integra business alternatives: **Neoliberal Resilience** Aldo Madariaga, 2020-09-01 An exploration of the factors behind neoliberalism's resilience in developing economies and what this could mean for democracy's future Since the 1980s, neoliberalism has withstood repeated economic shocks and financial crises to become the hegemonic economic policy worldwide. Why has neoliberalism remained so resilient? What is the relationship between this resiliency and the backsliding of Western democracy? Can democracy survive an increasingly authoritarian neoliberal capitalism? Neoliberal Resilience answers these questions by bringing the developing world's recent history to the forefront of our thinking about democratic capitalism's future. Looking at four decades of change in four countries once considered to be leading examples of effective neoliberal policy in Latin America and Eastern Europe—Argentina, Chile, Estonia, and Poland—Aldo Madariaga examines the domestic actors and institutions responsible for defending neoliberalism. Delving into neoliberalism's political power, Madariaga demonstrates that it is strongest in countries where traditional democratic principles have been slowly and purposefully weakened. He identifies three mechanisms through which coalitions of political, institutional, and financial forces have propagated neoliberalism's success: the privatization of state companies to create a supporting business class, the use of political institutions to block the representation of alternatives in congress, and the constitutionalization of key economic policies to shield them from partisan influence. Madariaga reflects on today's most pressing issues, including the influence of increasing austerity measures and the rise of populism. A comparative exploration of political economics at the peripheries of global capitalism, Neoliberal Resilience investigates the tensions between neoliberalism's longevity and democracy's gradual decline.

integra business alternatives: *Collaborative Business Ecosystems and Virtual Enterprises* Luis M. Camarinha-Matos, 2013-06-29 Towards collaborative business ecosystems Last decade was fertile in the emerging of new collaboration mechanisms and forms of dynamic virtual organizations, leading to the concept of dynamic business ecosystem, which is supported (or induced ?) by the progress of the ubiquitous pervasive computing and networking. The new technologies, collaborative business models, and organizational forms supported by networking tools invade all traditional businesses and organizations what requires thinking in terms of whole systems, i. e. seeing each business as part of a wider economic ecosystem and environment. It is also becoming evident that the agile formation of very dynamic virtual organizations depends on the existence of a proper longer-term embedding or nesting environment (e. g. regional industry cluster), in order to guarantee certain basic requirements such as trust building (Trusting your partner is a gradual and long process); common interoperability, ontology, and distributed collaboration infrastructures; agreed business practices (requiring substantial engineering engineering efforts); a sense of

community (we vs. the others), and some sense of stability (when is a dynamic state or a stationary state useful). The more frequent situation is the case in which this nesting environment is formed by organizations located in a common region, although geography is not a major facet when cooperation is supported by computer networks.
