what to do with business degree: Liberalising the Accounting Curriculum in University Education Alan Sangster, Richard M.S. Wilson, 2014-10-29 This book presents the views of accounting educators, accounting education policy-makers, and accounting practitioners from across the world on the challenging topic of liberalising the accounting curriculum within university education. Accounting is a relatively new subject within universities and has been absorbed into a high level of education without any real attempt to do so within the traditional ethos of a liberal arts education. In this book, the logic of teaching using the liberal arts is described and contrasted with the practical vocational training approach of teaching which has formed the foundation of accountancy courses for many years. A proposal to change this established practice, by integrating the liberal arts into the university accounting curriculum, is followed by a series of short chapters which address the relevance, validity and worthiness of the proposed approach. Comments and counter-arguments are then discussed before further chapters illustrate how the proposed change may be achieved in a variety of different contexts - ranging from that of the global financial crisis (which began in 2008) to the inclusion of ethics and sustainability within the accounting curriculum. This book will aid those teaching accounting in universities to improve the design of their accounting degree programmes by moving away from an excessive emphasis on technical skills towards a broader consideration of a liberal contextualisation of the accounting curriculum. This book was originally published as a special issue of Accounting Education: an international journal.

what to do with business degree: *Creative Encounters, Appreciating Difference* Sam Gill, 2018-11-15 Across the world from personal relationships to global politics, differences—cultural, religious, racial, gender, age, ability—are at the heart of the most disruptive and disturbing concerns. While it is laudable to nurture an environment promoting the tolerance of difference, *Creative Encounters, Appreciating Difference* argues for the higher goal of actually appreciating difference as essential to creativity and innovation, even if often experienced as stressful and complex. Even encounters that are apparently harmful and negatively valued (arguments, conflict, war, oppression) usually heighten the potential for creativity, innovation, movement, action, and identity. Drawing on classic encounters that have played a significant role in the founding of the academic study of religion and the social sciences, this book explores in some depth the dynamics of encounter to reveal both its problematic and creative aspects and to develop perspectives and strategies to assure encounters both include the appreciation of difference and also are recognized as creative and innovative. The two examples most extensively considered show that the academic study of the peoples indigenous to North America and to Australia involved creative constructions (concoctions) of primary examples in order to establish and give authority to academic theories and definitions. Rather than damning these examples as “bad scholarship,” this book considers them to be encounters engendering creative constructions that are distinctive to academia, yet their potential for harm must be understood. Most important to the book is a persistent development of perspectives and strategies for understanding and approaching encounters in order to assure the appreciation of difference is accompanied by the potential for creativity and innovation. Specific perspectives and strategies are related to naming, moving, gesture, and play and, particularly relevant to religion, the development of an aesthetic of impossibles. Since these historical examples engage highly relevant present concerns—the distinction of real and fake, truth and lie, map and territory—the threading essays show how these more or less classic examples might contribute to appreciating these contemporary concerns that are generated in the presence of difference.

what to do with business degree: Metrics That Matter Zachary Bleemer, Mukul Kumar, Aashish Mehta, Chris Muellerleile, Christopher Newfield, 2023-03-21 Colleges sell themselves by the numbers—rankings, returns on investments, and top-ten lists—but these often mislead prospective students. What numbers should they really be paying attention to? High school and college students are inundated by indicators and rankings supposedly designed to help them decide where to go to college and what to study once they arrive. In Metrics That Matter, coauthors Zachary Bleemer, Mukul Kumar, Aashish Mehta, Chris Muellerleile, and Christopher Newfield take a critical look at these metrics and find that many of the most popular ones are confusing, misleading, and—most importantly—easily replaceable by more helpful alternatives. Metrics That Matter explores popular metrics used by future and current college students, with chapters focusing on colleges' return on investment, university rankings, average student debt, average wages by college major, and more. Written for students, their families, and the counselors who advise them, each chapter explains a common metric's fundamental flaws when used as a basis for making important educational decisions. The authors then draw on decades of scholarship from many academic fields to pair each metric with a concrete recommendation for alternative information, both qualitative and quantitative, that would be more useful and meaningful for students to consider. They emphasize that students should be thinking beyond solely using metrics when making college decisions—students should focus on their intellectual and academic education goals, not just vocational or monetary ones. Students' reliance on certain metrics has skewed universities away from providing high-quality education and distorted the perception of higher education's purpose, overemphasizing private financial returns over the broader economic and social benefits of universities. This book aims to facilitate important student decisions while reorienting public

perceptions of higher education's values and how universities should measure their own success.

what to do with business degree: Wild Goose Moon Ben Shepperd, 2010-05 Molly Ivins, Texas columnist and wry observer of American culture, called 1968 'the year everything happened.' 1968 finds America engulfed in political and racial turmoil, assassinations, and a war seemingly without end. The year finds Tom Windham trying to deal with a few of life's basics - love, death, God, and sex. A sophomore at a conservative university in Dallas and the veteran of an upbringing in a small East Texas town, Tom sits uncomfortably on the cusp of adulthood. He is joined there by his roommate Brandeis. Along with the young women in their lives, their college friends, and their families, they experience the joys, struggles and tragedies of the year on a human scale. what to do with business degree: *Identity and Status in the Translational Professions* Rakefet Sela-Sheffy, Miriam Shlesinger, 2011-10-13 This volume contributes to the emerging research on the social formation of translators and interpreters as specific occupational groups. Despite the rising academic interest in sociological perspectives in Translation Studies, relatively little research has so far been devoted to translators' social background, status struggles and sense of self. The articles assembled here zoom in on the "groups of individuals" who perform the complex translating and/or interpreting tasks, thereby creating their own space of cultural production. Cutting across varied translatorial and geographical arenas, they reflect a view of the interrelatedness between the macro-level question of professional status and micro-level aspects of practitioners' identity. Addressing central theoretical issues relating to translators' habitus and role perception, as well as methodological challenges of using qualitative and quantitative measures, this endeavor also contributes to the critical discourse on translators' agency and ethics and to questions of reformulating their social role. The contributions to this volume were originally published in *Translation and Interpreting Studies* 4:2 (2009) and 5:1 (2010).

This book includes conversations with a wide range of successful professionals such as Ursula Burns (Xerox), Stephen Elop (Microsoft), Marius Kloppers (BHP Billiton), Ken Frazier (Merck), and Liz McCartney (The St. Bernard Project), and discusses how their career moves demonstrate elements of a game theory approach to career management.
