apex learning answers: **Early Warning Systems and Targeted Interventions for Student Success in Online Courses** Glick, Danny, Cohen, Anat, Chang, Chi, 2020-06-26 Online learning has increasingly been viewed as a possible way to remove barriers associated with traditional face-to-face teaching, such as overcrowded classrooms and shortage of certified teachers. While online learning has been recognized as a possible approach to deliver more desirable learning outcomes, close to half of online students drop out as a result of student-related, course-related, and out-of-school-related factors (e.g., poor self-regulation; ineffective teacher-student, student-student, and platform-student interactions; low household income). Many educators have expressed concern over students who unexpectedly begin to struggle and appear to fall off track without apparent reason. A well-implemented early warning system, therefore, can help educators identify students at risk of dropping out and assign and monitor interventions to keep them on track for graduation. Despite the popularity of early warning systems, research on their design and implementation is sparse. *Early Warning Systems and Targeted Interventions for Student Success in Online Courses* is a cutting-edge research publication that examines current theoretical frameworks, research projects, and empirical studies related to the design, implementation, and evaluation of early warning systems and targeted interventions and discusses their implications for policy and practice. Moreover, this book will review common challenges of early warning systems and dashboard design and will explore design principles and data visualization tools to make data more understandable and, therefore, more actionable. Highlighting a range of topics such as curriculum design, game-based learning, and learning support, it is ideal for academicians, policymakers, administrators, researchers, education professionals, instructional designers, data analysts, and students.

apex learning answers: **Learning to Survive** Mneesha Gellman, 2025-11-18 Traces the experiences of Yurok high school students and educators as they navigate between Native and non-Native spaces *Learning to Survive* explores how Native American youth are impacted by formal educational experiences, through the insights of students and teachers working to revitalize the Yurok language. Sharing stories of Native American resilience amidst toxic school and community cultures, Mneesha Gellman examines the consequences of the misrepresentation and suppression of Indigenous culture in secondary education. Through personal testimonies and interviews from

Northern California high schools, Gellman traces the experiences of students as they navigate their own identities between Native and non-Native spaces, and of educators who relate their efforts in providing their students with not just language instruction, but a sense of support and community that goes beyond the classroom. Students and teachers alike detail how they struggle to thrive under systems of white supremacy while protecting and preserving their identity and culture, particularly through the work of language education and language-keeping. *Learning to Survive* highlights the profound harm done by perpetuating White supremacy and the importance of investing in culturally sustaining curricula. Youth well-being suffers when students are faced with hostile school environments and when they do not see themselves or their communities truthfully or positively represented in curricula. This book calls on adults—policymakers, teachers, families, and others—to consider what changes we can and should make in our daily work to promote Native American well-being in schools.

apex learning answers: *Essential Readings in Management Learning* Christopher Grey, Elena Antonacopoulou, 2004-09-28 This volume brings together some of the best writing published in the journal *Management Learning* since its re-launch under this title in 1994. The selection very much reflects the mission of the journal to act as a showcase for innovative, international and interdisciplinary work which covers a wide gamut of issues connected to management, organizations, learning and knowledge. The field of management learning, widely drawn in this way, brings together some of the key preoccupations within several areas of management, organization studies and social science more generally. Learning and knowledge have become central themes within these areas for several reasons, both practical and theoretical. These include the way that organizational learning is seen as a key source of competitive advantage, and the wider analysis that individuals and organizations now inhabit a 'knowledge economy'. Theoretically, recent years have seen emerging understandings of the social significance of 'communities of practice', whilst learning in its many manifestations is increasingly seen as being imbricated in issues of power. This latter points to one of the particular areas which has been a focus for the journal, namely more critically orientated approaches to management learning. This collection provides readings grouped under six key headings which reflect where some of the most influential and provocative work in the field has been done over recent years, namely: - Organizational Learning and Learning Organizations - Individual Learning - Critical Approaches to Management Education and Learning - Pedagogical Practice - Globalization and Management Learning - Beyond Management Learning Along with an editorial introduction, this volume will provide a unique and invaluable resource for anyone studying or researching management learning and cognate areas, by bringing together some of the best peer-reviewed work in the field.

There is a rapidly growing interest in, and demand for open and distance learning solutions for schools, not only in terms of improving access (for example, for the children of travellers, or for those in geographically remote areas) but also in terms of improving pedagogy for more 'conventional' teaching, by offering teachers, parents and pupils greater support and access to learning materials and resources. This ground-breaking book, with contributions from around the world including the UK, US, New Zealand, Canada and India, looks at the key areas of development in this new field, provides best practice examples and inspiring case studies and will increase the awareness of the opportunities and challenges in this potentially huge field.

apex learning answers: Neuro-Systemic Applications in Learning Kennedy Andrew Thomas, Joseph Varghese Kureethara, Siddhartha Bhattacharyya, 2021-09-01 Neuroscience research deals with the physiology, biochemistry, anatomy and molecular biology of neurons and neural circuits and especially their association with behavior and learning. Of late, neuroscience research is playing a pivotal role in industry, science writing, government program management, science advocacy, and education. In the process of learning as experiencing knowledge, the human brain plays a vital role as the central governing system to map the images of learning in the human brain which may be called educational neuroscience. It provides means to develop a common language and bridge the gulf between educators, psychologists and neuroscientists. The emerging field of educational neuroscience presents opportunities as well as challenges for education, especially when it comes to assess the learning disorders and learning intentions of the students. The most effective learning involves recruiting multiple regions of the brain for the learning task.
