university of business and economics vienna: Control Systems and Mathematical

Methods in Economics Gustav Feichtinger, Raimund M. Kovacevic, Gernot Tragler, 2018-06-08 Since the days of Lev Pontryagin and his associates, the discipline of Optimal Control has enjoyed a tremendous upswing - not only in terms of its mathematical foundations, but also with regard to numerous fields of application, which have given rise to highly active research areas. Few scholars, however, have been able to make contributions to both the mathematical developments and the (socio-)economic applications; Vladimir Veliov is one of them. In the course of his scientific career, he has contributed highly influential research on mathematical aspects of Optimal Control Theory, as well as applications in Economics and Operations Research. One of the hallmarks of his research is its impressive breadth. This volume, published on the occasion of his 65th birthday, accurately reflects that diversity. The mathematical aspects covered include stability theory for difference inclusions, metric regularity, generalized duality theory, the Bolza problem from a functional analytic perspective, and fractional calculus. In turn, the book explores various applications of control theory, such as population dynamics, population economics, epidemiology, optimal growth theory, resource and energy economics, environmental management, and climate change. Further topics include optimal liquidity, dynamics of the firm, and wealth inequality.

university of business and economics vienna: Transfer Pricing and Value Creation

Raffaele Petruzzi, Romero J.S. Tavares Esq., 2019-09-02 Value Creation and its effects on Transfer Pricing and tax law Emerging from the OECD/G20 BEPS Project, a new, somewhat fuzzy notion of Value Creation came to permeate not only Transfer Pricing language but also wider allocation rules and anti-abuse provisions in international tax law. The notion of 'Value Creation' reframes the interpretation and application of the Arm's Length Principle (ALP) that is embedded in Articles 7 and 9 of the OECD Model Convention. This new Value Creation notion and approach assist in understanding key enterprise functions while different industry sectors manifest these concepts in various ways. Situating such notions and this approach within the law of tax treaties and analyzing terms of the OECD Transfer Pricing Guidelines alongside their factual context is the aim of this book. Here, law students address Transfer Pricing and Value Creation in sectors as varied as commodities trade, automotive, consumer products, food and beverages, pharmaceutical and life sciences, telecommunications, and the key topic of value creation in a digitalized economy. Our LL.M. students were required to address issues not explored in legal research and to discuss factual topics relevant for Transfer Pricing. All students focused on topics that are new to the international tax debate that keep evolving and on factual matters that often escape legal research.

university of business and economics vienna: The Role of Collective Bargaining in the Global Economy Susan Hayter, 2011-01-01 The book examines the ways in which collective bargaining addresses a variety of workplace concerns in the context of today's global economy. Globalization can contribute to growth and development, but as the recent financial crisis demonstrated, it also puts employment, earnings and labour standards at risk. This book examines the role that collective bargaining plays in ensuring that workers are able to obtain a fair share of the benefits arising from participation in the global economy and in providing a measure of security against the risk to employment and wages. It focuses on a commonly neglected side of the story and demonstrates the positive contribution that collective bargaining can make to both economic and social goals. The various contributions examine how this fundamental principle and right at work is realized in different countries and how its practice can be reinforced across borders. They highlight the numerous challenges in this regard and the critically important role that governments play in rebalancing bargaining power in a global economy. The chapters are written in an accessible style and deal with practical subjects, including employment security, workplace change and productivity and working time.

university of business and economics vienna: *The Development of the Mutuality Principle in the Insurance Business* Johann Brazda, 2020 Im Mittelpunkt steht die Entwicklung und Gewichtung des Gegenseitigkeitsprinzips bei Versicherungsvereinen auf Gegenseitigkeit (VVG) in Österreich. Beginnend mit den ersten Gründungen von VVG führen die Forschungen bis in die Gegenwart und stellen die jeweiligen Entwicklungsphasen der Gegenseitigkeit dar. Die dabei erkennbare schrittweise Verdünnung des Gegenseitigkeitsprinzips in den VVG bzw. die phasenweise Modifizierung des Gegenseitigkeitsgedankens werden sowohl für Österreich als auch mittels internationaler Beispiele in Form von Länderstudien präsentiert.

university of business and economics vienna: *Standing On The Shoulders Of International Business Giants: In Memory Of Yair Aharoni* Arie Y Lewin, Ravi Ramamurti, Elizabeth L Rose, 2024-03-04 This book serves as an introductory volume to Yair Aharoni's remarkable impact on international business (IB) research. Most IB researchers will be familiar with at least one aspect of his work, but relatively few will be familiar with his broader body of work, as it spans so many of the issues addressed today in IB and strategy. This book aims to introduce readers to the depth and breadth of his impact. Unquestionably a founder of the IB field, over the course of his long career, Aharoni influenced its earliest development and, driven by a deep connection to policy and managerial practice, continually challenged conventional thinking on IB and strategy. He generated seminal insights into many aspects of why and how firms internationalize, including managerial

decision-making processes, the strategies employed by state-owned enterprises, the interaction between firms and governments, and the foreign expansion of firms — including small- and medium-sized enterprises (SMEs) and those operating in the service sector — based in small and open economies. His research contributed to several salient research directions, including the behavioral theory of the firm, emerging-market multinationals, international entrepreneurship, the service economy, and non-market strategies. Aharoni was also an influential educator, having served as the founding dean of two top business schools in Israel. He was deeply engaged with the Israeli business environment — particularly senior executives of start-up companies — and a highly-valued advisor to the Israeli government. In honor of these contributions, Aharoni was the first management scholar in Israel, to be awarded the prestigious Israel Prize in 2010. Few scholars have had such meaningful impact on research, practice, and policy.

university of business and economics vienna: *International Tax Coordination* Martin Zagler, 2010-06-30 International taxation is a major research topic, and for a field of research at the intersection of so many disciplines there has been surprisingly little done across disciplinary boundaries. This book fills the gap by combining teams from business, economics, information science, law and political science to offer a unique and innovative approach to the issue of international tax coordination. All the chapters are written in collaboration between at least two authors from two different disciplines. This approach offers a rich and nuanced understanding of the many issues of international tax coordination. The book collects seven papers, each one a valuable contribution in itself, beginning with current problems of international taxation and finishing with potential solutions. The essays explore current EU legislation, tax avoidance and tax fraud, as well as double tax agreements, dividend repatriation and hybrid finance and tax planning. Providing methodological answers to the question of how to conduct interdisciplinary research, the book also gives an accessible introduction into research questions and answers that are important in related disciplines for scholars in various areas. This book will be of interest to postgraduates and researchers in the fields of economics, business, informational science, law and political science, as well as to professional accountants and tax lawyers.

university of business and economics vienna: *Europe-China Tax Treaties* Jianwen Liu, Gongliang Tang, 2010-05-28 The book is the result of a joint research project on the tax treaties concluded between the People's Republic of China and European countries. Each chapter carefully analyses the extent to which Chinese tax treaties follow the OECD Model Tax Convention on Income and Capital and the UN Income and Capital Model Convention. The focus is on the different policy decisions underlying the various provisions. Additionally, the contributions analyse the extent to which Chinese tax treaty policy differs with respect to EU and non-EU Member States. They also highlight relevant policy changes over time. The fact that each contribution is the product of the collaboration between European and Chinese researchers and includes the results of the International Conference on Europe - China Tax Treaties Research, held in March 2009 in Beijing, serves to enrich its analysis. Among the topics covered are the following: • Treaty Entitlement (Articles 1, 4 and 24 OECD Model) • Business Profits (Articles 5, 6, 7, 8, 9, and 14 OECD Model) • Passive Income (Articles 10, 11, and 12 OECD Model) • Capital Gains (Article 13 OECD Model) • Employment Income (Articles 15, 16, 18, 19, and 20 OECD Model) • Artistes and Sportsmen (Article 17 OECD Model) • Methods to Avoid Double Taxation (Article 23 OECD Model) • Non-Discrimination (Article 24 OECD Model) • Mutual Agreement, Exchange of Information and Mutual Assistance in the Collection of Taxes (Articles 25, 26 and 27 OECD Model)

university of business and economics vienna: *Attribution of Profits to Permanent Establishments* Michael Lang, Raffaella Petrucci, Alfred Storck, 2020-04-08 Attribution of Profits to Permanent Establishments: Issues and Developments The profit attribution to permanent establishments is one of the most controversial topics in international tax law. In recent years it was subject to various changes based on the introduction of the "Authorized OECD Approach" in 2008 and 2010, the outcomes of Final Report on OECD BEPS Action 7 and the Final Report on "Additional Guidance on the Attribution of Profits to a Permanent Establishment under BEPS Action 7" from

2018 (with the previous Discussion-Drafts). This publication discusses the most important issues and recent developments related to the attribution of profits to permanent establishments. Starting with an in-depth analysis on the commonalities and differences between the profit attribution provisions in modern double tax treaties (ie Art 7 AOA vs Art 9 OECD/UN Models), it further deals with topics such as profit attribution to PEs and PE exemptions (Art 5 para 4), profit attribution to agency PEs (Art 5 para 5 and 6), and profit attribution to a significant economic presence and to market states. This book is based on the outcomes of the presentations and discussions held during the WU Transfer Pricing Symposium that took place in October 2019 at the WU Vienna University of Economics and Business. The authors, apart from providing a theoretical background to the discussed issues, also present case studies that show how certain issues can be approached in practice. Every chapter ends with a summary of the opinions on the issues at stake of representatives of tax administrations, multinationals and tax advisories, which completes this essential practical guideline.

university of business and economics vienna: Networks in International Business

George WJ Hendrikse, Gérard Cliquet, Ilir Hajdini, Aved Raha, Josef Windsperger, 2023-01-01 This contributed volume focuses on the management and governance of international business networks (IBN). Specifically, the chapters refer to theoretical, conceptual, empirical, and case study papers from all areas in economics and management of IBN. These include cooperatives, franchising, retail chains, strategic alliances, public-private partnerships and new network forms in the digital economy. This book is ideal for researchers and strategists who are keen to improve their understanding of the latest developments in the field.

university of business and economics vienna: Introduction to European Tax Law: Direct

Taxation Karoline Spies, 2023-01-02 This handbook is a concise guide for all those who aim at obtaining a basic knowledge of European tax law. Designed for students, it should also be useful for experienced international tax specialists with little knowledge of European law, European law specialists who are reluctant to approach the technicalities of direct taxation and non-Europeans who deal with Europe for business or academic reasons and need to understand the foundations of European tax law. This book should also help academics without a legal background to approach the technical issues raised by European Union tax law. This edition contains selected relevant information available as of 30 June 2022. It retains all of the features and tools contained in the previous editions (including the final charts, which our readers very much appreciate). In this edition we have also included a list of relevant documents and a selection of reference textbooks on European tax law in five languages, which we found of potential interest to our readers.

university of business and economics vienna: The OECD Multilateral Instrument for Tax

Treaties Michael Lang, Pasquale Pistone, Alexander Rust, Josef Schuch, Claus Staringer, 2016-04-24 The Multilateral Instrument (MLI) proposed in OECD BEPS Action 15 will lead to the modification of numerous tax treaties. As tax treaties can have different wording, terminology and structure, a great challenge is to find a proper way to accomplish their modification without distorting the underlying framework or triggering undesirable effects. This book analyses the MLI, which was signed by over seventy jurisdictions on 7 June 2017. The topics covered include: • the procedural mechanisms on how the new measures to prevent base erosion and profit shifting (BEPS) will interact with and complement existing tax treaties; • the scope of the MLI in order to ascertain which tax treaties and taxes are covered; • the interpretation of terms used in the MLI and the relationship between the languages used in the MLI and in the particular tax treaties; • the implementation of the minimum standard through the MLI, as well as how states can exercise various options offered by the MLI and reserve the right not to apply certain provisions of the MLI; •

the legal consequences of the exercise of options and reservations for the other states; • the notification procedure through which states declare their choices; and • the possibilities and procedure for withdrawal from the obligations entered into upon signing the MLI. Finally, the book discusses whether the mechanism of the MLI can serve as a role model for future changes to the OECD Model Convention. The book incorporates the analyses of leading scholars and practitioners dealing with international tax matters. Critical insights are offered for academics, practitioners, tax officials and judges who deal with or are interested in the field of international taxation.

university of business and economics vienna: Agent-Based Modeling Meets Gaming Simulation K. Arai, H. Deguchi, H. Matsui, 2006-10-10 This collection of excellent papers cultivates a new perspective on agent-based social system sciences, gaming simulation, and their hybridization. Most of the papers included here were presented in the special session titled Agent-Based Modeling Meets Gaming Simulation at ISAGA2003, the 34th annual conference of the International Simulation and Gaming Association (ISAGA) at Kazusa Akademia Park in Kisarazu, Chiba, Japan, August 25-29, 2003. This post-proceedings was supported by the twenty-first century COE (Centers of Excellence) program Creation of Agent-Based Social Systems Sciences (ABSSS), established at the Tokyo Institute of Technology in 2004. The present volume comprises papers submitted to the special session of ISAGA2003 and provides a good example of the diverse scope and standard of research achieved in simulation and gaming today. The theme of the special session at ISAGA2003 was Agent-Based Modeling Meets Gaming Simulation. Nowadays, agent-based simulation is becoming very popular for modeling and solving complex social phenomena. It is also used to arrive at practical solutions to social problems. At the same time, however, the validity of simulation does not exist in the magnitude of the model. R. Axelrod stresses the simplicity of the agent-based simulation model through the "Keep it simple, stupid" (KISS) principle: As an ideal, simple modeling is essential.

university of business and economics vienna: *Quantitative Marketing and Marketing Management* Adamantios Diamantopoulos, Wolfgang Fritz, Lutz Hildebrandt, 2013-01-31 Quantitative marketing has been gaining importance during the last decade. This is indicated by the growing number of model- and method-oriented studies published in leading journals as well as by the many successful applications of quantitative approaches in pricing, advertising, new product planning, and market segmentation decisions. In addition, market research has clearly benefitted from applying advanced quantitative models and methods in practice. Some 60 researchers – among them worldwide leading scholars – offer a broad overview of quantitative approaches in marketing. They not only highlight diverse mathematical and methodological perspectives, but also demonstrate the relevance and practical consequences of applying quantitative approaches to marketing problems.

university of business and economics vienna: National Tax Policy in Europe Krister Andersson, Eva Eberhartinger, Lars Oxelheim, 2007-09-04 European taxes have long been debated for their potential role as barriers to increased investment and welfare. The discussion has often circulated around the size of the tax bases and the magnitude of the tax rate. In this book we argue that in the taxation context the European Union (EU) is at a cross-road facing strong forces pushing it into two polar positions. One of these is the scenario with all welfare provided by the national regime and financed by taxes collected entirely by national authorities. The other extreme is the situation where all welfare is – ferred at an EU level financed entirely by taxes collected at that level. The two forces pressing the tax situation into one of these two poles are spelt tax competition and welfare arbitrage. The research question addressed in this book covers the existence of a potential steady state in between these two poles. Our basic – pothesis is that there might be such a steady state due to the immobility of some tax bases and where the taxation of these bases have no externalities affecting – vestment. We argue that the very complex tax structures of Europe and the tax – certainty facing investors in Europe need to be addressed in a comprehensive way.

university of business and economics vienna: **40 Years of Economics** Muriel Dal Pont Legrand, Sandye Gloria, 2025-09-01 This book is written in honour of Richard Arena, Professor of

Economics at the University of the Côte d'Azur and a specialist in the history of economic thought. Written by distinguished scholars and historians of economic thought, this volume covers various scientific topics that Richard Arena has dealt with during his 40 years of academic activity. It features contributions on the theory and history of economic analysis, covering economic thinking from the 19th and 20th centuries through the post-war period to Cambridge economics and the Sraffa period. It also includes contributions on economic modelling, economic philosophy and ontology. This book will be of interest to anyone interested in the history of economics and, in particular, the work of Richard Arena.

university of business and economics vienna: *Introduction to European Tax Law on Direct Taxation* Michael Lang, Pasquale Pistone, Josef Schuch, Claus Staringer, Alexander Rust, Georg Kofler, Karoline Spies, 2024-12-19 This concise handbook has become a traditional instrument for gaining basic knowledge of European tax law with emphasis on direct taxes. It is directed at students, experienced international tax specialists with little knowledge of European law, European law specialists and non-Europeans who deal with Europe for business or academic reasons and need to understand the foundations of European tax law. Moreover, this book can be useful to academics without a legal background in approaching technical issues raised by European Union tax law, as well as give inspiration to the most experienced European direct tax law experts. The eighth edition adds new updates on the most essential changes and new case law of the CJEU in the field of European direct taxation. Furthermore, due to its particular importance, the EU Global Minimum Tax Directive is now covered in a separate chapter.
