

business rules management system

business rules management system plays a critical role in modern enterprises by enabling organizations to define, manage, and execute business rules efficiently. This system not only streamlines decision-making processes but also ensures compliance and adaptability in an ever-changing business environment. In this comprehensive article, we will explore the key components of a business rules management system, its benefits, implementation strategies, and the future trends shaping its evolution. Whether you are a business owner, a system architect, or a decision-maker, understanding the intricacies of a business rules management system is essential for optimizing business operations and achieving strategic objectives.

Understanding Business Rules Management Systems

A business rules management system (BRMS) is a software framework designed to define, deploy, monitor, and maintain business rules. These rules are essential for guiding decision-making processes and ensuring that business operations adhere to established policies and regulations. A BRMS provides a centralized repository for business rules, allowing organizations to manage them independently from application code. This separation results in greater agility and responsiveness to business changes.

Business rules can range from simple conditional statements to complex decision trees and can cover various aspects of business operations, including compliance, risk management, customer relationship management, and process automation. By utilizing a BRMS, organizations can enhance their operational efficiency, reduce errors, and improve overall business agility.

Key Components of a Business Rules Management System

A well-designed business rules management system consists of several key components that work together to facilitate the management of business rules effectively. Understanding these components is vital for leveraging a BRMS to its fullest potential.

Rule Repository

The rule repository is the core component where all business rules are stored. It serves as a centralized database that allows users to create, modify, and manage rules without needing to alter the underlying application code. This repository is essential for maintaining version control and ensuring that all stakeholders have access to the most current rules.

Rule Engine

The rule engine is responsible for executing the business rules defined in the repository. It evaluates the rules against incoming data and determines the appropriate actions based on the defined logic. The rule engine can operate in real-time or batch processing modes, depending on the organization's needs.

User Interface

A user-friendly interface is crucial for enabling business analysts and non-technical users to interact with the BRMS efficiently. The interface should allow users to easily create, modify, and test business rules without requiring programming skills. Intuitive design and usability are key factors in ensuring widespread adoption within the organization.

Integration Capabilities

Integration capabilities are essential for a BRMS to communicate with other systems and applications within the organization. This includes data sources, customer relationship management (CRM) systems, enterprise resource planning (ERP) systems, and more. Seamless integration allows for a more comprehensive view of the business and enhances decision-making processes.

Benefits of Implementing a Business Rules Management System

Implementing a business rules management system offers numerous advantages that can significantly enhance an organization's operational effectiveness and strategic agility. Here are some of the key benefits:

- **Improved Agility:** A BRMS allows organizations to adapt quickly to changes in business conditions, regulations, and market demands by enabling rapid updates to business rules.
- **Enhanced Compliance:** By automating compliance-related rules, organizations can reduce the risk of non-compliance with industry regulations and standards.
- **Reduced Operational Costs:** Automating decision-making processes minimizes human intervention and errors, leading to lower operational costs and increased efficiency.

- **Increased Transparency:** A centralized repository of business rules improves visibility into the decision-making processes, making it easier to audit and analyze business operations.
- **Better Decision Making:** With real-time access to relevant data and rules, organizations can make informed decisions that align with their strategic goals.

How to Implement a Business Rules Management System

Implementing a business rules management system requires careful planning and execution to ensure that it meets the organization's needs. Here are the key steps to consider:

Assessment of Business Needs

The first step in implementing a BRMS is to assess the specific business needs and objectives. This includes identifying the areas where business rules are currently managed, the challenges faced, and the desired outcomes. Engaging stakeholders from various departments can help gather diverse perspectives and requirements.

Choosing the Right BRMS Solution

After assessing business needs, the next step is selecting a BRMS solution that aligns with those needs. Factors to consider include scalability, integration capabilities, user-friendliness, and support. Organizations should evaluate multiple vendors and solutions to find the best fit.

Designing the Rule Set

Once the BRMS solution is chosen, organizations must design the rule set. This involves defining business rules based on the organization's objectives and regulations. It's essential to involve business analysts and stakeholders in this process to ensure that the rules are comprehensive and relevant.

Testing and Validation

Before deploying the BRMS, thorough testing and validation of the rules are critical. This ensures that the rules behave as intended and produce the desired outcomes. Testing should include various scenarios to cover different use cases.

Training and Change Management

Implementing a BRMS often requires changes in workflows and processes. Providing training for

users and establishing a change management strategy can facilitate a smoother transition and encourage adoption. Stakeholder buy-in is crucial for the long-term success of the system.

Future Trends in Business Rules Management Systems

The landscape of business rules management systems is continually evolving. Here are some trends that are shaping the future of BRMS:

Integration with Artificial Intelligence

As artificial intelligence (AI) technologies advance, integrating AI with BRMS is becoming more prevalent. AI can enhance decision-making capabilities by analyzing large datasets and identifying patterns that inform business rules.

Increased Use of Natural Language Processing

Natural language processing (NLP) is making it easier for non-technical users to define and manage business rules. This technology allows users to write rules in plain language, which can then be converted into executable code by the BRMS.

Cloud-Based Solutions

Cloud-based BRMS solutions are gaining popularity due to their scalability and accessibility. These solutions enable organizations to manage business rules from anywhere, facilitating collaboration and remote work.

Focus on Low-Code Development

The rise of low-code development platforms is simplifying the process of creating and managing business rules. These platforms empower business users to participate in rule development without requiring extensive technical knowledge.

Conclusion

In a rapidly changing business environment, a business rules management system is indispensable for organizations looking to enhance agility, compliance, and operational efficiency. By understanding the components, benefits, and implementation strategies of a BRMS, businesses can better harness the power of automation and data-driven decision-making. As technology continues to advance, staying informed about future trends will be crucial for organizations aiming to leverage BRMS for sustained competitive advantage.

Q: What is a business rules management system?

A: A business rules management system (BRMS) is a software solution that enables organizations to define, manage, and execute business rules in a centralized manner, improving decision-making efficiency and compliance.

Q: What are the main components of a BRMS?

A: The main components of a BRMS include a rule repository, rule engine, user interface, and integration capabilities with other systems.

Q: How can a BRMS improve business agility?

A: A BRMS improves business agility by allowing organizations to quickly update and deploy business rules in response to changes in the business environment, regulations, or market conditions.

Q: What benefits does a BRMS provide?

A: A BRMS provides benefits such as improved agility, enhanced compliance, reduced operational costs, increased transparency, and better decision-making capabilities.

Q: How do organizations implement a BRMS?

A: Organizations implement a BRMS by assessing business needs, selecting the right solution, designing the rule set, testing and validating the rules, and providing training for users.

Q: What future trends are influencing BRMS?

A: Future trends influencing BRMS include integration with artificial intelligence, increased use of natural language processing, cloud-based solutions, and a focus on low-code development.

Q: Can non-technical users manage business rules in a BRMS?

A: Yes, many modern BRMS solutions are designed with user-friendly interfaces that allow non-technical users to manage business rules without extensive programming knowledge.

Q: How does a BRMS enhance compliance?

A: A BRMS enhances compliance by automating the enforcement of business rules related to regulations and policies, reducing the risk of human error and ensuring adherence to standards.

Q: What is the role of the rule engine in a BRMS?

A: The rule engine in a BRMS is responsible for executing the business rules defined in the repository, evaluating them against incoming data, and determining the appropriate actions based on the rules.

Q: Why is training important for BRMS implementation?

A: Training is essential for BRMS implementation because it ensures that users understand how to effectively use the system, manage business rules, and adapt to any changes in workflows.

business rules management system: Business Rules Management and Service Oriented Architecture Ian Graham, 2007-02-06 Business rules management system (BRMS) is a software tools that work alongside enterprise IT applications. It enables enterprises to automate decision-making processes typically consisting of separate business rules authoring and rules execution applications. This proposed title brings together the following key ideas in modern enterprise system development best practice. The need for service-oriented architecture (SOA). How the former depends on component-based development (CBD). Database-centred approaches to business rules (inc. GUIDES). Knowledge-based approaches to business rules. Using patterns to design and develop business rules management systems Ian Graham is an industry consultant with over 20 years. He is recognized internationally as an authority on business modelling, object-oriented software development methods and expert systems. He has a significant public presence, being associated with both UK and international professional organizations, and is frequently quoted in the IT and financial press.

business rules management system: Business Rules: Management and Execution Gladys S.W. Lam, Ronald G. Ross, Kristen Seer, Mark Norton, David Lyalin, and Warren Williams, 2020-03-17 Business rules describe the operations, definitions and constraints that apply to an organization. Business rules can apply to people, processes, corporate behavior and computing systems in an organization, and are put in place to help the organization achieve its goals. Business Rules: Why Should You Use Them? This book helps corporate business readers to understand the meaning and impact of Business Rules within a variety of applications or scenarios such as: Why and how to use a rules-based approach to validate, transform, recalculate, and remediate complex applications The art of managing rules and terminology in a consistent, business-friendly, and shareable way How to use a rules engine to achieve uniformity, consistency, continuous monitoring, transparency, flexibility, forecasting etc. Key technologies, vendors and implementers in this ecosystem.

business rules management system: The Business Rule Revolution Barbara Von Halle, 2006 Learn from an anthology of contributing authors and experts who share, step-by-step, how to justify and manage the ROI for the BR Approach. The book covers the business's perspective and the technology perspective. Authors represent the healthcare industry, financial services experience,

state and federal government experience, and senior practitioners spanning many industries. This book accomplishes the following: 1) It is for managers and decision-makers who make things happen in their organization. 2) It addresses BRs as a leverage for agility, compliance, and corporate intelligence, as a key mechanism for engineering the business itself. 3) It is not meant to be read cover-to-cover. Business people will focus on section 2. Technical people will focus on section 3. 4) Together, the sections provide a step-by-step management approach that crosses business and IT barriers. 5) Real case studies are written by real people in well-respected corporations, government agencies, consultancies, and software vendors. 6) Leading technology is highlighted. 7) Present the possibilities that BR Approach can achieve for both business and IT

business rules management system: Agile Business Rule Development Jérôme Boyer, Hamed Mili, 2011-03-23 Business rules are everywhere. Every enterprise process, task, activity, or function is governed by rules. However, some of these rules are implicit and thus poorly enforced, others are written but not enforced, and still others are perhaps poorly written and obscurely enforced. The business rule approach looks for ways to elicit, communicate, and manage business rules in a way that all stakeholders can understand, and to enforce them within the IT infrastructure in a way that supports their traceability and facilitates their maintenance. Boyer and Mili will help you to adopt the business rules approach effectively. While most business rule development methodologies put a heavy emphasis on up-front business modeling and analysis, agile business rule development (ABRD) as introduced in this book is incremental, iterative, and test-driven. Rather than spending weeks discovering and analyzing rules for a complete business function, ABRD puts the emphasis on producing executable, tested rule sets early in the project without jeopardizing the quality, longevity, and maintainability of the end result. The authors' presentation covers all four aspects required for a successful application of the business rules approach: (1) foundations, to understand what business rules are (and are not) and what they can do for you; (2) methodology, to understand how to apply the business rules approach; (3) architecture, to understand how rule automation impacts your application; (4) implementation, to actually deliver the technical solution within the context of a particular business rule management system (BRMS). Throughout the book, the authors use an insurance case study that deals with claim processing. Boyer and Mili cater to different audiences: Project managers will find a pragmatic, proven methodology for delivering and maintaining business rule applications. Business analysts and rule authors will benefit from guidelines and best practices for rule discovery and analysis. Application architects and software developers will appreciate an exploration of the design space for business rule applications, proven architectural and design patterns, and coding guidelines for using JRules.

business rules management system: Developments in Information & Knowledge Management for Business Applications Natalia Kryvinska, Aneta Poniszewska-Marańda, 2021-06-28 This book provides practical knowledge on different aspects of information and knowledge management in businesses. For enterprises/businesses those intend to remain prosperous and prolific, it is critically important to share best practices, ensure efficient information flow across company, capturing shared knowledge centrally, and communicate compliance rules, i.e. managing competently information in general. It enables faster and better decisions by helping employees' to build a strong expertise and by avoiding duplicated projects. Thus, the second volume of this series subtitle continues to explore different aspects of information and knowledge handling as well as doing business with information. We survey further the key aspects of managerial implications of the informational business. The novel methodologies and practices for the business information processing as well as application of mathematical models to the business analytics and efficient management are examined.

business rules management system: Smart Enough Systems James Taylor, Neil Raden, 2007-06-29 "Automated decisions systems are probably already being used in your industry, and they will undoubtedly grow in importance. If your business needs to make quick, accurate decisions on an industrialized scale, you need to read this book." Thomas H. Davenport, Professor, Babson College, Author of Competing on Analytics The computer-based systems most organizations rely on

to support their businesses are not very smart. Many of the business decisions these companies make tend to be hidden in systems that make poor decisions, or don't make them at all. Further, most systems struggle to keep up with the pace of change. The answer is not to implement newer, "intelligent" systems. The fact is that much of today's existing technology has the potential to be "smart enough" to make a big difference to an organization's business. This book tells you how. Although the business context and underlying principles are explained in a nontechnical manner, the book also contains how-to guidance for more technical readers. The book's companion site, www.smartEnoughSystems.com, has additional information and references for practitioners as well as news and updates. Additional Praise for Smart (Enough) Systems "James Taylor and Neil Raden are on to something important in this book-the tremendous value of improving the large number of routine decisions that are made in organizations every day." Dr. Hugh J. Watson, Chair of Business Administration, University of Georgia "This is a very important book. It lays out the agenda for business technology in the new century-nothing less than how to reorganize every aspect of how a company treats its customers." David Raab, President, ClientXClient "This book is an important contribution to business productivity because it covers the opportunity from both the business executive's and technologist's perspective. This should be on every operational executive's and every CIO's list of essential reading." John Parkinson, Former CTO, Capgemini, North American Region "This book shows how to use proven technology to make business processes smarter. It clearly makes the case that organizations need to optimize their operational decisions. It is a must-have reference for process professionals throughout your organization." Jim Sinur, Chief Strategy Officer, Global 360, Inc.

business rules management system: Web Information Systems Engineering - WISE 2005 Anne H.H. Ngu, Masaru Kitsuregawa, Erich Neuhold, Jen-Yao Chung, Quan Z. Sheng, 2005-10-24 This book constitutes the proceedings of the 6th International Conference on Web Information Systems Engineering, WISE 2005, held in New York, NY, USA, in November 2005. The 30 revised full papers and 20 revised short papers presented together with 18 poster papers were carefully reviewed and selected from 259 submissions. The papers are organized in topical sections on Web mining, Web information retrieval, metadata management, ontology and semantic Web, XML, Web service method, Web service structure, collaborative methodology, P2P, ubiquitous and mobile, document retrieval applications, Web services and e-commerce, recommendation and Web information extraction, P2P, grid and distributed management, and advanced issues. The presentation is rounded off by 14 industrial papers and the abstracts of 4 tutorial sessions.

business rules management system: Flexible Decision Management with Business Rules on IBM z Systems Mark Hiscock, Guy Hindle, Mike Johnson, Tim Wuthenow, James Taylor, David Griffiths, Graeme Everton, IBM Redbooks, 2015-06-26 The IBM® Operational Decision Manager product family provides value to organizations that want to improve the responsiveness and precision of automated decisions. This decision management platform on IBM z/OS® provides comprehensive automation and governance of operational decisions that are made within mainframe applications. These decisions can be shared with other cross-platform applications, providing true enterprise decision management. This IBM Redbooks® publication makes the case for using Operational Decision Manager for z/OS and provides an overview of its components. It is aimed at IT architects, enterprise architects, and development managers looking to build rule-based solutions. Step-by-step guidance is provided about getting started with business rules by using a scenario-based approach. This book provides detailed guidelines for testing and simulation and describes advanced options for decision authoring. Finally, it describes and documents multiple runtime configuration options. This third edition, SG24-8014-02, of this IBM Redbooks publication updated the information presented in this book to reflect function available in IBM Operational Decision Manager for z/OS Version 8.7.1.

business rules management system: z/OS Traditional Application Maintenance and Support Jonathan Sayles, Chris Rayns, Vijay Sankar, John Milne, Deena Stein, Debasish Dash, Ofer Pharhi, IBM Redbooks, 2011-06-23 In this IBM® Redbooks® publication, we attempt to provide fresh insight into a problem domain that, in the authors' opinions, has been pushed to the back burner of technology writing for far too long—the domain of z/OS® (traditional) mainframe maintenance and production support. Since the mid-1980's, outside of a few websites and publications, this still-critical area of software has barely even received lip service by the world of mainstream technology media. In a small way, we are attempting address this situation. In this book, we provide information in what and how to sections on the value of z/OS maintenance and support—not the value of the software, which is hardly in question, but the value of the software developers, and how they collaborate, analyze, code, and test the applications, fixes, and enhancements under their responsibility. We present new 21st Century tools to help them achieve their goals more easily and effectively. These tools integrate and provide a $1 + 1 + 1 = 5$ value-proposition, for companies that are still doing work the way they did when in the mid-1970's, when Gerald Ford was president of the United States. We are also describing, to a lesser extent, how you can effectively integrate the new tools with your existing development software stack, in order to find points of complimentary functionality. And we describe the new agile development and maintenance methodologies, and best practices for tools use and adoption. We hope that you find this work useful, and perhaps that it can fuel more discussion, future Redbooks publications, and other publications by IBM, or any vendor or group interested in this critical and vastly under-acknowledged technology domain.

business rules management system: From Active Data Management to Event-Based Systems and More Kai Sachs, Ilia Petrov, Pablo Guerrero, 2010-11-18 Data management has evolved over the years from being strictly associated with database systems, through active databases, to become a topic that has grown beyond the scope of a single field encompassing a large range of subjects, such as distributed systems, event-driven systems, and peer-to-peer and streaming systems. The present collection of works, which sheds light on various facets of data management, is dedicated to Prof. Alejandro Buchmann on the occasion of his 60th birthday. His scientific path looks back on more than thirty years of successful academic life and high-impact research. With this book we celebrate Prof. Buchmann's vision and achievements.

business rules management system: Advances in Conceptual Modeling Jeffrey Parsons, Dickson Chiu, 2014-12-15 This book constitutes the refereed proceedings of workshops, held at the 32nd International Conference on Conceptual Modeling, ER 2013, in Hong Kong, China in November 2013. The 30 revised full papers were carefully reviewed and selected out of 57 submissions. The papers are organized in sections related to the individual workshops: LSAWM, Legal and Social Aspects in Web Modeling; MoBiD, 1st International Workshop on Modeling and Management of Big Data; RIGiM, 5th International Workshop on Requirements, Intentions and Goals in Conceptual Modeling; SeCoGIS, 7th International Workshop on Semantic and Conceptual Issues in Geographic Information Systems; WISM, 10th International Workshop on Web Information Systems Modeling; DaSeM, Data Mining and Semantic Computing for Object Modeling; SCME, 1st Symposium on Conceptual Modeling Education; and PhD Symposium. Continuing the ER tradition, the ER 2013 workshops provided researchers, students, and industry professionals with a forum to present and discuss emerging, cutting-edge topics related to conceptual modeling and its applications.

business rules management system: AI and Business Rule Engines for Excel Power Users Paul Browne, Alex Porcelli, 2023-03-31 A power-packed manual to enhance your decision-making with the application of Business Rules using KIE, Drools, Kogito, MS Excel, Power Automate, Office Script, and MS Forms Purchase of the print or Kindle book includes a free PDF eBook Key FeaturesExplore the business rule tools by implementing real-world examples to write sophisticated rulesDiscover how decision services solve current business challenges using AICombine rules with workflows and scripting to deploy a cloud-based production environmentBook Description Microsoft Excel is widely adopted across diverse industries, but Excel Power Users often encounter limitations such as complex formulas, obscure business knowledge, and errors from using

outdated sheets. They need a better enterprise-level solution, and this book introduces Business rules combined with the power of AI to tackle the limitations of Excel. This guide will give you a roadmap to link KIE (an industry-standard open-source application) to Microsoft's business process automation tools, such as Power Automate, Power Query, Office Script, Forms, VBA, Script Lab, and GitHub. You'll dive into the graphical Decision Modeling standard including decision tables, FEEL expressions, and advanced business rule editing and testing. By the end of the book, you'll be able to share your business knowledge as graphical models, deploy and execute these models in the cloud (with Azure and OpenShift), link them back to Excel, and then execute them as an end-to-end solution removing human intervention. You'll be equipped to solve your Excel queries and start using the next generation of Microsoft Office tools. What you will learn

- Use KIE and Drools decision services to write AI-based business rules
- Link Business Rules to Excel using Power Query, Script Lab, Office Script, and VBA
- Build an end-to-end workflow with Microsoft Power Automate and Forms while integrating it with Excel and Kogito
- Collaborate on and deploy your decision models using OpenShift, Azure, and GitHub
- Discover advanced editing using the graphical Decision Model Notation (DMN) and testing tools
- Use Kogito to combine AI solutions with Excel

Who this book is for
This book is for Excel power users, business users, and business analysts looking for a tool to capture their knowledge and deploy it as part of enterprise-grade systems. Working proficiency with MS Excel is required. Basic knowledge of web technologies and scripting would be an added advantage.

business rules management system: *Decision Management Systems* James Taylor, 2011-10-13 A very rich book sprinkled with real-life examples as well as battle-tested advice.” —Pierre Haren, VP ILOG, IBM James does a thorough job of explaining Decision Management Systems as enablers of a formidable business transformation.” —Deepak Advani, Vice President, Business Analytics Products and SPSS, IBM Build Systems That Work Actively to Help You Maximize Growth and Profits Most companies rely on operational systems that are largely passive. But what if you could make your systems active participants in optimizing your business? What if your systems could act intelligently on their own? Learn, not just report? Empower users to take action instead of simply escalating their problems? Evolve without massive IT investments? Decision Management Systems can do all that and more. In this book, the field's leading expert demonstrates how to use them to drive unprecedented levels of business value. James Taylor shows how to integrate operational and analytic technologies to create systems that are more agile, more analytic, and more adaptive. Through actual case studies, you'll learn how to combine technologies such as predictive analytics, optimization, and business rules—improving customer service, reducing fraud, managing risk, increasing agility, and driving growth. Both a practical how-to guide and a framework for planning, Decision Management Systems focuses on mainstream business challenges. Coverage includes Understanding how Decision Management Systems can transform your business Planning your systems “with the decision in mind” Identifying, modeling, and prioritizing the decisions you need to optimize Designing and implementing robust decision services Monitoring your ongoing decision-making and learning how to improve it Proven enablers of effective Decision Management Systems: people, process, and technology Identifying and overcoming obstacles that can derail your Decision Management Systems initiative

business rules management system: *Advances in Databases and Information Systems* Johann Eder, Hele-Mai Haav, Ahto Kalja, Jaan Penjam, 2005-09-21 The 9th East-European Conference on Advances in Databases and Information Systems was held on September 12-15, 2005, in Tallinn, Estonia. It was organized in a cooperation between the Institute of Cybernetics at Tallinn University of Technology, the Department of Computer Engineering of Tallinn University of Technology, and the Moscow chapter of ACM SIGMOD. The main objective of the ADBIS series of conferences is to provide a forum for the dissemination of excellent research accomplishments and to promote interaction and collaboration between the Database and Information Systems research communities from Central and East European countries and the rest of the world. The ADBIS conferences provide an international platform for the

presentation of research on database theory, the development of advanced DBMS technologies, and their advanced applications in particular in information systems. The 2005 conference continued the ADBIS conferences held in St. Petersburg (1997), Poznan (1998), Maribor (1999), Prague (2000), Vilnius (2001), Bratislava (2002), Dresden (2003), and Budapest (2004). The conference consisted of regular sessions with technical contributions reviewed and selected by an international Program Committee, as well as of invited talks and tutorials given by leading scientists. For the first time the ADBIS conferences had a satellite event, a workshop on data mining and knowledge discovery. The ADMKD 2005 workshop, with its own international Program Committee as well as proceedings, served as a forum to encourage researchers and practitioners to discuss and investigate data mining research and implementation issues, and to share experience in developing and deploying data mining systems.

business rules management system: *Business Process Management (BPM)* Bernhard Hitpass, 2014-07-07 Nowadays, an organization is expected to be not only effective and efficient, as it was formerly. Now, in addition, it should be able to adapt to the frequent changes driven by globalization, let us say, be agile. This business agility has become more important in these times of globalization. The organization that best responds to the fast-changing market, which is becoming increasingly frequent, will have better competitive advantages than those that fail to sustain the pace imposed by globalization. What are the tools that organizations are using to better achieving agility, effectiveness, and efficiency? The answer is more control and efficiency with the ability to manage change in their business processes, because these can create value for customers. BPM is an integrative discipline that comprises management disciplines and techniques. It involves the business layers and technology, including also management through processes, as an integrated whole. The structure of this book consists of two parts. «Part I, Fundamentals of BPM» describe the state of the art of the major BPM theoretical concepts. «Part II, Implementation for BPM» is dedicated to presenting the concepts of implementation, developed largely by the author. This second part considers the technological support in each of the BPM layers. The author shows how to implement the core principles of the discipline, which differs itself from traditional management. This book is for all professionals, whether they perform in the public, private or non-profits sectors who require or want to learn more about this process management discipline. It is also for students and academics of the industrial and computer sciences, and to all the business and administration Schools.
