haystack digital business card: Student Guide to Research in the Digital Age Leslie Stebbins, 2005-12-30 One of the most perplexing aspects of research today is what to do when there's too much information on a topic. What then of the librarian, charged with teaching new generations to appreciate the search for intellectual wheat, especially when the chaff has greater appeal? The key, suggests Leslie Stebbins, is to impress upon students the importance of good filtering instincts and careful management of search results. At the same time, it is equally essential to impress upon them the particular challenges and controversies that accompany research in a digital environment. Chapter one provides a step-by-step introduction to both research and critical evaluation that can be followed for any assignment. Chapters two through seven focus on specific types of information resources: when to use them, where to find them, and how to evaluate them. Chapter eight offers guidance on how to develop a note-taking system, cite sources, avoid plagiarism, and organize references. Students and librarians alike will benefit from Stebbin's suggestions, strategies and straightforward examples.

haystack digital business card: Digital Media Stacey O'Neal Irwin, 2016-04-29 Digital Media: Human-Technology Connection examines what it is like to be alive in today's technologically textured world and showcases specific digital media technologies that make this kind of world possible. So much of human experience occurs through digital media that reflection on the process and proliferation of digital consumption has become necessary. This book takes on that task through an interdisciplinary array of sources including philosophy, media studies, film studies, media ecology, and philosophy of technology. When placed in the interpretive lenses of artifact, instrument, and tool, digital media can be studied in a uniquely different way that pushes the boundaries on production, distribution, and communication and alters the way humans and technology connect with each other and the world. In the first section, Raw Materials, Stacey O'Neal Irwin examines pertinent concepts like digital media, philosophy of technology, phenomenology and postphenomenology. In the second, Feeling the Weave, Irwin uses the postphenomenological framework, to explore empirical cases focused on deep analysis of screens, sound, photo manipulation, data-mining, aggregate news and self-tracking. Postphenomenological concepts like multistability, variational theory, microperception, macroperception, embodiment, technological mediation are explored. Digital Media demonstrates that digital media technologies and digital content are not neutral. They texture the world in multiple and varied ways that transform human abilities, augment experience, and pattern the world in significant ways.

haystack digital business card: Advanced Metaheuristic Methods in Big Data Retrieval and Analytics Bouarara, Hadj Ahmed, Hamou, Reda Mohamed, Rahmani, Amine, 2018-11-02 The amount of data shared and stored on the web and other document repositories is steadily on the rise. Unfortunately, this growth increases inefficiencies and difficulties when trying to find the most relevant and up-to-date information due to unstructured data. Advanced Metaheuristic Methods in Big Data Retrieval and Analytics examines metaheuristic techniques as an important alternative model for solving complex problems that are not treatable by deterministic methods. Recent studies suggest that IR and biomimicry can be used together for several application problems in big data and internet of things, especially when conventional methods would be too expensive or difficult to implement. Featuring coverage on a broad range of topics such as ontology, plagiarism detection, and machine learning, this book is ideally designed for engineers, graduate students, IT professionals, and academicians seeking an overview of new trends in information retrieval in big data.

haystack digital business card: Publishing in the Digital Age Michael N. Ross, 2021-10-17 The world of publishing is evolving at an ever-increasing speed, with developments in digital workstreams and products, customer expectation, enriched content curation, and user-generated content becoming commonplace. In Publishing in the Digital Age: How Business Can Thrive in a Rapidly Changing Environment, Ross discusses the most significant and recent developments in educational and trade publishing, educational technology, and marketing that has enabled a new

generation of content creators to reach more consumers. It is the only book that addresses disruption in the industry head on. Building on the insights from his last book, *Dealing with Disruption: Lessons from the Publishing Industry*, Ross takes a fresh look at the publishing environment and provides the reader with a clear view of how publishing has evolved and how it has benefitted consumers regardless of their preferred medium for accessing knowledge. Through an examination of what has worked and what has not, and with Ross's unique perspective of more than 35 years of publishing success, *Publishing in the Digital Age* presents an indispensable overview of the publishing industry, how it has evolved during the first quarter of the 21st century, and how publishers, content providers, and consumers can benefit from the many options that are available today. With insights from industry leaders, Ross discusses new opportunities on the Web, streaming services, and audio formats. He reviews new publishing platforms and provides a practical guide for content developers to address the knowledge needs of their constituents by giving readers real-life, actionable examples of how best to publish their content consistent with users' purchasing preferences. The book will be of interest to specialists in education: K-12 and higher education, the non-fiction trade, corporate education trainers, and specialist sectors such as scholarly, technical, and medical publishing. It includes clear applications for any business that is undergoing transformation or is forced to make a radical pivot because of sudden environmental changes or market conditions.

haystack digital business card: *The Internet of Elsewhere* Cyrus Farivar, 2011 Through the lens of culture, *The Internet of Elsewhere* looks at the role of the Internet as a catalyst in transforming communications, politics, and economics. Cyrus Farivar explores the Internet's history and effects in four distinct and, to some, surprising societies--Iran, Estonia, South Korea, and Senegal. He profiles Web pioneers in these countries and, at the same time, surveys the environments in which they each work. After all, contends Farivar, despite California's great success in creating the Internet and spawning companies like Apple and Google, in some areas the United States is still years behind other nations. Surprised? You won't be for long as Farivar proves there are reasons that: Skype was invented in Estonia--the same country that developed a digital ID system and e-voting; Iran was the first country in the world to arrest a blogger, in 2003; South Korea is the most wired country on the planet, with faster and less expensive broadband than anywhere in the United States; Senegal may be one of sub-Saharan Africa's best chances for greater Internet access. *The Internet of Elsewhere* brings forth a new complex and modern understanding of how the Internet spreads globally, with both good and bad effects.

haystack digital business card: *Educating the First Digital Generation* Paul G. Harwood, Victor Asal, 2007-08-30 Asal and Harwood explore how today's information technology is changing how we educate and are educated. Focusing on the United States, with useful insights from the classroom digital revolution in a few other key places (the United Kingdom, Australia, and India), the authors investigate the impact of today's technologies on education — how they impact teachers and teaching, children and learning, and the intersection of teaching and learning. For example, they tell us what the educational impact of having over 60% of America online is. The authors explain exactly how new technologies are changing the learning environment in and out of the classroom with a focus on the effects on K-12 education. Chapters include vignettes about children who are integrating information technologies into their lives at school and at home and those children who for a variety of reasons, most notably, socio-economic, have found themselves excluded as full members of the first digital generation. There are also accounts from K-12 teachers who are incorporating technology into their classroom environments. Using closed-circuit cameras, electronic cheating, and distance learning are all also discussed at length.

haystack digital business card: *Digital Decision Making* Ray Corrigan, 2007-07-05 Since the general public began to use the Internet in the mid 1990s, there has been a vast amount of investment by governments and commerce in digital communications technologies. There has also been a fair degree of confusion and sometimes controversy about the purpose and effectiveness of such technologies, for example the proposed UK identity card system. The far-reaching implications

for commerce and society of some of these decisions in invisible or opaque specialist fields, however, mean they should be matters of concern for every citizen. This book argues: Decisions should be based on an understanding of the systems, technology and environment within which they operate. Experts and ordinary people should work together. Technology and law are evolving in restrictive rather than enabling ways. It aims, to stimulate an awareness of the issues and be a readable, challenging and informative introduction, both for university students and the general reader, to processes surrounding developments in technology and law.
