what degree for business: *A Business History of Retail* Bettina Liverant, 2024-09-05 Although transformations in retailing are of tremendous current interest, there is no single broad-ranging account of the evolution of retailing formats. *A Business History of Retail* fills this gap, providing a chronological presentation of changes in retail businesses and shopping experiences from pre-industrial times to the present. Retailing is explored as both an economic and a cultural phenomenon, tracing retail strategies and business operations as they are reconfigured by retailers adapting to changing conditions, new technologies, government policies, and evolving markets. Relationships between the makers, sellers, and buyers of goods are shaped and reshaped as retailers, large and small, respond to competition and pursue new opportunities. Areas of continuity are identified even as businesses grow and strategies evolve. After four centuries there are more retailers selling more merchandise in more ways to more customers. The mass consumption of goods and services is central to American and Canadian history and understanding consumer society requires understanding retailing. Combining original research with recent scholarship in business and social history, cultural theory, and readings in current retail business strategy, this study provides a valuable resource for students and scholars in a wide range of fields and will appeal to general readers with an interest in retail, shopping, and consumerism.

what degree for business: *So You Want to Start a Nursery* Tony Avent, 2003-07-11 When Avent announced that he was quitting his job to build a specialty nursery, his former horticulture professor begged his student to reconsider, telling him he couldn't possibly make a profit without doing something illegal. More than ten years and 20 nursery catalogs later, Avent owns a thriving national business with nearly 30 employees. He wrote *So You Want to Start a Nursery* to debunk myths about the ornamental-plants nursery business and what it takes to succeed, whether you're a backyard hobbyist or a wholesale grower. (And he still has a clean arrest record.) Assuming that the reader has some basic knowledge about how plants are grown, Avent focuses on the business and planning concerns of the nursery owner. While recounting humorous stories of his baptism by fire as a beginning nurseryman, Avent also provides a primer on the nursery industry as a whole, with discussions of the merits and disadvantages of retail, wholesale, mail-order, and liner operations, to name just a few. Readers of this book will obtain the tools they need to make a business plan of their own. This book is a must-read for horticulture students, industry insiders, and advanced gardeners who dream of turning their passion for plants into a job they love.

what degree for business: *Intelligent Energy Field Manufacturing* Wenwu Zhang, 2018-10-03 Edited by prominent researchers and with contributions from experts in their individual areas, *Intelligent Energy Field Manufacturing: Interdisciplinary Process Innovations* explores a new philosophy of engineering. An in-depth introduction to Intelligent Energy Field Manufacturing (EFM), this book explores a fresh engineering methodology that not only integrates but goes beyond methodologies such as Design for Six Sigma, Lean Manufacturing, Concurrent Engineering, TRIZ, green and sustainable manufacturing, and more. This book gives a systematic introduction to classic

non-mechanical manufacturing processes as well as offering big pictures of some technical frontiers in modern engineering. The book suggests that any manufacturing process is actually a process of injecting human intelligence into the interaction between material and the various energy fields in order to transfer the material into desired configurations. It discusses technological innovation, dynamic M-PIE flows, the generalities of energy fields, logic functional materials and intelligence, the open scheme of intelligent EFM implementation, and the principles of intelligent EFM. The book takes a highly interdisciplinary approach that includes research frontiers such as micro/nano fabrication, high strain rate processes, laser shock forming, materials science and engineering, bioengineering, etc., in addition to a detailed treatment of the so called non-traditional manufacturing processes, which covers waterjet machining, laser material processing, ultrasonic material processing, EDM/ECM, etc. Filled with illustrative pictures, figures, and tables that make technical materials more absorbable, the book cuts across multiple engineering disciplines. The majority of books in this area report the facts of proven knowledge, while the behind-the-scenes thinking is usually neglected. This book examines the big picture of manufacturing in depth before diving into the details

what degree for business: *What Makes Students Tick?* Udoh Elijah Udom, 2014-09-29 The educational system is society's best ally and should not be allowed to break down. Our objective in this study was to identify the causes of high dropout rates and low passion for learning among

college students. The common view that students are lazy or lacking interest in education is unfounded. On the contrary, we found that, but for factors beyond their control, most students would work hard to achieve their educational objectives. To avoid the judgmental trap, students were asked to identify the factors that would unlock their passion for learning. The factors identified by the students are analyzed in this book. It is hoped that students, parents, teachers, and school authorities will find this book a light to their path. Udoh Elijah Udom Students lose interest in education and drop out of school for a number of reasons. Dr. Udom rightly turned to us, the students, to find out the factors that would restore our confidence in the education system and make us enroll and remain in school till graduation. I strongly recommend this book to my fellow students. Joseph J. Brown, Student Our school system has experienced dramatic developments in recent decades, including low motivation to learn among college students. Dr. Udoms book highlights the causes of students lack of passion for learning and offers recommendations for a sustainable recruitment and retention of students. This book is one of the best that has been written on this topic and is strongly recommended as a reference material. Dr. William H. Kraus, associate professor, Argosy University, Nashville campus
