ap government textbook online: Technology in Retrospect Richard A. Diem, Michael J. Berson, 2010-06-01 January 2009 marked the 25th anniversary of one of the most famous three minutes of television history. It was during half-time of the 1984 Super Bowl that APPLE show cased its new Macintosh Computer in an avant-guard commercial. In the following three weeks sales of the new computer, in both the public and private sectors, took off leading some to note this occasion as the true start of the information age. At the same time schools joined this so-called information revolution and began to use the new technology, in various forms, in a much more serious manner. Given both the changing nature of technology, as well as its classroom applications, over the past quarter century this work's goal is to capture the historical trends of both use and application of information technology in the social studies during this era. This is done by providing a retrospective view , from 1984 through 2009 , of where we've been, where we are, and a view of new tools and strategies and possible studies that are emerging that can enhance our understanding of the effects that technology has and will have on the social studies.

ap government textbook online: Oxford Textbook of Global Public Health Roger Detels, Martin Gulliford, Quarraisha Abdool Karim, Chorh Chuan Tan, 2015-02-26 The Oxford Textbook of Global Public Health is the ultimate resource on the subject of public health and epidemiology. The sixth edition has been thoroughly revised and updated, offering a global and comprehensive perspective on wide ranging public health needs and priorities in modern health care. The sixth edition retains its approach of dividing the complex, dynamic subject of public health into three topics. 'The Scope of Public Health' discusses the development of the discipline, determinants of health and disease, public health policies, and law and ethics. Next, the textbook focuses on 'The Methods of Public Health', including the main science behind the discipline - epidemiology. Finally, 'The Practice of Public Health', examines specific public health problems and the options for prevention and control. As well as identifying these issues by system or disease, there is also an awareness of the unique needs of particular population groups. New topics in this edition include: Climate change, genetic testing and epidemiology; new methods for measuring the burden of disease; life course approaches to epidemiology, behavioural economics; and physical activity, health and wellbeing. Two new editors, Quarraisha Abdool Karim (South Africa) and Chorh Chuan Tan (Singapore), join the established editor team of Roger Detels (USA), and Martin Gulliford (UK), representing a truly global outlook. The contributors are experts who have been drawn from around the world, offering perspectives from vastly different health systems with ranging public health needs and priorities. The Oxford Textbook of Global Public Health remains the most comprehensive, accessible text in the field, and is an essential reference for students and practitioners in public health and epidemiology.
