Mullan, 2014-01-30 Private online digital currency systems offer people accessible, convenient, and inexpensive everyday financial tools outside of traditional bank-owned and operated platforms. Digital currency systems facilitate local and international fund transfers, online and offline payments, and simple cash-to-digital everyday financial products without the need for a conventional bank account of any retail bank product. Over the past several years, Bitcoin has grown into an efficient person-to-person and person-to-business payment system without the backing of any bank or financial institution. This phenomenon is producing a new level of on- and offline commerce and a society much more attuned to digital currency systems. *The Digital Currency Challenge* details how new 2007-2008 U.S. legal issues surrounding digital currency products forced companies from the U.S. market and caused the Treasury Department to enact stricter regulations. Mullan profiles new and innovative present day digital currency systems, such as Bitcoin, and illustrates how software designers and monetary theorists use new technology to circumvent current U.S. regulations. This work also explains how new digital currency systems are not just software products, but tools providing financial freedom to people in countries all around the world.

m t banking for business online: Islamic Banking in Pakistan Feisal Khan, 2015-12-22 Islamic Banking and Finance (IBF) has become a growing force over the past three decades, with Pakistan being one of the IBF pioneers by converting to an 'interest-free' banking system in 1985. However, since independence in 1947, there has been continual tension over Pakistan's essential character, between Islamic Minimalists, who favour a Modernist interpretation of Islam, and those who favour an Islamic Maximalist interpretation that sees Pakistan as a model Islamic state. This book analyses the push to Islamize Pakistan and its financial system by Islamic revivalists, following the early 1947 debates in the original Constituent Assembly to the final 2002 ruling on IBF of the Shariat Appellate Bench of the Pakistan Supreme Court. It examines the practice and theory behind contemporary Islamic, Shariah-compliant, banking. It offers extensive interviews with Pakistani Islamic bankers on the state of their industry and how they see it developing, and provides analysis on how the Islamic banks' customers differ from those of conventional ones. Presenting a critical analysis of Pakistan's IBF experience and offering a new insight into Pakistan's banking industry that illustrates broader political and social trends in the country, this book will be of interest to specialists on Islam, South Asia and International Economics.
