summer calculus classes near me: Research Connections Abra Brisbin, Karen Lange, Erin McNicholas, Emilie Purvine, 2025-02-18 What does math research really look like? Which subfield is right for me? Do people like me go to graduate school, and succeed? This book provides students a "sneak preview" of math research in a variety of subfields. Each chapter features the work of a different mathematician along with enough background material for an advanced undergraduate or early graduate student to understand the key ideas and get a sense for the styles of thinking involved in each subfield. Each chapter is prefaced by a short biography of the mathematician who wrote the chapter (all people connected to the Carleton College Summer Math Program for Women),

providing advice and examples of paths from undergraduate education, through graduate school and beyond. This book provides a source of ideas and starting points for in-class projects, independent studies, and student talks as well as supplementary reading in courses. The profiles of early career mathematicians and statisticians at the beginning of each chapter are valuable as an advising resource for students considering graduate school, or to show students a diverse view of modern mathematicians in a "Math for Liberal Arts"-style course.

summer calculus classes near me: *Blood Games* Jerry Bledsoe, 2014-05-18 The New York Times bestselling author of *Bitter Blood* weaves "a powerful account" of greed that led to an unspeakable crime (The New York Times Book Review). As they slept in their North Carolina home, wealthy Lieth Von Stein and his wife Bonnie suffered a vicious assault with a knife and a baseball bat. Bonnie barely survived. Lieth did not. The crime seemed totally baffling until police followed a trail that led to the charming stepson, Chris Pritchard, and his brilliant, drug-using, Dungeons and Dragons-playing friends at North Carolina State University. "Haunting . . . Addictive, chilling and a masterpiece of reportage," *Blood Games* is the true story of depraved young minds and a son's gruesome greed turned to horrifyingly tragedy (Patricia Cornwell). Jerry Bledsoe masterfully reconstructs the bloody crime and its aftermath as he takes us into the secret twisted hearts of three young murderers. "Mr. Bledsoe goes straight to the bigger issues." —The New York Times Book Review "In Mr. Bledsoe's hands, a mega-load of inert facts becomes a human story of hurricane force." —The News & Observer "Devastating . . . A brilliant account." —Publishers Weekly

summer calculus classes near me: *The Latinos of Asia* Anthony Christian Ocampo, 2023-05-25 This groundbreaking book . . . is essential reading not only for the Filipino diaspora but for anyone who cares about the mysteries of racial identity (Jose Antonio Vargas, Pulitzer Prize-winning journalist). Is race only about the color of your skin? In *The Latinos of Asia*, Anthony Christian Ocampo shows that what color you are depends largely on your social context. Filipino Americans, for example, helped establish the Asian American movement and are classified by the US Census as Asian. But the legacy of Spanish colonialism in the Philippines means that they share many cultural characteristics with Latinos, such as last names, religion, and language. Thus, Filipinos' color—their sense of connection with other racial groups—changes depending on their social context. The Filipino story demonstrates how immigration is changing the way people negotiate race, particularly in cities like Los Angeles where Latinos and Asians now constitute a collective majority. Amplifying their voices, Ocampo illustrates how second-generation Filipino Americans' racial identities change depending on the communities they grow up in, the schools they attend, and the people they befriend. Ultimately, *The Latinos of Asia* offers a window into both the racial consciousness of everyday people and the changing racial landscape of American society.

summer calculus classes near me: *The Seven Year-Old Pilot* Capt. Steven Archille, 2012-03-23 Flying has been my dream since before I can remember... literally. My Aunt Odette tells me that when I was three years old, she took me with her to the Port-au-Prince International Airport to pick someone up, and when I saw an airliner up close for the first time, I excitedly yelled out, I want to drive that! I don't recall that event, but it serves as evidence that my fascination with flying began at a remarkably young age. My first memory of wanting to fly came a few years later at the age of seven. I was on my very first flight, from Port-au-Prince to New York City, where I was going to start a new life in a new country. I remember looking at all the people boarding the airplane and wondering how that big silver bird was going to get us into the air (that silver bird was an American Airlines Boeing 727). To this day, the whole experience is vivid in my mind: being greeted with a smile by the captain at the aircraft entry door, the funny feeling in my stomach as the plane accelerated down the runway, leaping into the air, and my utter disbelief that we didn't drop out of the sky! I was mesmerized by it all, and by the time the plane came to a stop at our gate, my dream had been born... I wanted to become an airline pilot. I have been blessed to be living that dream since 1999. It's a dream from which I hope never to awaken. This is the story of the lifelong journey I have taken in realizing that dream. I invite you to come along with me as we go from my birth in Haiti to the present day, as I live my dream every day. You will come with me as I move to America

at the age of seven, a country I knew nothing about and whose language I didn't speak, a land that would truly prove to be the land of opportunity. You will feel my sense of wonder and bewilderment growing up in New York City, trying to understand my new world. You will face my struggles to fit in with the kids in the housing project where my family lived for a decade as Mom and Dad saved money to buy a house. You will meet my parents, who encouraged my dream of flying, and my fifth grade teacher who helped me to see that it was possible not only to dream it, but also to achieve it. It's a story of potential fulfilled, and my family's sacrifices to get me through college and flight school. You will fly with me from my first lesson to my first airline job as a copilot, to the day I earned my four-stripes and first heard someone call me Captain. You will sit with me in the captain's seat as I fly an airline jet over Haiti for the first time, looking down from thirty-eight thousand feet onto the land of my birth where my dream had been born. You will soar with me over the majestic Amazon jungle in Brazil, over the desert-flanked Nile River in Egypt, and the sparkling Mediterranean Sea. You will fly with me through New York City blizzards, Indian monsoons, and Arabian sandstorms. You will travel with me on adventures to Europe, South America, the Middle East, South Asia, the Caribbean, and other parts of the world I used to dream of going to as a child; places that have affected me profoundly and where I left a little part of myself. I have seen all these things through the eyes of the seven year-old boy from Haiti that I was and in many ways, still am; the little boy who had a sense of just how incredible the world and life are, who dreamt of a life of worldwide adventure, and was blessed to have his dream come true. That is the reason for the title of this book, *The Seven Year-Old Pilot*, because even after years of flying around the world, in many ways, I still feel like that little boy, and I always try to approach my travels and my life with his sense of gratitude, amazement, and awe. I truly believe that every one of us has life experiences and lessons worth sharing that can inspire, enlighten, teach, and benefit others because we have all liv

summer calculus classes near me: Sky Ranch Linda M. Lockwood, 2025-07-30 For fans of Tara Westover's Educated and Ivan Doig's This House of Sky comes a memoir about a girl's isolated ranch childhood—and her adulthood journey to overcome grief and fear and discover the truth about her mother's mental illness. At the age of eight, Linda Lockwood moves with her family to an isolated ranch in eastern Washington State. Within two years, she's patrolling the ranch on horseback alongside her border collie—herding sheep, killing rattlesnakes, and defending the ranch's livestock from coyotes, bears, and even trespassing hunters—and working tirelessly to realize her dream of training horses. But her most daunting challenge is one hard work can't overcome: her mother is descending into madness. And Linda's deepest fear is that she might inherit the schizophrenia that threatens to dismantle her family. At age twenty-five, Linda marries, but the joy of her first pregnancy is darkened by her mother's suicide. Then she endures a painful miscarriage and the death of her beloved grandmother, traumatic events that send her back in time to the births and deaths of animals—domesticated and wild—that she loved in childhood. Eventually, her own family grows, but her happiness is haunted by questions people have tiptoed around all her life. How did her mother become schizophrenic? What did she endure as a patient in 1960s mental hospitals? Might Linda and even her children be next to battle that catastrophic mental disorder? Driven by the courage and will she sharpened as a rancher, Linda vows to find out.

summer calculus classes near me: Talking about Leaving Revisited Elaine Seymour, Anne-Barrie Hunter, 2019-12-10 Talking about Leaving Revisited discusses findings from a five-year study that explores the extent, nature, and contributory causes of field-switching both from and among “STEM” majors, and what enables persistence to graduation. The book reflects on what has and has not changed since publication of Talking about Leaving: Why Undergraduates Leave the Sciences (Elaine Seymour & Nancy M. Hewitt, Westview Press, 1997). With the editors’ guidance, the authors of each chapter collaborate to address key questions, drawing on findings from each related study source: national and institutional data, interviews with faculty and students, structured observations and student assessments of teaching methods in STEM gateway courses. Pitched to a wide audience, engaging in style, and richly illustrated in the interviewees’ own words, this book affords the most comprehensive explanatory account to date of persistence, relocation and loss in undergraduate sciences. Comprehensively addresses the causes of loss from undergraduate STEM majors—an issue of ongoing national concern. Presents critical research relevant for nationwide STEM education reform efforts. Explores the reasons why talented undergraduates abandon STEM majors. Dispels popular causal myths about why students choose to leave STEM majors. This volume is based upon work supported by the Alfred P. Sloan Foundation Award No. 2012-6-05 and the National Science Foundation Award No. DUE 1224637.
