Framed throughout as 'gerontological hygiene', this book examines contemporary regimes, strategies and treatment protocols deployed throughout Australia, the United States, and the United Kingdom. The book deploys critical cultural theories such as biopolitics, somatechnics, ethics, and governmentality to examine how anti-aging technologies operate to problematise the aging body as always-already diseased, and how these come to constitute a movement of abolition, named here as 'gerontological hygiene'.

beast academy 1a age: Book of Beasts Elizabeth Morrison, 2019 A celebration of the visual contributions of the bestiary--one of the most popular types of illuminated books during the Middle Ages--and an exploration of its lasting legacy. Brimming with lively animals both real and fantastic, the bestiary was one of the great illuminated manuscript traditions of the Middle Ages. Encompassing imaginary creatures such as the unicorn, siren, and griffin; exotic beasts including the tiger, elephant, and ape; as well as animals native to Europe like the beaver, dog, and hedgehog, the bestiary is a vibrant testimony to the medieval understanding of animals and their role in the world. So iconic were the stories and images of the bestiary that its beasts essentially escaped from the pages, appearing in a wide variety of manuscripts and other objects, including tapestries, ivories, metalwork, and sculpture. With over 270 color illustrations and contributions by twenty-five leading scholars, this gorgeous volume explores the bestiary and its widespread influence on medieval art and culture as well as on modern and contemporary artists like Pablo Picasso and

Damien Hirst. Published to accompany an exhibition on view at the J. Paul Getty Museum at the Getty Center May 14 to August 18, 2019.

beast academy 1a age: The New Pediatrics Dorothy Pawluch, 2017-07-05 When antibiotics became readily available in the 1950s, the danger of life-threatening infectious childhood diseases virtually disappeared. In that era, pediatricians broadened the core professional task of their specialty--the prevention and treatment of such diseases--to incorporate the behavioral and psychosocial problems of children and adolescents. Pediatricians themselves began to refer to this changing emphasis as the new pediatrics, and to see the trend as a natural progression of their specialty into new areas of care. At the same time there arose widespread disaffection among practicing general pediatricians, defection to other areas of practice, and a decline in the popularity of pediatrics as a specialty choice. In analyzing the emergence of the new pediatrics as a case study within medical sociology, Pawluch shows how professional concerns and interests influence debate around social problems. As sociologists began to take greater interest in the problems of childhood, and as children's lives became increasingly medicalized--as some have argued--it is at least in part because of pediatricians' willingness to endorse medical definitions for certain social problems and to provide treatment for them. Pawluch's underlying concern is that medical professionals have begun to make claims for authority in the definition of what constitutes the social problems of childhood. Among the topics she examines are the dissatisfied pediatrician syndrome, the potential for a crisis in oversupply of pediatricians and competing providers of services, the push for expansion into new areas of care, and possible future developments in this specialty.
