indigo business solutions: *Indian Multinationals in the World Economy* Jaya Prakash Pradhan, 2008 Indian multinationals have been active in the world economy since early 1960s. However, their number and scale of operation have grown significantly in the last fifteen years or so. In the face of increasing global competition unleashed by extensive liberalization measures, Indian firms have adopted the strategy of outward foreign direct investment (OFDI) as an integral part of their business strategies. By undertaking greenfield OFDI and brownfield OFDI for acquiring foreign companies, Indian firms are enhancing their potential for growth and global competitiveness. Consequently India has emerged as a major developing source country of FDI and Indian multinationals are likely to affect world development in several ways. The book analyses the phenomenon of Indian multinationals from both macro level factors and firm-level corporate strategies and examines its implications for India and host countries. A detailed investigation of Indian overseas investment flows and stocks from sectoral, regional, ownership and motivational perspectives provides a rigorous long-run coverage of Indian multinational firms from 1970s onwards. The role of innovation, entrepreneurial skills, scale of business, productivity, and the role of government policies, received critical attention in explaining the emergence of Indian multinationals. The comprehensive quantitative and case studies approach offers valuable insights into the behaviour and impacts of these new global actors on home and host countries. This book offers a number of lessons to home country, host countries, and Indian enterprises becoming multinationals. With the growing global interest from policy makers, business practitioners, researchers, and students in Indian multinationals, this book would serve as an important and timely reading for all of them.

indigo business solutions: *New Industries from New Places* Neil Gregory, Stanley D. Nollen, Stoyan Tenev, 2009-03-19 Software comes from India, hardware comes from China. Why is that? Why did China and India take such different paths to global dominance in new high-tech industries? Will their paths continue to diverge or converge? How can other countries learn from their successes--and failures--in reaching global scale in new industries? To answer these questions, this book presents the first rigorous comparison of the growth of the IT industries in China and India, based on interviews with over 300 companies. It explains the different growth paths of the software and hardware sectors in each country, providing insights into the factors behind the emergence of China and India as global economic powers. It provides a compelling case study of how differences

in economic policies and the investment climate affect industrial growth. This book sheds new light on common debates on 'China versus India', on why India is the software capital of the world while China is a manufacturing powerhouse. It refutes common myths about the growth of these industries for example, the role of Non-Resident Indians or the Y2K problem in the growth of the Indian software industry, the role of government intervention in industrial growth, and the relative size of China and India's software industries.

indigo business solutions: *Organic Photochromes* A.V. El'tsov, 2012-12-06 Only a small part of the numerous photochemical reactions in organic compounds result in reversible structural changes. The latter are accom panied by a change in physical properties, in particular, of electronic spectra. It is tempting to try to use this photochromic effect in various systems for controlling and regulating light fluxes and for data recording. Eventually an independent trend emerged in photochemistry - the study of the photochromism of organic compounds to establish relationships between structure and photochemical behavior, the theoretical analysis of these relationships to predict structures with pre-set photochromic parameters, and, finally, the identification of suitable areas for the application of photochromism. This monograph summarizes the results of recent studies carried out by a number of research institutions in the USSR and the GDR. Devoted to an important aspect of applied photochemistry, this monograph contains a detailed exposition of the chemical photochromes referred to briefly in the earlier editions of Introduction to the Photochemistry of Organic Compounds (Khimiya Press, Moscow, 1976) and Photochemical Proces ses in Layers (Khimiya Press, Moscow, 1978).

indigo business solutions: Dawn of the Akashic Age Ervin Laszlo, Kingsley L. Dennis, 2013-05-20 A preview of the post-mechanistic, holistic world in 2020 and 2030 as well as a map of the obstacles we must overcome to get there • Reveals how the youngest generation is seeding the shift in consciousness • Explains how society will be reorganized into grassroots networks like those revealed by quantum physics and experienced through social media • With contributions from futurist John L. Petersen, ex-CEO of Sanyo Tomoya Nonaka, media activist Duane Elgin, and other visionaries The world is changing. The transition from the mechanistic worldview to one that recognizes the interconnectedness of all life is upon us. It is the dawning of the Akashic Age. The Akashic field that connects the universe is now recognized by cutting-edge science. What we know about communication, energy, and consciousness is rapidly evolving in tandem with the new quantum worldview. Many adults are consciously evolving to meet the transitional challenges at hand, while today’s youth have arrived already hard-wired with the new consciousness. Rising from the ashes of the old systems, this Phoenix generation of radical change agents is seeding our evolution and spiritual transformation, a process that will continue over the next few decades. Authors Ervin Laszlo and Kingsley Dennis look at the chief engine of the coming changes--the growing global understanding of nonlocality--and the development of practical applications for it. They examine how the new values and new consciousness taking hold will reorganize society from top-down hierarchies into grassroots networks like those revealed through quantum physics’ understanding of energy and information waves and experienced daily by millions through social media. With contributions from visionary thinkers such as futurist John L. Petersen, ex-CEO of Sanyo Tomoya Nonaka, media activist Duane Elgin, systems scientist Alexander Laszlo, and spiritual economist Charles Eisenstein, this book explores the future of education, spirituality, the media, economics, food, and planetary citizenship as well as the expansion of consciousness necessary to

reach that future.

indigo business solutions: *Strategic Airline Retailing and Solutions* Nawal K. Taneja, 2023-11-07 While airlines have been looking into the next generation of retailing practices for several years, developments since the beginning of 2020 have accelerated the need to take retailing to a new paradigm. A singular focus now is the ever-changing demands of the current and next generation of customers and employees and managing their values. Examples of customer needs include a mobile-first approach, rich content, augmented and personalized end-to-end services with seamless, consistent, and contextualized experiences. While these concepts of retailing are not new, the challenge has been in bringing them to reality due to (a) the constraints of legacy systems and processes while transitioning to next-generation retailing systems, (b) the inaccessibility of real-time data coming from a wide variety of sources such as online shopping, social media, and operations, (c) the inability to monitor real-time behavior of customers and employees, (d) the lack of effective collaboration and cooperation within the travel ecosystem, and (e) the increasing lack of trust on the part of customers. This book provides a framework and technologies to convert retailing concepts—from shopping to fulfillment—into reality by (a) renovating an airline's core and ancillary products, (b) progressing faster on digital and organizational transformation journeys to make better data-based decisions about retailing, (c) getting better at managing customer value by knowing who the customers are, (d) empowering, supporting, and listening to employees to meet their expectations, (e) asking the right questions to solve complex retailing problems relating to customers, competitors, and stakeholders, and (f) questioning common-held beliefs about the airline business. This book is indispensable for all airline executives and senior managers, as well as airline and airport commercial managers. It will also be enormously beneficial for retailers dealing with airlines and airports.
