lax to tokyo business class: **Wayne Thom** Emily Bills, 2020-12-15 The first monograph of photographer Wayne Thom, whose documentation of Late Modern architecture constitutes an architectural/visual archive unlike any other. A key primer to late-twentieth century Modernism, this monograph devoted to Wayne Thom chronicles his photographic practice and the architectural and urban environment in which he worked. An innovative chronicler of the booming West Coast urbanism of the 1960s and 70s, Thom's photographs of key projects by path-breaking architecture firms such as William Pereira & Associates, Edward Durell Stone, SOM, Gio Ponti, John Portman, I. M. Pei, and A. Quincy Jones helped establish the idea of cool architectural glamour of the era. Raised in Hong Kong, Thom moved to California in the mid-1960s and trained in the technical craftsmanship of photography, adept at harnessing natural light for both interior and exterior compositions. He soon began working with the figures who would become his clients and benefactors, most importantly William Pereira and A. Quincy Jones, a prolific architect and Dean of the School of Architecture at USC. As Emily Bills critically assess Thom's career, she demonstrates that his photography became inseparable from Late Modernism in the popular imagination, a period of architectural production that ran from the late 1960s through the 1980s. Wayne Thom: Photographing the Late Modern is a celebration of this key architectural photographer and a unique chronicle of the works of this transformative period of architectural expression.

lax to tokyo business class: Driving Airline Business Strategies through Emerging Technology Nawal K. Taneja, 2017-03-02 In the rapidly evolving airline industry, new technologies play an increasingly critical role in the delivery of real and perceived value in reducing costs, enhancing revenue, and improving customer service and customer safety/security. This book focuses at a senior executive level, examining the key forces affecting the airline business and their potential in terms of short and long-term strategies. The author discusses the role of emerging technology on the airline industry, defined very broadly and including computers, information, databases, aircraft, telecommunications, Internet, wireless, speech recognition, face recognition, etc. His argument is that technology should not only be an enabler of business strategy but crucially the driver of business strategy. The central theme is the vital interaction between technology and business strategy across a wide spectrum of functions - executives sharing their insights of what is needed in terms of revolutions in consumers, technologies, and productivities. What has held airlines back are not so much legacy systems but legacy mindsets, organizational structures and processes, as well as the intelligent selection, investments, and implementation of value-adding technologies. The book is the outcome of the author's own experience while working with a number of airlines and his participation in many discussions with practitioners in the airline and technology firms.
