calculus math tutor jobs: Performing Math Andrew Fiss, 2020-11-13 Performing Math tells the history of expectations for math communication—and the conversations about math hatred and math anxiety that occurred in response. Focusing on nineteenth-century American colleges, this book analyzes foundational tools and techniques of math communication: the textbooks that supported reading aloud, the burnings that mimicked pedagogical speech, the blackboards that accompanied oral presentations, the plays that proclaimed performers' identities as math students, and the written tests that redefined "student performance." Math communication and math anxiety went hand in hand as new rules for oral communication at the blackboard inspired student revolt and as frameworks for testing student performance inspired performance anxiety. With unusual primary sources from over a dozen educational archives, Performing Math argues for a new, performance-oriented history of American math education, one that can explain contemporary math attitudes and provide a way forward to reframing the problem of math anxiety.

calculus math tutor jobs: Transforming Curriculum Through Teacher-Learner

Partnerships Nair, Pradeep, Keppell, Michael James, Lim, Chee Leong, Mari, TamilSalvi, Hassan, Nurhanim, 2020-12-11 Empowering learners for life requires a fundamental shift in higher education curriculum design. New priorities, pedagogies, technologies, spaces, and assessment strategies are required to enable learners to take ownership of their learning. "Student-centeredness" concepts are still prescriptive in nature as most decisions on curriculum, assessment, teaching, and learning approaches are still teacher-centric. Teachers are developing student-centered learning environments without the involvement of the learners in the planning, decision making, and/or design process. In addition, some lecturers are still practicing the traditional approaches of content delivery and conventional assessment methods rather than experimenting with innovative practices suited for student-centered approaches. Therefore, there is an ongoing need for research focused on the importance and effectiveness of a paradigm shift in education that involves student-teacher partnerships, fueled by innovative teaching and learning designs, where students take an active role and contribute as partners in learning. Transforming Curriculum Through Teacher-Learner Partnerships captures experiences and evidence among teachers in exploring the possibility of active student participation in curriculum design, delivery, and assessment through teacher-learner partnership. The chapters address issues of teacher-learner partnerships in designing the learning environment and how student-centered methods create resilient, adaptable, and future-capable learners. While highlighting topics within this scope such as learner autonomy, learning performance, self-efficacy, and teaching pedagogy, this book is ideally intended for teachers, administrators, teacher educators, practitioners, stakeholders, researchers, academicians, and students interested in issues related to the teacher-learner partnership.

calculus math tutor jobs: Managing the Mean Math Blues Cheryl Ooten, Emily Meek, 2003 Dear Reader, My fondest wish is that this book will assist you to succeed with math. Feel free to read it in any order that works for you. This is a book for you to control. The techniques and exercises are here to help you, not to overwhelm or discourage you. If you feel overwhelmed or discouraged, back off and return later. But do return. The rewards are many and great. I have included information I have found useful to math students during 30 years of teaching, so pick and choose. Refer to this book when you need a new and different strategy. Dawn Bigelow, a superb third-grade teacher I taught beside, told me that when she went to a conference she wanted to return with three new ideas. More than three and she would be too overwhelmed to try them. Fewer than three and she had wasted her time going to the conference. Three was the magic number. When Dawn returned to her third-graders with three new ideas, she could easily incorporate them into the classroom system she already had in progress. You have a system in progress for learning. You only need three new ideas each time you come to this book. More than that and you will be overwhelmed. Fewer than that and you will be wasting your time. Modify your learning system slowly and surely. Incorporate winning ideas and strategies that fit who you are and what you want to accomplish. Skim over the Contents. Mark the topics that look the most promising. Chapter 2, along with the list below, can direct you according to your needs. Features of this book and their purpose are: Introduction and Chapter 1: Motivation to excite you and help you gather courage to confront the blues. Chapter 2: Explanation of routes through this book based on your needs. Chapters 3-6: Effective methods to control overwhelming negative thoughts and feelings about math (or life). Chapters 7-9: Self-discovery about who you are and how you learn best. Chapters 10, 13, 14, and 15: Study skills to use in math class. Chapters 11 and 12: Discussion of shyness and classroom/teacher issues. Chapter 16: Problem-solving strategies. Chapter 17: Test-taking strategies. Pushing Your Limits, Chapters 1-17: Journal activities to help you question, ponder, plan, and evaluate your math life. Mastering Math's Mysteries, Chapters 3-6: Practice with numbers and patterns. Mastering Math's Mysteries, Chapters 7-13: Fraction practice to shore up skills that math students tend to avoid. Mastering Math's Mysteries, Chapter 15: Practice with spatial visualization. Mastering Math's Mysteries, Chapters 14, 16, and 17: Practice with strategies discussed in the chapters. More Mastering Math's Mysteries, in the Appendix: More challenging math practice for the brave of heart. Solutions to Mastering Math's Mysteries exercises, in the Appendix. This book is not designed as a math textbook but rather to accompany a math textbook or to prepare you for a math textbook. The math exercises here are just for you to wet your feet. Because I know that every math student brings different experiences and needs, I had difficulty deciding which math topics to include. I chose fractions because they are universally avoided and disliked. The potential exists for

you to feel terrific soon if you face them. Be patient with yourself as you wade into new territory. Being curious and willing to experiment can help you to swim sooner than you ever thought possible. Use a life preserver when you need it and never swim alone. My best, Cheryl Ooter
