online calculus course for credit: *Learning Online* Barbara Means, Marianne Bakia, Robert Murphy, 2014-04-03 At a time when more and more of what people learn both in formal courses and in everyday life is mediated by technology, *Learning Online* provides a much-needed guide to different forms and applications of online learning. This book describes how online learning is being used in both K-12 and higher education settings as well as in learning outside of school. Particular online learning technologies, such as MOOCs (massive open online courses), multi-player games, learning analytics, and adaptive online practice environments, are described in terms of design principles, implementation, and contexts of use. *Learning Online* synthesizes research findings on the effectiveness of different types of online learning, but a major message of the book is that student outcomes arise from the joint influence of implementation, context, and learner characteristics interacting with technology—not from technology alone. The book describes available research about how best to implement different forms of online learning for specific kinds of students, subject areas, and contexts. Building on available evidence regarding practices that make online and blended learning more effective in different contexts, *Learning Online* draws implications for institutional and state policies that would promote judicious uses of online learning and effective implementation models. This in-depth research work concludes with a call for an online learning implementation research agenda, combining education institutions and research partners in a collaborative effort to generate and share evidence on effective practices.

online calculus course for credit: Transformational Change Efforts: Student Engagement in Mathematics through an Institutional Network for Active Learning Wendy M. Smith, Matthew Voigt, April Ström, David C. Webb, W. Gary Martin, 2021-05-05 The purpose of this handbook is to help launch institutional transformations in mathematics departments to improve student success. We report findings from the Student Engagement in Mathematics through an Institutional Network for Active Learning (SEMINAL) study. SEMINAL's purpose is to help change agents, those looking to (or currently attempting to) enact change within mathematics departments and beyond—trying to reform the instruction of their lower division mathematics courses in order to promote high achievement for all students. SEMINAL specifically studies the change mechanisms that allow postsecondary institutions to incorporate and sustain active learning in Precalculus to Calculus 2 learning environments. Out of the approximately 2.5 million students enrolled in collegiate mathematics courses each year, over 90% are enrolled in Precalculus to Calculus 2 courses. Forty-four percent of mathematics departments think active learning mathematics strategies are important for Precalculus to Calculus 2 courses, but only 15 percent state that they are very successful at implementing them. Therefore, insights into the following research question will help with institutional transformations: What conditions, strategies, interventions and actions at the departmental and classroom levels contribute to the initiation, implementation, and institutional sustainability of active learning in the undergraduate calculus sequence (Precalculus to Calculus 2) across varied institutions?

online calculus course for credit: The Art of College Teaching Marilyn Kallet, April L. Morgan, 2005 Teachers everywhere are confronted with a problem. Whether at a small liberal arts college, major research university, or some other institute of learning, instructors are continually

challenged to create smart, effective pedagogical techniques in order to be efficient in the classroom. *The Art of College Teaching* is a first: twenty-eight insider essays about this process by distinguished and highly acclaimed teachers of note from across the curriculum—including eleven Carnegie national award winners—grouped here to uncover common values, approaches, and even debates among today's educators. Rather than a "rulebook" for good teaching, Professors Marilyn Kallet and April Morgan have assembled a wide variety of practitioner lore—what successful teachers have learned to do well and what they're still seeking to master. From the embarrassing to the inspirational, contributors take us inside their classrooms to explain the "light-bulb moments" that form the bases of their teaching philosophies, making this collection reader-friendly, often humorous, and very real. Contributors take up a broad range of subjects: setting boundaries with students; teaching as performance; the pros and cons of lecture versus "active" learning; gaining students' respect and keeping it; creativity in the classroom; encouraging diversity; and many others. The interdisciplinary approach allows for a stimulating mix of voices and kinds of expertise, from "takes on teaching" by Nobel Prize Laureate James Buchanan to coaching strategies from champion ice-skating instructor Robert Unger. Theories about the "right" way to teach abound, but like any art, teaching isn't easily defined by guidelines or prevailing wisdom. A narrative, experiential approach to one of our most rewarding and demanding disciplines, *The Art of College Teaching* is a book to be of use. It is a handbook of ideas that will empower new teachers and refresh those who have been in the trenches for years.

online calculus course for credit: **Comparative Theology in the Millennial Classroom** Mara Brecht, Reid B Locklin, 2015-12-07 This volume explores the twenty-first century classroom as a uniquely intergenerational space of religious disaffiliation, and questions about how our work in the classroom can be, and is being, re-imagined for the new generation. The culturally hybrid identity of Millennials shapes their engagement with religious others on campus and in the classroom, pushing educators of comparative theology to develop new pedagogical strategies that leverage ways of seeing and interacting with their teachers and classmates. Reflecting on religious traditions such as Islam, Judaism, African Traditional Religions, Hinduism, Christianity, and agnosticism/atheism, this volume theorizes the theological outcomes of current pedagogies and the shifting contours of comparative theological discourse.

online calculus course for credit: **The Well-Trained Mind** Susan Wise Bauer, Jessie Wise, 2016-08-09 Is your child getting lost in the system, becoming bored, losing his or her natural eagerness to learn? If so, it may be time to take charge of your child's education—by doing it yourself. *The Well-Trained Mind* will instruct you, step by step, on how to give your child an academically rigorous, comprehensive education from preschool through high school—one that will train him or her to read, to think, to understand, to be well-rounded and curious about learning. Veteran home educators Susan Wise Bauer and Jessie Wise outline the classical pattern of education called the trivium, which organizes learning around the maturing capacity of the child's mind and comprises three stages: the elementary school "grammar stage," when the building blocks of information are absorbed through memorization and rules; the middle school "logic stage," in which the student begins to think more analytically; and the high-school "rhetoric stage," where the student learns to write and speak with force and originality. Using this theory as your model, you'll be able to instruct your child—whether full-time or as a supplement to classroom education—in all levels of reading, writing, history, geography, mathematics, science, foreign languages, rhetoric, logic, art, and music, regardless of your own aptitude in those subjects. Thousands of parents and teachers have already used the detailed book lists and methods described in *The Well-Trained Mind* to create a truly superior education for the children in their care. This extensively revised fourth edition contains completely updated curricula and book lists, links to an entirely new set of online

resources, new material on teaching children with learning challenges, cutting-edge math and sciences recommendations, answers to common questions about home education, and advice on practical matters such as standardized testing, working with your local school board, designing a high-school program, preparing transcripts, and applying to colleges. You do have control over what and how your child learns. The Well-Trained Mind will give you the tools you'll need to teach your child with confidence and success.
