pri business membership: Investment Management, Stewardship and Sustainability Iris H-Y Chiu, Hans-Christoph Hirt, 2023-02-09 This book brings together thought leadership from academia and leading figures in asset management in key global jurisdictions, to pool together insights regarding the transformative visions and challenges for modern investment management, as well as best practices that realise the policy objectives in regulation and soft law. The world of investment management is being challenged by new legal, regulatory and soft law developments to demonstrate that their practices cohere with the long-term needs of the saving population as well as public interest needs in financing global sustainability and social development. The chapters in this book uniquely bring together the views of academia and practice on the key developments that can transform the law and practice of investment management, including the EU's new sustainable finance reform package, the UK Stewardship Code 2020, and developments in the US regarding the fit between fiduciary law for investment management and modern sustainability concerns. The book brings together the best of both worlds—critical thoughtful perspectives from academia and qualitative insight from the investment management industry. It will be of interest to researchers in law, investment management, business and management, practitioners in the investment management industry and their legal advisers, and policy-makers in the EU, UK and beyond who are grappling with the appropriate governance paradigms for bringing about more sustainable outcomes globally.

pri business membership: Evading the Patronage Trap Brian Palmer-Rubin, 2022-08-08 Why have Latin American democracies proven unable to confront the structural inequalities that cripple their economies and stymie social mobility? Brian Palmer-Rubin contends that we may lay the blame on these countries' systems of interest representation, which exhibit "biased pluralism," a system in which the demands of organizations representing economic elites—especially large corporations—predominate. A more inclusive model of representation would not only require a more encompassing and empowered set of institutions to represent workers, but would also feature spaces for non-elite producers—such as farmers and small-business owners to have a say in sectoral economic policies. With analysis drawing on over 100 interviews, an original survey, and official government data, this book focuses on such organizations and develops an account of biased pluralism in developing countries typified by the centrality of patronage—discretionarily allocated state benefits. Rather than serving as conduits for demand-making about development models, political parties and interest organizations often broker state subsidies or social programs, augmenting the short-term income of beneficiaries, but doing little to improve their long-term economic prospects. When organizations become diverted into patronage politics, the economic demands of the masses go unheard in the policies that most affect their lives, and along the way, their economic interests go unrepresented.

This book investigates the intricacies of resource management performance across various sectors within the Kurdistan Region of Iraq. With 13 in-depth studies, it examines the region's evolution from an agricultural society to an emerging market since the collapse of the Saddam Hussein regime in 2003. Oil and gas revenue, comprising over 85 percent of fiscal revenues, has attracted multinational companies and international humanitarian organizations, although external factors such as the ISIS conflict and global economic downturns have hindered their performance. Additionally, conflicts with Baghdad and the fallout of the ISIS war have led to double embargoes and economic crises, exacerbated by the region's provision for 2 million refugees and internally displaced persons. International entities like the IOM and UNDP have played vital roles in supporting the region's development amid these challenges. Despite these obstacles, the Kurdistan Region demonstrates significant economic potential. By scrutinizing resource management in sectors such as education and electricity, this book offers valuable insights and policy recommendations for researchers, decision-makers, and organizations invested in the region's growth and stability.

The authors show that the changes which have occurred are uneven, limited and reversible. Despite the aura of reform it is the degree of continuity which is the most noticeable feature. In many respects the Mexican State remains highly authoritarian.
