qatar business class vs emirates: The Geographies of Air Transport Andrew R. Goetz, Lucy Budd, 2016-03-09 Making a detailed contribution to geographies of air transport and aeromobility, this book examines the practices and processes that produce particular patterns of air transport provision both regionally and globally. In so doing, it updates the seminal contributions of Eva Taylor (1945), Kenneth Sealy (1957), Brian Graham (1995) and others to the study of air transport geography. Leading scholars in the field offer a unique insight into the key developments that have occurred in the field and the implications that these developments have had for geography, geographers, and global patterns of past, present and future air transport. Although globalization and liberalization processes have greatly expanded the demand for air transport over the last two decades, the industry has experienced several major setbacks due to economic, security, and environmental concerns. Many of these impacts have been much more pronounced in some regions, such as North America and Europe while others, such as Asia-Pacific have not been as adversely affected. Accordingly, there is a clear need to examine these recent economic and geopolitical changes from a geographical perspective given the differentiated pattern of effects from global processes. Addressing this need, this volume opens with thematic chapters covering key topics such as the historical geographies, socio-cultural mobilities, environmental externalities, urban geographies, and sustainability of the global air transport industry, followed by regional analysis of the industry in Asia-Pacific, Latin America, Greater Middle East and Africa as well as North America and Europe.

qatar business class vs emirates: *Empire of the Air* Jenifer Van Vleck, 2013-11-01 Jenifer Van Vleck's fascinating history reveals the central role commercial aviation played in the United States' ascent to global preeminence in the twentieth century. As U.S. military and economic influence grew, the federal government partnered with the aviation industry to deliver American power across the globe and to sell the idea of the American Century to the public at home and abroad. The airplane promised to extend the frontiers of the United States to infinity, as Pan American World Airways president Juan Trippe said. As it accelerated the global circulation of U.S. capital, consumer goods, technologies, weapons, popular culture, and expertise, few places remained distant from Wall Street and Washington. Aviation promised to secure a new type of empire--an empire of the air instead of the land, which emphasized access to markets rather than the conquest of territory and made the entire world America's sphere of influence. By the late 1960s, however, foreign airlines and governments were challenging America's control of global airways, and the domestic aviation industry hit turbulent times. Just as the history of commercial aviation helps to explain the

ascendancy of American power, its subsequent challenges reflect the limits and contradictions of the American Century.

China's transition to an urban-industrial society relies on its abundant domestic coal supplies, and on an increase in oil and gas imports. However, authorities are confronted with trade-offs between investments in expanding supplies of fossils, environmental sustainability, energy efficiency and in clean energy. Resources spent on expanding imported energy have to be weighted against clean energy investments and improving efficiency of the fossil-fuel sector. The same is no less true for the European Union and its member states. Import dependency on piped gas is again growing. Security of supply of natural gas depends on political cooperation with energy-rich countries. At the same time the EU has to meet its clean energy commitments by compromises between member states and 'Brussels'. Chinese National Oil Companies bridge the worlds of government in China and the extractive sector in hydrocarbon exporting-countries. At the global level, Chinese (Trans-)National Oil Companies maintain competitive and cooperative relations with privately owned International Oil companies. This book focuses, among others, on these networks with the objective to contribute to the study of the geopolitical economy of the energy sectors in the global system. Contributors are: M.P.
