business search la: *Unicist R&D of Adaptive Systems in Business* Peter Belohlavek, 2012-03-19 This book is focused on the R&D of the adaptive systems of businesses in order to develop and design solutions for them. It provides the technology to research and develop solutions for growth, innovation and improvement of business processes. It integrates applied research and architectural design. It starts with a research process where the solutions need to be confirmed and ends with a design process developing the architecture of a business, business process or business unit. The research process is homologous to the clinical trials that are developed in medicine. What needs to be confirmed is the efficacy the solution provides, the security and safety of the process and the side effects the solution produces. The solution needs to be considered as a unified field with the system in order to confirm the validity of the remedy . The first step of an R&D process is being able to apprehend the unified field of a business. After this has been achieved, a diagnosing process can begin. This work shows that the solution has to be designed and built considering its utility, aesthetics and solidity. That is why an extreme design process is used (Unicist XD) that includes several pilot tests to ensure the functionality of the solution.
