network support business: Managerial Relationships and SMEs Internationalization

Elena-Mădălina Vătămănescu, Andreea Mitan, 2023-09-22 As the backbone of the economy, small- and medium-sized enterprises (SMEs) are key players in the dynamics of local, regional, and global markets, and are often obliged to provide timely responses to the increasingly fierce cross-border competition. However, SMEs internationalisation has temporarily been subject to a wait-and-see policy under the numerous uncertainties and global systemic disruptions. Despite the new normal brought about by the COVID-19 pandemic, recent studies show that the future still holds the potential to avail business performance opportunities to SMEs, and the hopes of managers for the years to come are reasonably high. Adopting a relationship-centric perspective, the book proposes a deeper analysis of the role of managerial relationship building and development and SMEs internationalization. In the networked economy, relationships are the invisible threads of the highly interconnected world. Either we call them connections, ties, bonds, or links, they are present everywhere marking the very essence of our lives, therefore claiming for wide consideration. Giving way to a stepwise screening of relationships and SMEs internationalization, the book is simultaneously addressed to scholars from different fields of study (i.e., international management, international business, international relationship marketing, etc.) and worldwide decision-makers (i.e., entrepreneurs and managers) interested in conducting smart business abroad.

network support business: Local Food Systems in Old Industrial Regions Jay D. Gatrell, Paula S. Ross, 2016-05-06 In recent years there has been an explosion of interest in local food systems-among policy makers, planners, and public health professionals, as well as environmentalists, community developers, academics, farmers, and ordinary citizens. While most local food systems share common characteristics, the chapters in this book explore the unique challenges and opportunities of local food systems located within mature and/or declining industrial regions. Local food systems have the potential to provide residents with a supply of safe and nutritious food; such systems also have the potential to create much-needed employment opportunities. However, challenges are numerous and include developing local markets of a sufficient scale, adequately matching supply and demand, and meeting the environmental challenges of finding safe growing locations. Interrogating the scale, scope, and economic context of local food systems in aging industrialized cities, this book provides a foundation for the development of new sub-fields in economic, urban, and agricultural geographies that focus on local food systems. The book represents a first attempt to provide a systematic picture of the opportunities and challenges facing the development of local food systems in old industrial regions.
