Steven was born on a planet named Provender a world literally created by the Torill, a flesh eating race from another Galaxy. His descendants were brought to Provender by the Torill to proliferate and multiply into enough live flesh to sustain the Torill when they returned 200 years later to again take on the once mighty Froellian peace keepers of the Milky Way. The Torill were not the immediate problem, saving his Clan from those on Provender who had declared they would defeat and then annihilate Steven and his once mighty Blackwatch Clan was. Jakes home world is Earth, hed lived a sheltered life for most of his 25 years, that is until he discovered that Earth was going to be struck by not one, but two asteroids that could easily destroy the human race. What-ifs are explored in Provender, such as what if we are not alone or what if Earth is struck by an asteroid, and What if two humans with drive and determination, and who share the same ancestors, find each other? What then? Are humans capable, or even worthy of existing at all in the Milky Way Galaxy? Can a fledgling species just beginning its move into space unite the people of other worlds in time to stop the annihilation of an entire Galaxy by a superior force empowered by vengeance and a historical need to eat living sentient flesh? Follow Steven and Jake McClain as they discover that the Universe does not revolve around their respective worlds. That there are many sentient civilized worlds that discovered that fact long before sentient life walked on Earth.

Further exploration of these technologies integration in government may provide insights into their role in

enhancing public service delivery, citizen engagement, and administrative efficiency. Harnessing AI, Blockchain, and Cloud Computing for Enhanced e-Government Services delves into the transformative potential of modern technologies in reshaping government services. It explores how AI, blockchain, and cloud computing are driving the evolution of e-government, enabling more efficient, transparent, and value-added services across various public sectors. This book covers topics such as political science, cybersecurity, and public sectors, and is a useful resource for data scientists, computer engineers, government officials, policymakers, business owners, researchers, and academicians.
