pre calculus online course free: Learning Online Barbara Means, Marianne Bakia, Robert Murphy, 2014-04-03 At a time when more and more of what people learn both in formal courses and in everyday life is mediated by technology, Learning Online provides a much-needed guide to different forms and applications of online learning. This book describes how online learning is being used in both K-12 and higher education settings as well as in learning outside of school. Particular online learning technologies, such as MOOCs (massive open online courses), multi-player games, learning analytics, and adaptive online practice environments, are described in terms of design principles, implementation, and contexts of use. Learning Online synthesizes research findings on the effectiveness of different types of online learning, but a major message of the book is that student outcomes arise from the joint influence of implementation, context, and learner characteristics interacting with technology—not from technology alone. The book describes available research about how best to implement different forms of online learning for specific kinds of students, subject areas, and contexts. Building on available evidence regarding practices that make online and blended learning more effective in different contexts, Learning Online draws implications for institutional and state policies that would promote judicious uses of online learning and effective implementation models. This in-depth research work concludes with a call for an online learning implementation research agenda, combining education institutions and research partners in a collaborative effort to generate and share evidence on effective practices.

pre calculus online course free: *Creative Learning and MOOCs* Haifa Jamal Al-Lail, Nabil Sultan, 2015-10-13 This volume brings together a collection of selected (and revised) articles that were presented at the 11th Learning and Technology Conference held by Effat University in Jeddah, Saudi Arabia, in February 2014. The conference is an annual event that explores the latest research and practice in innovative technologies and their impact on education. The contributions to this volume are all authored by practicing academics and research students, with the central theme the realisation that learning and teaching are strongly influenced by technology and innovation. Schools, colleges and academic institutes took the lead in harnessing this technology and created innovative opportunities for learning that did not exist before, one of which being the field of e-Learning. One of the latest innovations in education is the introduction of Massive Open Online Courses (MOOCs), which represents an interesting development in the use of technology and innovation by providing opportunities for learning to massive numbers of students (regardless of their location) at almost no cost. This phenomenon is subject to a great deal of analysis in this book, and will provide an interesting read for students, teachers, decision makers and ordinary people. A particular strength of this book is that the contributors are drawn from, and represent, a number of cultural backgrounds, which provides a range of insights that is often missing from other publications on such important subjects.
