has also been a testing ground for almost every experiment and innovation in modern urban policy. City of Change and Challenge analyses the urban planning and regeneration experience in Liverpool over this period. In doing so, it considers the extent to which the pressure to create jobs has led to economic development aims consistently taking precedence over environmental and social concerns, and the degree to which regeneration has been dominated by centralised and top-down approaches without a strong strategic planning framework. It also discusses why some policies and programmes have been more successful than others and what lessons might be learned, not only by Liverpool's future policy makers, but also by planners, politicians and academics throughout the world.
