Equilibrium Constants (K_c , K_p)

Students learn how to express equilibrium in terms of concentration (K_c) and partial pressure (K_p). The relationship between these constants and reaction quotients is also explored.

Le Châtelier's Principle

This principle predicts how a system at equilibrium responds to changes in concentration, temperature, and pressure. It provides a qualitative understanding of shifts in equilibrium positions.

Solubility Equilibria

The syllabus includes the study of sparingly soluble salts and the application of solubility product constants (K_{sp}) to predict precipitation and dissolution phenomena.

- Establishing and interpreting equilibrium expressions
- Quantitative problem solving involving equilibrium concentrations
- Factors affecting equilibrium position
