Understanding this model is crucial for businesses aiming to thrive in today's digital economy.

At its core, the platform-to-business model revolves around creating ecosystems that benefit both platform providers and business users. platform to business: *Global Meets Digital* Vinod Jain, 2023-06-02 The world today is at the intersection of two megatrends – Globalization and Digitalization – a business revolution unfolding in real time. *Global Meets Digital* captures the many nuances of this revolution succinctly, including its impact on our lives and business. An immediate implication of this revolution is that the economic principles that underpinned business and strategy for hundreds of years, such as diminishing returns to scale and resource scarcity, are no longer valid for a large and growing number of products and services. The book will challenge you to think differently not just about digital products, but also about physical products. In the global-digital world, products are of three

kinds—physical, digital, and smart machines (products that are both physical and digital, and connected to the internet)—a distinction missed by most books on strategy and global business. The economics of each kind of products is distinct from that of the others, which has strategic implications for all kinds of businesses—implications such as how to compete and how to create and capture value. With several mini case studies and over 100 company examples, the book covers themes and cutting-edge issues like the paradox of globalization, digital disruption, disruptive business models, exponential technologies, Internet of Things, competition in digital markets, winner-take-all market dynamics, Industry 4.0, how to innovate, strategizing for the New Normal, and value creation and value capture in both B2C and B2B contexts. The book derives its underpinnings from the practice of global and digital business, while theory remains in the background. Intended specifically for an executive/professional audience, *Global Meets Digital* should also be of value to business students and professors learning to dip their toes into a digital world. Vinod Jain is an expert in global and digital strategy, award-winning professor, Fulbright Scholar, and author of an MBA textbook, *Global Strategy*. He taught at the Rutgers Business School, Newark and New Brunswick, and the Robert H. Smith School of Business, University of Maryland, College Park. At Maryland, he was also the Founding Director of the federally funded Center for International Business Education and Research and Academic Director of Smith School's Executive MBA program in China. Since leaving Maryland, he has taught in China, Denmark, Finland, Poland, and India as a visiting or term professor. His opinion pieces have appeared in *The Washington Post*, *The Baltimore Sun*, *Mensa Bulletin*, and *Economic Times* and *Mint* (India's #1 and #2 business dailies), among other media. In the past, he worked as a middle- and senior-level executive with American and British multinationals. Vinod has a PhD in Strategy and International Business from the University of Maryland, College Park, MS in Management from UCLA, and MS and BS (Hons) in Statistics from the Indian Statistical Institute, Calcutta.

platform to business: XaaS: Everything-as-a-service - The Lean And Agile Approach To Business Growth Shantanu Bhattacharya, Lipika Bhattacharya, 2021-10-13 XaaS: Everything-as-a-Service: The Lean and Agile Approach to Business Growth takes the reader into the bold new world of pay-per-use for a product or service. From the perspective of the customer, the servitization model yields multiple benefits: the consumer can try out the product/service at a

relatively low cost, the risk is mitigated, capital expenses can be converted into operating expenses, it is not needed to forecast how often the product/service is used, and only parts of the product/service needed can be used. Similarly, a provider can benefit by having a larger market coverage, steadier stream of revenues, upgrades as and when needed, sharing of fixed assets across consumers, practicing of value-based pricing, and unbundling or bundling utility for consumers using appropriate pricing techniques. However, this 'nanoization' of products/services is tricky, and has to be designed carefully. This book provides a set of recipes to providers to adopt the XaaS model by changing the provider's mindset: dividing the product/service forces the provider to take a value-driven approach to his product/service, and consequently, eliminate all non-value added activities. The requirements of the XaaS model serve both as an objective to the innovation and internal processes of the provider, and as guide to understanding the customer's needs. The book also covers data acquisition, data analysis and synthesis, and data application needs of the XaaS model, with simple examples and case studies from the business world of firms that achieve these objectives successfully.

Analysing the DMA in the broader legal and market context, the chapters examine tensions between the DMA and other (EU and national) rules governing the conduct of online platforms, compare the DMA to similar initiatives undertaken in other jurisdictions, and bring perspectives from other disciplines, such as data protection regulation. A companion website reports on important developments in relation to the DMA, such as the decisions designating tech giants as gatekeepers and subsequent litigation arising therefrom, and provides links to analysis discussing the developments. An authoritative treatment of the DMA is paired with an easy-to-follow writing style to make this comprehensive compendium essential reading for practitioners, judges, regulators, and researchers working on matters relating to the digital economy.

platform to business: Enterprise Architecture Function Ingo Arnold, 2022-01-03 This book provides a method to plan, develop, validate, or evolve the design of an enterprise architecture function so that it fully meets the organization's needs. The reader will benefit from this book in two ways. First, it provides a structured overview and orientation to the subject of architecture from an architecture function perspective. Second, it guides through the process of planning, building, and operating your own architecture organization based on a generic architecture function blueprint presented in the form of a pattern language offering a structured means for navigating, contextualizing, combining, and composing the architecture function patterns. The book is structured in six chapters. Chapter 1 "Introduction" explains the starting position and objectives of the book and introduces key concepts that will be explained further in subsequent chapters. Chapter 2 "Architecture Function Pattern Language" introduces the concepts of pattern, pattern catalogue, pattern topology, and ontology and explains how these concepts are combined to form a pattern language for planning, designing, and operating an architecture function. Next, Chapter 3 "Architecture Function - Context" introduces concepts that are crucial for understanding the challenges that an architecture function faces and presents a generic schema for the business organizations and value chain. Chapter 4 "Architecture Function - Challenge" looks at an architecture function from a black box perspective and outlines the expectations and requirements that companies place on architecture organizations. It discusses the building blocks of an architecture function, the services it provides along the enterprise value chain, and the quality attributes that enterprises expect from their functions. Chapter 5 "Architecture Function - Constitution" then shifts from a black-box perspective to a white-box perspective and outlines the generic design of an architecture function in order to realize functional and quality-related requirements. Chapter 6 "Pattern Catalogue" eventually introduces the pattern catalogue with a total of 48 architecture function patterns. These patterns suggest designs for collaboration between the architecture function and enterprise organizations, for the elaboration and development of enterprise services along the enterprise value chain, or for aligning architecture governance with enterprise governance. The book is intended for a broad readership, including enterprise, domain, and solution architects, lecturers and students, and anyone else interested in understanding the value proposition, responsibilities, outcomes, methods, and practices of architecture functions. It introduces the basic concepts and theories needed to understand the pattern language presented and the patterns it summarizes.

platform to business: Online platforms - new actors of the food chain Amina Lattanzi, 2023-11-07 Food e-commerce is a fast-developing market. Regrettably, the number of products exchanged on the web that may be harmful to consumers is also steadily rising. This development poses challenges for controlling authorities and legislators in their mission to protect EU consumers' health and economic interests, leading to a lively discussion on the status and role of e-platforms in the age of food online. Responsibilities and liabilities in the (online) food chain are not yet clearly defined, and seem to be stuck between stringent safety regulation and immunity to promote innovation. Standing at the intersection of law, food and digital technology, 'Online platforms - new actors of the food chain' looks at the development of food online, and documents how (and whether) EU regulators and courts have been addressing the many challenges this development raises, especially in terms of food information and who is responsible for it.
