It explores a range of scenarios and strategies adopted in different parts of the world during the COVID-19 pandemic, and addresses new technological advances for investigating types of academic misconduct that are difficult to find, including translation plagiarism, contract cheating, the usage of the proctoring systems, and the innovative use of data mining to detect cheating on on-line quizzes. The work shows how working with students is an essential part of the fight against academic misconduct. The student voice can be a powerful source of motivation for students, but educators also need to understand their perspectives, especially regarding such an important topic as academic integrity.
