Their responses provide valuable lessons for the future – for airlines, for related industries, and for all sectors that find unexpected upheaval suddenly in their path. As a truly global business, the airline industry offers countless lessons in navigating uncertainty and the necessity of continual business transformation. The Airline Industry - A Comprehensive Overview: Dynamic Trends and Transformations is an up-to-date 'state of the nation' perspective on the airline industry. Its dedicated and detailed focus on airlines makes the book an invaluable tool in deciphering how airlines have been run and managed to date and provides a roadmap for the future evolution of the industry. The author has interviewed countless airline and related industry professionals in their respective fields of expertise, which adds layers of real-world insight to every chapter. Written in a

lively and accessible style that will appeal to readers whether they are in academia or the airline industry, *The Airline Industry - A Comprehensive Overview: Dynamic Trends and Transformations* is essential reading for airline employees and undergraduate and postgraduate students and a vital point of reference for lecturers and researchers, economists, and business analysts looking for a thorough and commercial guide to the airline industry.

china eastern air business class: *The Global Commercial Aviation Industry* Sören Eriksson, Harm-Jan Steenhuis, 2015-07-16 This book provides a state-of-the-art overview of the changes and development of the civil international aircraft/aviation industry. It offers a fully up-to-date account of the international developments and structure in the aircraft and aviation industries from a number of perspectives, which include economic, geographical, political and technological points of view. The aircraft industry is characterized by very complex, high technology products produced in relatively small quantities. The high-technology requirements necessitate a high level of R&D. In no other industry is it more of inter-dependence and cross-fertilisation of advanced technology. Consequently, most of the world's large aircraft companies and technology leaders have been located in Europe and North America. During the last few decades many developing countries have tried to build up an internationally competitive aircraft industry. The authors study a number of important issues including the political economy of the aircraft industry, globalization in this industry, innovation, newly industrializing economies and the aircraft industry. This book also explores regional and large aircraft, transformation of the aviation industry in Central and Eastern Europe, including engines, airlines, airports and airline safety. It will be of great value to students and to researchers seeking information on the aircraft industry and its development in different regions.

china eastern air business class: *Airline Choices for the Future* Kostas Iatrou, Mauro Oretti, 2016-03-16 *Airline Choices for the Future: From Alliances to Mergers* offers an up-to-date assessment of the industry as it stands today, delivering a comprehensive insight into how the world of airline alliances is changing, and how the merger phenomenon is likely to fit into the new scenario. The purpose of this book is twofold. Firstly, it outlines the evolution and the reasons behind alliances between international air carriers, the alliances' track records and the way they have affected airlines and the air transport industry. Secondly, drawing on past and more recent developments in the industry, it examines the experiences airlines involved in cross-border mergers have gone through and the advantages and difficulties they have come across. Alliances and mergers are presented from both the airline and the consumer perspective. The book provides a balanced account of where mergers and alliances have taken the industry to date, bridging the gap between merger theory and implemented practices and strategies. It also identifies the challenges alliances and cross-border mergers have faced and highlights the key forces affecting airline development. Theoretical evidence is supplemented by data collected via surveys and interviews with airline executives, aviation experts, consultants and regulatory bodies.

china eastern air business class: *Chinese Railways* Katrin Luger, 2008-03-14 Although being huge by any measure, Chinese Railways are a bottleneck for economic growth in China. The state-owned enterprise returns a small profit but is severely capacity constrained and burdened with inefficiency. A comprehensive reform and efficiency improvement program needs to be developed in order to enable Chinese Railways to support further GDP growth in China. Application of industrial economics to the case of Chinese Railways suggests that moderate deregulation of e.g., the freight business could make Chinese Railways fit for future growth. Operational improvements need to complement this development, such as a redesign of the schedule or the introduction of value added services in the freight business. Based on interviews with Chinese experts, benchmarking with railways in the US, Germany, Russia, and Japan as well as broad coverage of Chinese-language sources, the book makes detailed recommendations on how to design a comprehensive turnaround program for Chinese Railways.

china eastern air business class: *The Economic Geography of Air Transportation* John T. Bowen, 2010-04-05 Drawing upon hundreds of mainly secondary sources, this book answers three questions: how did air transportation develop in the century after the Wright Brothers, what does it mean to live in an airborne world, and what is the future of aviation in this century?

china eastern air business class: *AIR CRASH INVESTIGATIONS - Inadvertent In-Flight Slat Deployment - The Near Crash of China Eastern Airlines Flight 583* Dirk Barreveld, 2015-11-28 On April 6, 1993, a China Eastern Airlines McDonnell Douglas MD-11, flight 583, on its way from Beijing, China, to Los Angeles, California, had an inadvertent deployment of the leading edge wing slats while in cruise flight, not far from Shemya, Alaska. The autopilot disconnected, and the captain was manually controlling the airplane when it progressed through several violent pitch oscillations and lost 5,000 feet of altitude. Two passengers were fatally injured, and 149 passengers and 7 crewmembers received various injuries. The airplane did not receive external structural damage, but the passenger cabin was substantially damaged. The National Transportation Safety Board determined that the probable cause of this accident was the inadequate design of the flap/slat actuation handle by the Douglas Aircraft Company that allowed the handle to be easily and inadvertently dislodged from the UP/RET position, thereby causing extension of the leading edge slats during cruise flight.

china eastern air business class: *Flight Of The Titans* Kenny Kemp, 2013-07-31 The gripping story of the biggest trade war in aviation history. In October 2007, the colossal Airbus A380, the largest commercial jet in history, will take to the skies. This gigantic double-decker is the first real competitor to Boeing's iconic 747 Jumbo Jet. Meanwhile, Boeing has thrown its weight behind the smaller 787 Dreamliner, an aircraft whose emphasis is on fuel economy and reduced emissions. The future of commercial air travel is in the balance, and the outcome is difficult to predict.

china eastern air business class: *Airlines in a Post-Pandemic World* Nawal K. Taneja, 2021-06-08 The COVID-19 pandemic represents an extraordinary inflection point that caught airlines worldwide unprepared, causing CEOs to recalibrate their business models. This book explains why this unprecedented pandemic is different from the past disruptions experienced by the airline industry during the past 50 years, and what airlines and related businesses now can do to adapt to the dramatically changed marketplace. This book presents two future scenarios: continuous

improvements and elastic supply. These are considered in three specific contexts for the rebuilding of the airline business. These contexts, in the order of urgency with respect to change from the status quo, are the following. The first context is for airlines to become better prepared to deal with frequent and deeper disruptions that could be localized or globalized relating to such areas as climate change, geopolitics, and cybersecurity. The second context is to collaborate and integrate within the much broader travel ecosystem, possibly using platforms to innovate on new value systems. The third context, which has always been the case and drives the first two, is for airlines to offer real solutions to people's travel needs, solutions developed with imagination and turbocharged innovation, even as we contemplate new technology airplanes and mobility as a service solutions. This book is recommended reading for all senior-level practitioners of airlines and related businesses, as well as aviation policy makers worldwide.
