allied universal job training: The Road to Universal Health Coverage Jeffrey L. Sturchio, Ilona Kickbusch, Louis Galambos, 2019-01-15 How can countries chart their own course toward universal health coverage? Like many ambitious global goals, universal health coverage (UHC) remains an aspiration for many countries. The World Health Organization estimates that half the world's population lacks access to basic health services. Moreover, this already staggering number masks inequities that exist between and within countries: gaps between rich and poor, men and women, young and old, and among people of different ethnic backgrounds. UHC promises to give all people greater access to higher quality health services without the fear of financial hardship. But the task of turning this vision into reality poses a significant challenge for countries at all stages of economic development. In The Road to Universal Health Coverage, Jeffrey L. Sturchio, Ilona Kickbusch, Louis Galambos, and their contributors explore the ways in which the private sector is already helping countries achieve universal health coverage. Stressing the many positive aspects of UHC developments, the book focuses on the new health economy and the sometimes controversial dimensions of the private sector helping countries achieve UHC. Theoretical chapters are complemented by a series of case studies that explore the myriad ways in which private sector actors are already addressing UHC. What are the conditions required for countries to translate their successful experiences and policy promises into practical results for improved population health? In answering this question, the contributors examine the relationship between health employment and economic growth. They also analyze the critical success factors for private sector engagement in

UHC, the role of healthy women in creating and sustaining healthy economies, and the role of the pharmaceutical sector. Looking to the political, economic, and social implications of moving from aspiration to implementation, *The Road to Universal Health Coverage* points the way to the many opportunities ahead as companies continue to work with governments and civil society partners to help achieve UHC. allied universal job training: Ethics and the Profession of Anthropology Carolyn

Fluehr-Lobban, 2003 This revised second edition of *Ethics and the Profession of Anthropology* renews the challenge to anthropologists to engage in a dialogue concerning their commitment to professional ethical conduct. Containing a majority of new chapters, the authors redefine what it means to conduct anthropological research ethically in a discipline that is now less isolated from allied fields in the physical and behavioral sciences and coming to terms with the global changes that affect its practice. Fluehr-Lobban provides an overview of issues from the past 110 years, drawing attention to the need for maintaining the ethical core of the discipline and a code of professional responsibility. The contributors describe a series of crises in the discipline involving clandestine research and other questionable actions by anthropologists, including secret research and intelligence work by academics; the ethical problems of medical work among native people; the evolution of cyber-ethics; and the changing relationships between indigenous people, archaeologists and museums as a result of the 1990 NAGPRA repatriation legislation. The book offers an excellent model for integrating ethics education at all levels of instruction and for empowering and engaging communities. It will be a valuable tool for anthropological researchers, instructors and fieldworkers as they transform their professional practice.

allied universal job training: Human Factors Issues in Combat Identification Robert Herz, Dee Andrews, Mark Wolf, 2017-09-29 This edited book presents an array of approaches on how human factors theory and research addresses the challenges associated with combat identification. Special emphasis is placed on reducing human error that leads to fratricide, which is the unintentional death or injury of friendly personnel by friendly weapons during an enemy engagement. Although fratricide has been a concern since humans first engaged in combat operations, it gained prominence during the Persian Gulf War. To reduce fratricide, advances in technological approaches to enhance combat identification (e.g., Blue Force Tracker) should be coupled with the application of human factors principles to reduce human error. The book brings together a diverse group of authors from academic and military researchers to government contractors and commercial developers to provide a single volume with broad appeal. *Human Factors Issues in Combat Identification* is intended for the larger human factors community within academia, the military and other organizations that work with the military such as government contractors and commercial developers as well as others interested in combat identification issues including military personnel and policy makers.
