united business polaris: International Studies Scott Straus, Barry Driscoll, 2018-09-10 The challenge of teaching international studies is to help students think coherently about the multiple causes and effects of global problems. In *International Studies: Global Forces, Interactions, and Tensions*, award-winning scholars Scott Straus and Barry Driscoll give students a clear framework that pinpoints how key factors—forces, interactions, and tensions—contribute to world events, with both global and local consequences. The authors first show students how to look for common patterns in global issues by introducing four world-shaping forces: global markets, shifting centers of power, information and communications technologies, and global governance. They systematically trace how these forces prompt interactions among world actors and thus give rise to a set of

tensions that spur key challenges. The framework enables students to ask and answer for themselves—Who is interacting? Where did such interactions develop? What policies or institutions govern them? Why are they getting certain global and local reactions? Students then apply the framework to the global problems that matter most to them: human rights abuses, economic inequality, terrorism, forced migration, pandemics and global health responses, climate change, food security, and more. International Studies raises the bar for the Introduction to IS course, moving beyond interdisciplinary, and into the realm of critical analysis to increase student relevancy and motivation. united business polaris: *Sex Trafficking in the United States* Andrea J. Nichols, 2024-11-26

This book is a comprehensive and accessible overview of sex trafficking in the United States, examining its underlying dynamics and sharing key research findings. Andrea J. Nichols examines the backgrounds and experiences of survivors, traffickers, and buyers, showing how social and structural dynamics affect trafficking in the United States. She details common risk factors for victimization, emphasizing weak social institutions and safety nets. This book's intersectional approach foregrounds the ways social oppression and marginalization contribute to heightened vulnerability, accounting for the roles of race, ethnicity, citizenship status, sexuality, gender, age, and disability. Nichols introduces readers to the theoretical and political perspectives that shape research and policy on sex trafficking, considering abolitionist, neoliberal, feminist, criminological, and sociological viewpoints. She assesses the outcomes of policies relating to commercial sex and analyzes a variety of responses to sex trafficking, including in social services, health care, and the criminal legal system, as well as activism. Nichols reflects on how service providers, activists, and everyday people can effectively advocate for and with survivors of sex trafficking and offers recommendations for practice and policy. *Sex Trafficking in the United States* is essential for understanding the dynamics of sex trafficking and its underlying sources. This second edition is thoroughly revised and updated, integrating the most up-to-date research.

united business polaris: *History of Acquisition in the Department of Defense, Volume 1* Elliott V. Converse, 2012-06-12 This volume is a history of the acquisition of major weapon systems by the United States armed forces from 1945 to 1960, the decade and a half that spanned the Truman and Eisenhower administrations following World War II. These instruments of warfare—aircraft, armored vehicles, artillery, guided missiles, naval vessels, and supporting electronic systems—when combined with nuclear warheads, gave the postwar American military unprecedented deterrent and striking power.¹ They were also enormously expensive. The volume is organized chronologically, with individual chapters addressing the roles of OSD, the Army, Navy,

and Air Force in two distinct periods. The first, roughly coinciding with President Truman's tenure, covers the years from the end of World War II through the end of the Korean War in 1953. The second spans the two terms of the Eisenhower presidency from 1953 through early 1961. The year 1953 marked a natural breakpoint between the two periods. The Korean War had ended. President Eisenhower and his defense team began implementing the "New Look," a policy and strategy based on nuclear weapons, which they believed would provide security and make it possible to reduce military spending. The New Look's stress on nuclear weapons, along with the deployment of the first operational guided missiles and the rapid advances subsequently made in nuclear and missile technology, profoundly influenced acquisition in the services throughout the 1950s and the remainder of the century. As used in this study, the term "acquisition" encompasses the activities by which the United States obtains weapons and other equipment. In surveying the history of acquisition between 1945 and 1960, this study discusses or refers in passing to many of the hundreds of weapon system programs initiated by the services in that period, but it is not a weapons encyclopedia. Instead, it investigates a few major programs in depth in the belief that such detailed examination best reveals the evolution of acquisition policies, organizations, and processes, and the various forces influencing weapons programs.
