arnoldus montanus america 1671: *Beaverland* Leila Philip, 2022-12-06 An intimate and revelatory dive into the world of the beaver—the wonderfully weird rodent that has surprisingly shaped American history and may save its ecological future. From award-winning writer Leila Philip, *Beaverland* is a masterful work of narrative science writing, a book that highlights, through history and contemporary storytelling, how this weird rodent plays an oversized role in American history and its future. She follows fur trappers who lead her through waist high water, fur traders and fur auctioneers, as well as wildlife managers, PETA activists, Native American environmental vigilantes, scientists, engineers, and the colorful group of activists known as beaver believers. Beginning with the early trans-Atlantic trade in North America, Leila Philip traces the beaver's profound influence on our nation's early economy and feverish western expansion, its first corporations and multi-millionaires. In her pursuit of this weird and wonderful animal, she introduces us to people whose lives are devoted to the beaver, including a Harvard scientist from the Blackfeet Reservation in Montana, who uses drones to create 3-dimensional images of beaver dams; and an environmental restoration consultant in the Chesapeake whose nickname is the "beaver whisperer". What emerges is a poignant personal narrative, a startling portrait of the secretive world of the contemporary fur trade, and an engrossing ecological and historical investigation of these heroic animals who, once trapped to the point of extinction, have returned to the landscape as one of the greatest conservation stories of the 20th century. Beautifully written and impeccably researched, *Beaverland* reveals the profound ways in which one odd creature and the trade surrounding it has shaped history, culture, and our environment. arnoldus montanus america 1671: Travel and Translation in the Early Modern Period ,
2006-01-01 The relationship between travel and translation might seem obvious at first, but to study it in earnest is to discover that it is at once intriguing and elusive. Of course, travelers translate in order to make sense of their new surroundings; sometimes they must translate in order to put food on the table. The relationship between these two human compulsions, however, goes much deeper than this. What gets translated, it seems, is not merely the written or the spoken word, but the very identity of the traveler. These seventeen essays—which treat not only such well-known figures as Martin Luther, Erasmus, Shakespeare, and Milton, but also such lesser known figures as Konrad Grüneberg, Leo Africanus, and Garcilaso de la Vega—constitute the first survey of how this relationship manifests itself in the early modern period. As such, it should be of interest both to scholars who are studying theories of translation and to those who are studying “hodieporics”, or travel and the literature of travel.

By focusing on books, newspapers, learned journals, and pamphlets, Trude Dijkstra sheds new light on the cultural encounter between China and western Europe in the early modern period. Form, content, and material-technical aspects of different media in Dutch and French are analysed, providing novel insights into the ways in which readers could take note of Chinese religion and philosophy. This study thereby demonstrates that there was no singular image of China and its religion and philosophy, but rather a varied array of notions on the subject.
