global business summit: Here for Good: Community Foundations and the Challenges of the 21st Century Terry Mazany, David C. Perry, 2014-12-18
Community foundations bring together the resources of individuals, families, and businesses to support effective nonprofits in their communities. Over the years, foundations have come to engage community problem-solving through more than just grant-making. They have added a rich array of other activities, including programs of community capacity building, active modes of advocacy, and centres for meeting. In 2011, the 700+ institutions in the United States gave an estimated \$4.2 billion to a variety of nonprofit activities in fields that included the arts and education, health and human services, the environment, and disaster relief. The origins of this book stem from conversations among the leadership of community foundations about the challenges they must overcome in order to make such foundational contributions to their communities. As community foundations enter the second century of their existence (the first foundation was formed in Cleveland in 1914), the need for knowledge and best practices has never been greater. This book, with expert authors representing the best and the brightest in this important field, fills that need.

global business summit: Indian Business Case Studies Volume IV Priti Pachpande, Sham Bachhav, 2022-06-16
It has been decades since many business schools outside India adopted the case study methodology for teaching almost all branches of management studies. This trend has been seen in India, too, where top management institutes have implemented the case study-based methodology as an important pedagogical tool in business education. The major issue in India, however, is a severe shortage of Indian case studies through which business schools can provide industry insights to students. This volume fills that gap. It has twenty Indian cases related to different aspects of business management. The cases cover some of the prominent disciplines of management like marketing, finance, human resource management, strategy management, operations management, accounting, and mergers and acquisitions. These cases best serve the purpose of adoption of 'case methodology' in classroom teaching or online lecture sessions for the faculty and students of business management.

global business summit: *Museums and Societal Collapse* Robert R. Janes, 2023-10-02
Museums and Societal Collapse explores the implications of societal collapse from a multidisciplinary perspective and considers the potential museums have to contribute to the reimagining and transitioning of a new society with the threat of collapse. Arguing that societal collapse is underway, but that total collapse is not inevitable, Janes maintains that museums are well-positioned to mitigate and adapt to the disruptions of societal collapse. As institutions of the commons, belonging to and affecting the public at large, he contends that museums are both responsible and capable of contributing to the durability and well-being of individuals, families, and communities, and enhancing societal resilience in the face of critical issues confronting our species. Within the pages of this groundbreaking book, Janes demonstrates how museums and their staff, as key civic resources with ethical responsibilities, can examine the meaning and value of their work, how that work is organized and managed, and to what end. This is a call to action, demonstrating how museums can move the conversation about collapse into society at large. *Museums and Societal Collapse* will be essential reading for museum professionals working in museums and galleries, as well as for cultural and civil society organizations around the world. It will also be an essential reading for academics and students of Museum and Heritage Studies, Gallery Studies, Heritage Management, and Arts Management.

global business summit: *Wealth Creation* Shanna E. Ratner, 2019-11-06 A new approach to rural development is emerging. Instead of being about attracting companies that might create jobs over which communities have no control, the emerging paradigm is about connecting the unique underutilized assets of place with market opportunity to grow assets that are owned and controlled by and for the benefit of low-wealth people and places. But asset development is about more than bricks and mortar or narrowly defined financial assets. There are many kinds of assets that communities require to thrive – such as social capital, natural capital, political capital, and intellectual capital. The emerging new approach to rural development is, then about broadening the definition of wealth, engaging underutilized assets, and a key third element: harnessing the power of the market – rather than relying solely on philanthropy and government. *Wealth Creation* provides a conceptual guide with practical examples for policymakers, practitioners of economic and community development, community organizers, environmentalists, funders, investors, and corporations seeking a values-based framework for identifying self-interests across sectors that can lead to opportunities to transform existing systems for the collective good.
