ifs business: Mumbai - An International Financial Centre India. Ministry of Finance. High Powered Expert Committee, 2007-04-19 Most financial services are now tradable across borders in an extremely competitive environment with buyers and sellers around the world having a choice of procuring services from competing international financial centres. The global international financial services (IFS) market in the 21st century is one in which competition is driven by rapid innovation in financial products, services, instruments, structures, and arrangements to accommodate and manage myriad requirements, risks and a ceaseless quest for cost reduction. Competitive advantage in IFS provision depends on seven key factors:- An extensive national, regional, global network of corporate and government client connections possessed by financial firms participating in an international finance centre- High level human capital specialized in finance, supported by a numerate labour force.- World-class telecommunications infrastructure- State-of-the-art IT systems- A well-developed, sophisticated open financial system- A system of financial regime governance that is amenable to operating on global 'best-practice' lines and standards- A 'hinterland advantage' in terms of either a national or regional economy (preferably both) whose growth is generating rapid growth in demand for IFSThe Ministry of Finance, Government of India established a High Powered Expert Committee in 2006 to study the feasibility of India's entry into the global market for IFS and that of Mumbai becoming an IFC. The Committee's report analyses Mumbai's strengths and weaknesses in terms of the above seven key factors essential for the success of an IFC. The report strives to deliver a nuanced appreciation of the likely costs and benefits of the path to an IFC, based on an understanding of which policy-makers can make a reasoned choice.

ifs business: Considering the Consequences Jason Campbell Sharman, Percy S. Mistry, 2008

What have been the consequences of recent regulatory initiatives on international financial centers in small countries? This study of three small Commonwealth countries--Barbados, Mauritius and Vanuatu--suggests that the costs of implementing these new standards have exceeded any identifiable benefits for the countries concerned. The main factor explaining the adoption of the new standards, in all three countries, is the fear of being blacklisted by international organizations in the event of non-compliance, rather than any identified benefit in terms of increased competitiveness. The authors consider how policy on anti-money laundering should be developed in the future, taking into account the particular concerns of small developing countries. The book will be of interest to all those engaged in setting international standards for financial regulation, and those regulating the finance industry in both large and small countries.

ifs business: Built on Value Weiwei Huang, 2019-06-14 This book is open access under a CC BY-NC-ND 4.0 license. This book presents the concept of value as the central component to success and longevity of the global ICT industry player, Huawei. It provides examples of how Huawei focuses on customers to pursue sustainable and profitable growth rather than focusing on capital market valuation which is a familiar scenario among Western companies. It is the business departments that are the creators of value for Huawei, while the finance department is tasked to provide support and services to those business departments during the value creation process. The book illustrates how Huawei Finance sets rules, allocates resources, and builds centers of expertise all over the world to address future uncertainties. More than a decade ago Huawei dedicated seven years to implement the Integrated Financial Services (IFS) Transformation Program with the help of IBM consultants. This book also draws on the leading concepts and successful experience of the IFS Transformation Program. Huawei Finance adopts three types of centralized vertical management from the top down: treasury, accounting, and auditing. It does not transfer such central authority down to lower levels, but delegates all other authority to business organizations across all levels. This management model represents the focus of this book. Built on Value provides an overview of Huawei's finance management and will help academic researchers in Business/Management, as well as practitioners in industry, an accurate and in-depth understanding of Huawei as a company.

ifs business: The Report: Qatar 2015 Oxford Business Group, 2015-04-22 Qatar's sizable oil and natural gas reserves have underpinned its rapid economic growth over the past two decades. Home to the world's largest non-associated gas field, the country is the world's fourth-largest producer of dry natural gas and the largest producer of liquefied natural gas, with hydrocarbons revenues forming the bulk of national income as a result. Although the drop in global energy prices has impacted export revenues, rigorous economic diversification drives in recent years have paid dividends, and in 2015 non-hydrocarbons growth reached 7.7%, compared to a 0.1% contraction for hydrocarbons growth during the same period. The country's financial sector has continued to evolve; Islamic banking in particular has witnessed significant progress. Meanwhile, as the country gears up to host several important sporting events in the coming years, most notably the 2022 FIFA World Cup, numerous big-ticket infrastructure builds continue to expand the construction sector.

ifs business: Improving Service Level Engineering Roland Schütze, 2017-07-20 This book examines how fuzzy methods can be employed to manage service levels in business and IT alignment. It starts by mapping the dependencies of service level agreements, coming up with gradual and bi-polar concepts to eventually classify the level of coupling by intuitionistic fuzzy sets. The second part presents an approach to analyze the impact of service failures using intuitionistic fuzzy methods (IFSFA). Lastly, the third part of the book extends the concept towards business and IT-aligned service-level engineering and provides two use cases.

ifs business: *The Rating Agencies and Their Credit Ratings* Herwig Langohr, Patricia Langohr, 2010-04-01 Credit rating agencies play a critical role in capital markets, guiding the asset allocation of institutional investors as private capital moves freely around the world in search of the best trade-off between risk and return. However, they have also been strongly criticised for failing to spot the Asian crisis in the early 1990s, the Enron, WorldCom and Parmalat collapses in the early 2000s and finally for their ratings of subprime-related structured finance instruments and their role in the current financial crisis. This book is a guide to ratings, the ratings industry and the mechanics and economics of obtaining a rating. It sheds light on the role that the agencies play in the international financial markets. It avoids the sensationalist approach often associated with studies of rating scandals and the financial crisis, and instead provides an objective and critical analysis of the business of ratings. The book will be of practical use to any individual who has to deal with ratings and the ratings industry in their day-to-day job. Reviews Rating agencies fulfil an important role in the capital markets, but given their power, they are frequently the object of criticism. Some of it is justified but most of it portrays a lack of understanding of their business. In their book *The Rating Agencies and their Credit Ratings*, Herwig and Patricia Langohr provide an excellent economic background to the role of rating agencies and also a thorough understanding of their business and the problems they face. I recommend this book to all those who have an interest in this somewhat arcane but extremely important area. -Robin Monro-Davies, Former CEO, Fitch Ratings. At a time of unprecedented public and political scrutiny of the effectiveness and indeed the basic business model of the Credit Rating industry, and heightened concerns regarding the transparency and accountability of the leading agencies, this book provides a commendably comprehensive overview, and should provide invaluable assistance in the ongoing debate. -Rupert Atkinson, Managing Director, Head of Credit Advisory Group, Morgan Stanley and member of the SIFMA Rating Agency Task Force The Langohrs have provided useful information in a field where one frequently finds only opinions or misconceptions. They supply a firm base from which to understand changes now underway. A well-read copy of this monograph should be close to the desk of every investor, issuer and financial regulator, legislator or commentator. -John Grout, Policy and Technical Director, The Association of Corporate Treasurers
